Thanks to all who donated time and money to the Amsat Phase 3d project in 1995. Time before launch is getting short, and donations are still needed. Do what you can in 1996 to help us get the Phase 3D satellite off the ground.

Thanks 73, & Happy new year!

kb7adl@amsat.org

I have used both beams and 5/8 wave verticals for RS-10. For the beginner
and budget-limited, verticals work well. They have a higher noise-level and won't
DX as well. But while learning to handle doppler you don't want to divert brain-power
to moving the beam also. Beams and rotors cost a lot more also. I worked RS-10 for
1-1/2 years with verticals. Now I have beams, both AZ & EL types, and find the
plain old horizontal beam works fine without the need for a third hand to control the
rotors.

4. Satracker 4 Satellite Antenna Control device

Newsgroup: rec.radio.amateur.space
Date: 1996-01-01 00:00:00 UTC
From: durham@lobby.ti.com
Message-ID: <4c94e2$2g7@superb.csc.ti.com>
Source record: 23271

This system has been recommended as an optimum solution
to satellite antenna aiming and automatic transceiver tuning
for doppler compensation. There are no ads or descriptions in
any of the recent Ham magazines. Does anyone know if cables for
interface to the G-5400B rotors and the FT736 transceiver are
included with the package? The system is described as a stand
alone box that does not require computer interface. Does this
mean that the Keps have to be loaded somehow by hand? Could the
box be interfaced to the computer to load the Keps file?

Any information about this or similar devices would be
useful. I'm running out of hands to tune the radio, aim antennas,
hold my beer bottle, and write down call signs.

> DL0ART/am - The Nienberge Amateur Radio Group (Germany) plans
> another balloon launch on monday, 01-01-96.

I forgot the words "weather permitting" - and that is not the case.
The balloon has to stay below the clouds, and on 01-01-96 that would
mean below 1,000 ft. Of course, that doesn't make too much sense, so
the launch will be postponed. All the equipment is ready for launch,
so we hope that will be able to start on

sunday, 01-07-96

We'll decide about that friday night, and if we do it, another
announcement will follow.

Best 73,
Oliver

Jeff,

I believe that STS-72 is going first or second week of Jan. I can double check when I get to work on Tuesday.

As for NASA Select, I believe it probably is shutdown do to gov work stopage. I don't know what NASA center it orginates from.

I work for one of the contractors at Goddard and we are still working, or at least till Jan 15, 1996 when our funding runs out.

Message-ID: <4c8afg$qc6@usenet1.interramp.com>
Source record: 23276

As you can see from the first two replies your not going to be able to decode Hubble's data. But if your still interested in the frequencies they are:

Downlink: 2255.5 MHz or 2287.5 MHz (plus or minus 10 MHz).

But as the others have said, this link goes to the Tracking and Data Relay Satellite (TDRS) and then to the ground. So a direct signal from Hubble is not possible but in emergency conditions.

>Does anyone have the heard/worked lists for STS-74?

not for quite some time!

With a voice-only SAREX mission somebody has to manually transcribe each of the audio tapes, listening for call signs and entering them in to a database.

With a couple of extremely active hams on board (Bill McArthur KC5ACR, Chris Hadfield VA3OOG, and Ken Cameron KB5AWP) there were certainly *lots* of voice contacts made, and it's going to take a while for some volunteer to transcribe those tapes.

January 11th 4:18 am Eastern Time - ought to be a nice night launch. Since this mission is a grounds-up rendezvous the window moves forward by about 30 minutes each day to match the plane of SFU's orbit. (SFU = Space Flyer Unit, the Japanese freeflyer which will be returned in the shuttle's cargo bay).

>Oh, BTW. What happend to NASA Select?

NASA TV is shutdown due to the government furlough. Only critical government functions have been permitted during the furlough - which fortunately includes preparing STS-72 for launch and the downstream missions. If you look on Spacenet 2 Transponder 3 (channel 5) you can occasionally see some engineering video, or a scrambled signal.

Last week's launch of a Delta with the X-Ray Timing Explorer spacecraft was the only NASA launch in a *long* time not to be carried live via satellite. There were about three NASA public affairs working that day - in comparison with the dozen or so for a typical launch.

I checked and the contractor personnel who operate the satellite uplink facilities would have been available - even though it was during the end-of-year holidays, however the decision was made that the launch of an uncrewed rocket did not justify the satellite uplink as a critical government function.

SPARTAN PACKET RADIO EXPERIMENT (SPRE)

Setup Information for Participating School Ground Stations

By: Ken McCaughey (N3FZX)
File: school01.txt
Date: 20-DEC-95

1.0 INTRODUCTION

The Spartan Packet Radio Experiment (SPRE) is open to amateur radio operators and schools who want to participate. This document will guide you in your preparations for the SPRE mission. Included are some guidelines that will help you to determine if you can hear SPRE and what level of equipment you will need. Please read this document thoroughly. If you have any additional questions please contact the SPRE Project (see Section 10.0).

2.0 MISSION PROFILE

SPRE is one of four experiments on-board NASA Goddard's Spartan OAST-Flyer spacecraft, also known as SP-206. The Spartan spacecraft is one of the primary payloads on the STS-72 shuttle mission slated to launch January 11, 1996.

SPRE is designed to relay ground station positions and transmit telemetry containing the GPS location of the spacecraft and housekeeping data. The GPS data is generated by another Spartan experiment and sent to SPRE via a serial connection. Special software called APRtrak (tm) will be used at SPRE ground stations to provide a mechanism to plot the positions of stations and objects world-wide using SPRE transmissions. Ground stations can transmit their locations to SPRE, and if heard, SPRE will relay GPS information back to Earth. All ground stations within range of SPRE will see the relayed station locations plotted on a map. APRtrak system can plot and track both fixed and mobile ground stations. The APRtrak software will decode and display SPRE housekeeping telemetry including temperatures, voltages, and system status, along with the geographical positions.

SPRE can be used as an educational tool in many classes including math, science, and geography. The APRtrak software with its colorful graphics and maps is available on Internet for installation on IBM compatible computers. Even if a school is not in session during a fly-over, a simple packet radio station can be set up to listen to the SPRE telemetry and record the data for later use.

The spacecraft will be deployed by the robot arm 3 days and 2 hours (3/02:00:00) Mission Elapsed Time (MET). After deployment the shuttle will distance itself away from Spartan (up to 100 miles). The battery powered spacecraft will perform its mission following a preprogrammed routine.

SPRE operations will start 2 hours and 41 minutes after the deployment and continue for approximately 46 hours. During the mission the attitude of the spacecraft will be changing. The spacecraft will make about 33 orbits before retrieval.

Near the End-of-Mission (EOM) the shuttle will approach the spacecraft for pickup. At approximately 5/00:30:00 MET the spacecraft will be grappled by the robot arm and returned to its berth in the cargo bay, thus ending the Spartan 206 mission.

Mission Summary

Mission: STS-72, Space Shuttle Endeavour (OV-105)
Launch: January 11, 1996 at 09:18 UTC (60 minute launch window)
Orbit: 28.45 Degrees Inclination
Landing: January 20, 1996 at 04:54 UTC at KSC

Spartan Deploy: ~3/02:23:00 MET
SPRE mission: Starting 2 hours 40 minutes after Spartan deployment operational for approximately 46 hours
Operating Mode: FM, AFSK 1200 baud packet radio
Frequencies: 145.550 MHz Simplex
Callsign: W3EAX, unproto mode only, do not connect!
Retrieval: ~5/00:30:00 MET

3.0 BASIC SATELLITE COMMUNICATIONS TUTORIAL

This short tutorial is written with SPRE communications in mind. It does include some specific information regarding the Spartan orbit.

In order to communicate with a satellite, its antennas need to be within line of sight of the ground station antennas. When a satellite is in "line-of-sight", you can not necessarily see it. It only means there is an unobstructed path between the two points. Satellites can only be seen visually if they are passing over your location around dusk or dawn.

At an altitude of 165 miles, the Spartan spacecraft has a circular "foot print" that is approximately 1000 miles in radius with the spacecraft at the center. The foot print is the area of the Earth that is in line-of-

sight of the spacecraft. This circular foot print moves with the spacecraft. A ground station that is within the foot print is within line-of-sight of the spacecraft. Where you are within the foot print will determine the angle, or elevation, of the spacecraft above the horizon. During a pass, the spacecraft will rise and set like the Sun and Moon, only much faster.

The quality of a pass is determined by the maximum elevation during a pass. The higher the elevation, the better and longer the pass. The general rule of thumb is that a satellite needs to be at least 5 degrees above the horizon to be heard. However, this will vary depending on the station setup and local topography. A good pass will have an elevation greater than 20 degrees. Passes can last from as little as 10 seconds to as long as 10 minutes. Most satellite tracking software packages can predict passes accurately to within seconds if the orbital elements are up-to-date.

The Spartan spacecraft will be in a 28 degree inclination orbit. This means the orbit is tilted by 28 degrees with respect to the Earth's equator. Therefore the spacecraft will only be directly over head as far North or South as 28 degrees. However, since the spacecraft is 165 miles high and because of the size of the foot print, it is within radio range of stations much farther North or South.

As mentioned in the beginning of this section, the antennas of both the spacecraft and the ground station need to be in line-of-sight. This is not always the case during a satellite pass. This is because the antennas on most satellites have a degree of directionality to them. During a pass the antennas might not be pointing at the ground station antennas, or even the Earth. The orientation of a spacecraft is referred to as the attitude. In the case of SPRE, the antenna system was designed to be as independent of the spacecraft attitude as possible. However, there are some spacecraft attitudes that will result in a degraded signal. During the Spartan mission the attitude will be changing due to the other experiments.

4.0 CAN OUR SCHOOL DO THIS???

The following are some things to consider if your school wants to participate with SPRE. There are different levels of participation to be considered as well.

4.1 SPRE Passes

Before setting up any equipment it is important to determine if SPRE will fly within range of your location. If it does, the quality of the passes needs to be considered. To make this assessment, first look at a map and determine the latitude (degrees North or South of the equator) in which your school is located.

If your latitude is greater than 43 degrees, your chances are hearing or relaying through SPRE are zero.

If your latitude is between 40 and 43 40 degrees, your chances are hearing SPRE are very poor. Your chances of relaying a signal through SPRE are about zero.

If your latitude is between 35 and 40 degrees, your chances are hearing SPRE are very good. Your chances of relaying a signal through SPRE are poor without a well equipped HAM radio satellite station.

If your latitude is less than 35 degrees your chances of hearing SPRE are excellent. Your chances of relaying a signal through SPRE are good with modest equipment if there is not much competition on the uplink.

Latitude	Hearing SPRE	Relaying Through SPRE
> 43	No Chance!	No Chance!
40 - 43	Poor	Very Poor
35 - 40	Very Good	Poor
< 35	Excellent	Good

4.2 Levels of Participation

There are two levels of SPRE participation. These levels have varying complexity, interaction, and equipment requirements.

Full participation would include a setup with APRtrak and an amateur radio station capable of transmitting through SPRE. This implies that the station is at a favorable latitude (see above). The station would be operated by students with the oversight of a licensed amateur radio operator during a pass. A sophisticated station with big antennas and a high powered amplifier are not necessarily required for full participation.

The next level of participation centers around receiving data instead of the ability to transmit to SPRE. This mode of operation requires the least complex equipment and less effort. This may be the mode of choice for schools that do not have the time or resources to put together a complete station or if school is closed during a pass. APRtrak along with a TNC and almost any VHF (2 meter band) radio will work, even a hand-held radio. The antenna can be as simple quarter wave vertical. The more favorable the Latitude the simpler the equipment to receive data. The station can be operated during a pass or APRtrak can be setup to just listen and collect data. All data can be saved to the computer hard disk. All data saved to disk can be replayed on the screen!

4.3 Amateur Radio Operators

In order to get started your will need at least one licensed amateur radio operator. If there are none with in the student body or faculty then please contact Peter Budnik from the Amateur Radio Relay League (ARRL).

He has information on local amateur radio clubs, operators, and volunteer instructors in your area who may be able to assist you.

Peter Budnik
ARRL
225 Main Street
Newington, CT 06111

e-mail: pbudnik@arrl.org

4.4 Equipment and Software

The last major item to consider is the availability of the equipment. It is our suggestion to setup a station in the classroom. See the section below for details of what is equipment required. The equipment needs to be acquired, setup, and tested. This requires a certain level of organization, patience, and technical knowledge. This is where a knowledgeable amateur radio operator will be able to increase your chances or success. Unfortunately, the SPRE Project is not able to provide detailed technical support except with regards to APRtrak.

The needed software is available on the Internet. It is not too complicated, but may require some playing around to get familiar with the programs.

4.5 Successful SPRE Participation

As mentioned above it will take some coordination and planning to get setup for SPRE. It is suggested that, if possible, schools get together and combine efforts. This can also result in more student participation making it a more successful event.

5.0 GROUND STATION SETUP

This section covers the equipment needed to participate with SPRE. It has been the goal of the SPRE Project to make it as accessible as possible to the amateur radio and educational community. We have tried to make the ground station requirements as simple as possible. In general it does not take much power to communicate with SPRE. Since the SPRE foot print is so large, it is potentially within range of dozens or even hundreds of ground stations. All these signals will be competing with each other at the SPRE receiver. If there are a lot of stations transmitting at the same time, then usually the biggest signal wins. However, if a low power transmitter is sending at the right time it can get through just as easily. Always try to use the lowest amount of power needed to communicate with SPRE.

5.1 Hardware

IBM compatible PC:

Recommended configuration Minimum Configuration

386, 486, or Pentium processor XT
VGA color monitor CGA monochrome monitor
640KB RAM 640KB RAM
4MB free hard disk space 3MB free hard disk space
3.5" floppy disk drive 3.5" floppy disk drive
RS-232 Serial Port RS-232 Serial Port

Simple packet radio station setup:

- Licensed Amateur Radio Operator
- Terminal Node Controller (TNC)
~ TAPR-2 compatible
~ 1200 BAUD AFSK
- VHF Radio (amplifier recommended if transmitting to SPRE)
- VHF Antenna (beam recommended if transmitting to SPRE)

Note: If you have an amplifier and a beam antenna, it is more likely that you will be successful in communicating with SPRE. It is NOT, however, recommended that you purchase this equipment to attempt communications. The length and scope of the SPRE experiment is too narrow to justify a major expenditure.

5.2 Software

APRtrak:

APRtrak Version 0.5 is the program that is required to work with SPRE. APRtrak is similar to another program called APRS. However, APRtrak contains SPRE specific implementations for decoding the spacecraft position and telemetry. It is important to get familiar with APRtrak before the SPRE mission starts. This will increase for success rate. APRtrak includes documentation on how to make local maps, how to run simulations, and general information on GPS tracking.

APRtrak is available on the Internet. Below are just two of the many places on the net where APRtrak can be found:

W3EAX, University of Maryland Amateur Radio Association:
URL ftp://w3eax.umd.edu/pub/spre/aprtrak/aprtrak.zip

AMSAT:
URL ftp://ftp.amsat.org/amsat/software/PC/tracking/aprtrak.zip

Unfortunately, APRtrak for Apple and Macintosh computers are NOT supported.

Satellite Tracking:

APRtrak has the ability to track up to ten satellites. The orbital elements for SPRE and the shuttle may be loaded into the system. There are many satellite tracking programs available on the Internet. The AMSAT FTP sight has several program available. In addition, orbital elements for satellites are available on the AMSAT site.

AMSAT:
URL ftp://ftp.amsat.org/amsat/software/PC/tracking/

6.0 PRE-FLIGHT ACTIVITIES

The following are some suggested activities to work on before the launch.

- Play around with APRtrak and replay the simulations. It is important to get familiar with APRtrak before the launch.

- Identify the latitude and longitude location of your school on the APRtrak maps.

- Generate a map of your local area. APRtrak comes with tools and instructions to generate news maps.

- Try to predict the temperature of SPRE during the passes over your location. Will it be hot because it is in the Sun or cold because it is in the Earth's shadow???

- Simulate the SPRE mission using satellite tracking software and the pre-launch orbital elements.

6.1 PRE-LAUNCH ORBITAL ELEMENTS

The preliminary orbital elements below may be used to simulate or predict when SPRE will pass over your location. It can be loaded into most any satellite tracking program. For best results, be sure your simulations use the dates and time listed in the Mission Summary above.

Note: These preliminary elements are for Spartan Spacecraft only, not the shuttle. They are subject to change.

Satellite Name: SPRE-00
Satellite NORAD Number: #40000 <--(DUMMY VALUE)
Element Set Number: 1
Elements Epoch: 96014.48984950
14 JAN 1996 @ 11:45:22.997 UTC
Orbit # at Epoch: 1
Inclination: 28.4779
RA of Ascend Node: 71.7928
Eccentricity: .001131
Arg of Perigee: 189.8166
Mean Anomaly: 358.1771
Mean Motion: 15.85695266
Acceleration/Drag: .0000177
BSTAR Drag: 0

Two Line Element (TLE) Format:

SPRE-00
1 40000U SPRE-00 96014.48984950 .00001770 00000-0 00000-0 0 11
2 40000 28.4779 71.7928 0011310 189.8166 358.1771 15.85695266 18

7.0 SPRE FLIGHT OPERATIONS

During the SPRE mission ground stations will need to have APRtrak up and running and setup for SPRE at least 15 minutes before a predicted pass. When the spacecraft initially rises above the horizon the signal will sound rather scratchy. The higher above the horizon it gets the more clear the signal will become.

Only attempt to transmit after successfully receiving some SPRE packets. Received packets are displayed at the bottom of the screen on APRtrak. If you can't hear SPRE, SPRE will most likely not hear you.

Watch the map to see other stations and the spacecraft. Do not zoom in to close or you may not see other stations. Set the zoom so that you are centered on your state and can also see at least one whole state on all sides.

7.1 OPERATING INSTRUCTIONS

DO's:

- Use APRtrak Version 0.5 to listen and/or communicate with SPRE.

- Use satellite tracking software to predict when SPRE will pass over.

- Set the comment field in APRtrak to the name of your school.

- Make sure your are recording all received data to the hard disk.

- Wait until you receive SPRE transmissions before attempting to transmit.

- Watch for other schools.

DON'Ts:

- Don't zoom in too close on the map.

- Don't attempt to connect using a conventional packet terminal program. It will not allow connects and you will be clogging the frequency with wasted transmissions.

- Don't transmit until you receive SPRE transmissions.

- If your locations has been successfully relayed by SPRE, please do not continue to transmit. Give other stations a chance to get through.

8.0 POST SPRE MISSION ACTIVITIES

The following are someone suggested activities to do shortly after the SPRE mission.

- Replay collected SPRE data using APRtrak.

- See how many other schools you heard and locate them on a map.

- Examine the telemetry and see how hot or cold the different parts of the SPRE electronics are.

- Send copies of your *.HST and *.LOG data files to the SPRE Project. We will take all the data files we receive and generate a composite file. This overview of the mission will then be made available to all schools and amateur radio operators.

9.0 QUESTIONS AND ANSWERS

Hopefully this will answer the most common questions. If not, send electronic mail to the SPRE Project (see Section 11.0 below).

Q: Do I need a GPS receiver.
A: No, APRtrack is used to setup your location parameters which are transmitted to SPRE.

Q: What is the difference between SPRE and SAREX?
A: SPRE will use packet radio in the un-connected or unproto mode. This means that stations can not connect to SPRE. This should ultimately provide more throughput. This experiment involves identifying the location of the spacecraft as well as ground stations. SPRE utilizes APRtrak with a graphical interface making it more interactive and interesting.

Q: How can I find out when SPRE is passing over my location?
A: By using satellite tracking software and up-to-date orbital elements. Tracking software and is available in the Internet. Orbital elements are also available on the Internet including the SPRE WWW home page.

Q: Can the SPRE Project tell me when the spacecraft will be passing over my location?
A: No.

Q: Where can I get updated orbital elements?
A: They are available at the AMSAT FTP site and home page. During the mission they will be available on the SPRE home page (URL http://w3eax.umd.edu).

Q: Can the SPRE Project tell me what kind of antenna or radio to use?
A: No.

10.0 SPRE PROJECT

Participating stations should contact the SPRE Project so that we can try to keep you updated on any changes. Send electronic mail (e-mail) to Ken McCaughey at kenneth@w3eax.umd.edu.

SPRE Home Page: URL http://w3eax.umd.edu

Thanks for the many e-mail responses to my post. All questions were answered and I forwarded the replys to others who e-mailed me to get the same info. The SaTrack IV looks like the device I want. The only work to be done is to build a cable to the rotor control box and one to the radio (two wires to the radio),then I think you can buy a serial cable to go to the computer for transferring Keps data etc.

The latest information is at http://www.teleport.com/~n7ryw/asatpage.html

I've been seeing the same thing for more then two weeks. I was asked by
a local professor to carry the launch of the X-Ray telescope, Dr.Lamb. As
he helped build the thing and wanted to see it go off last week. We
carried the signal, but I was told all they had up was bars. As I was
asleep during the launch, our computer switched over to NASA during the
launch window and 90min's after. I have not talked to Dr.Lamb since I
spoke to him the night before the launch. So I don't even know if the
thing went up. In fact the last launch attempt got on national news
because it's been halted so many times and also because one of the people
said a four letter word. It's too bad that it was not shown if it went up.

My thoughts are that the goverment shutdown has something to do with
it. As Dr.Lamb tried to get press material for us to edit into an
interview with him. But no one answred the phone.. So that never worked
out. My only thing with the bars is that, it would cost money to air
anything on a sat. Costs the same with bars and without. So why not turn
off the transmitter and lease out the transponder? Also don't you need
someone to monitor the transmitter all the time? That would be a boring
one to watch.

I have used my sound blaster to receive SSTV pictures. Unforutnatly,
it is not likely to do the DSP functions you want. Using DMA, which
is the only reasonable way to operate an SB, it is only half duplex - you
can either record or playback digital data, not both at once which would
be required for real time processing. (the card will route the input
to the speaker, but you cannot do DSP with that).

Some of the Turtle Beach cards do support full duplex operation and
could be used for you purposes.

There is a patch to make the SB16 full duplex. I got it to get my
Vocal-Tec I-Phone working full duplex.
Cant recall for sure where I got the patch but probably WebPhone,
Interphone or Vocal-Tec.

<snip>

>In fact the last launch attempt got on national news
>because it's been halted so many times and also because one of the people
>said a four letter word. It's too bad that it was not shown if it went up.

Actually the primary reason that particular launch attempt made the national news was that it involved an engine shutdown, and the spacecraft was owned by NASA. There have been two other Delta shutdowns in the Delta II program and they're pretty impressive to watch - and a bit scary. In each case the small vernier roll control engines ignited but the main engine failed to start properly somewhere in its startup sequence so the computer instructed the system to shutdown and safe itself before the command was ever sent for the solids to ignite or launch.

I saw a the CBS national news accidentally that night, and my only complaint was the comment that it was the fifth delay for the mission. While true it did not mention that the reason for the four delays was seasonal upper level winds. The four letter word was spoken by one of the launch controllers, and a perfectly normal reaction to something not going right. But it just made it a bit more newsworthy.

> My thoughts are that the goverment shutdown has something to do with it.

You got it.

>As Dr.Lamb tried to get press material for us to edit into an
>interview with him. But no one answred the phone..

Regretably the public affairs officers, for the most part, are not considered critical to government operations. So it isn't surprising that nobody was on the phone. However, existing materials are available via Internet, and some of the schools involved with the XTE project (UCSD and MIT) are certainly available. The government personnel critical to the project are working on XTE - don't worry about that part.

>My only thing with the bars is that, it would cost money to air
>anything on a sat. Costs the same with bars and without. So why not turn
>off the transmitter and lease out the transponder? Also don't you need
>someone to monitor the transmitter all the time? That would be a boring
>one to watch.

Not sure about the legalities involved, so this is off the cuff. There is an additional cost to NASA whenever the transponder is actually used (as opposed to when it's idle or just showing color bars), that's part of the agreement when the NASA TV transponder was leased/purchased/whatevered.

There is a substantial cost to the actual operation of setting up and using the transponder, including the Lockheed video technicians and camerapeople here at the Cape, uplink engineers, etc. - and a NASA supervisor. For the XTE launch it was deemed to be not absolutely necessary, but the current plans are for the shuttle launch to be shown on NASA TV.

In any case the launch did go on Saturday December 30th at the beginning of the window and as far as I know everything is okay with the spacecraft. There was an update at the Goddard Web page (which I don't have off the top of my head. Go through the NASA pages to the Goddard spaceflight center, find the Explorers project, and then look for XTE).

There was one piece of amusement. Several local central Florida TV stations which normally don't show up for an expendable launch did appear in person - because they had to be there in person with their own cameras since they couldn't just record the launch off the satellite. For the most part they were there just in case it failed on the launch pad (Saturday is a pretty slow news day). They certainly had the capability to uplink the video of the launch through a commercial network satellite if any affiliate around the country was interested, but I'd suspect that a successful launch of a NASA rocket during a weekend just before New Years wasn't anything to get really excited about.

>We don't know if STS-72 will actually launch if the government is still >shutdown or not...nobody will answer the question.

The definitive answer - NASA shuttle managers met on Thursday January 4th and set January 11th as the official launch date for STS-72 - even with the government shutdown in effect.

All personnel who are crticial to the mission (including SPRE) will be permitted to work. (note that I did not say anything about getting paid - personal comment).

However, there will be extremely limited public activities relating to the mission. The Internet web pages will not be updated, no car passes will be permitted for launch from the viewing sites, and no press conferences - either before or during the mission - are planned.

Only press materials which were prepared before the furlough will be distributed.

There will be NASA TV coverage (both satellite and audio circuits) from a 11 pm Wednesday January 10th (the night before launch) through landing.

Hopefully keps for the shuttle and Spartan will become available through the normal networks, although I'm certain there will be difficulties.

There is a good trick to tracking a spacecraft, like Spartan, which is deployed and retrieved by the shuttle. Just use the latest available keps for the shuttle before it deploys the Spartan spacecraft. Remember that Spartan has no onboard propulsion system which would move it in to a different orbit - just extremely small cold gas thrusters which are used for attitude control. So the Spartan remains in the orbit the shuttle leaves it in. Then the shuttle maneuvers in to a slightly different orbit,
eventually ending up at a stationkeeping position about 40 nm away from Spartan, and then the shuttle begins a set of maneuvers to rendezvous with Spartan, ultimately ending up in the same orbit where Spartan was originally released!

On previous Spartan and SPAS missions I have tracked the predicted location
where the shuttle would catch up with the free-flyer very accurately using the pre-release keps for the shuttle.

It's also important to note that 40 nm. is a fairly small distance in terms

of orbital dynamics - while the two spacecraft will appear as separate
dots
visually, only the narrowest beams will care about which target it is
pointed towards.

31. A scheduling component for element set data

Newsgroup: rec.radio.amateur.space
Date: 1996-01-05 00:00:00 UTC
From: amcleod@anjo.hi.net
Message-ID: <414.13.39@anjo.hi.net>
Source record: 23298

Has any thought been given to the possibility of adding a new "element"
to AMSAT-format ElSets? The "Checksum" element was added after-the-fact,
I do believe, so why not a new (optional) item that describes the operating
schedule in some form?

32. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1996-01-06 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4ckusj$q3d@blackbird.afit.af.mil>
Source record: 23299

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)
```

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293

Be extremely cautious before making firm plans with these preliminary
elements. A reliable source has told me that the Japanese Space Flyer
Unit (SFU) has had some problems, so the shuttle will almost certainly
have to use a different rendezvous profile to reach SFU. This will
certainly require more propellant. And the OAST-FLYER's flight plan will
probably change. It may be as simple as a higher orbit, but probably
will involve some shifting of the orbital plane for the freeflight period.

Preliminary elements are excellent for calculating the lengths of passes,
look angles, and to a lesser degree adequate for calculating sun angles
and lighting conditions. But always rely on the true post-launch keps
whenever possible.

(I did run the above keps, and it turns out I've got nine excellent
passes for the predicted time. But all in the middle of the night. Now
if I can only delay the mission long enough for SFU's orbit to precess in
to daylight passes ....)

35. Teletype corp printing terminal for sale.

Newsgroup: rec.radio.amateur.space
Date: 1996-01-06 00:00:00 UTC
From: oddjob@cix.compulink.co.uk
Message-ID: <DKrD7K.K0A@cix.compulink.co.uk>
Source record: 23302

Teletype corp printing terminal for sale.

I can't remember if it's a asr or ksr33.

I have one of these things in NW London, in storage which I'd like to sell.. as I'm more into ham radio these days...

It comes supplied with a step-down transformer and it may need some attention. I have never used it, although it cam with my PDP 8e, which I'd also like to sell/swap at some later date.

I also have an Intersil Intercept unit as well, with 4kb of battery backed ram!

Please feel free to make me an offer either for cash or ham radio equipment.

regards

Steve

36. Wraase MR-9202 WxSat Rx - Help?

Newsgroup: rec.radio.amateur.space
Date: 1996-01-06 00:00:00 UTC
From: jwhac4ca@mindspring.com
Message-ID: <30eeefeb.308678@nntp.mindspring.com>
Source record: 23303

Can anybody help me locate the schematic and RS-232 interface specs for a Volker Wraase MR-9202 WxSat receiver? I'm also looking for an English translation of the Users Guide. I have the German version. Thanks in advance for any help you can provide. 73. -John (AC4CA)

38. uplink and downlink freqs. for MIR

Newsgroup: rec.radio.amateur.space
Date: 1996-01-06 00:00:00 UTC
From: johnestein@mcn.net
Message-ID: <4cmg78$1tm@news.mcn.net>
Source record: 23305

Hi, I'm brand new to the hobby of amatuer radio and would like to try to work the MIR space station. I've looked in my ARRL handbook and can't find the uplink and downlink frequencies for MIR. Maybe I'm just not looking in the right places. I'd like to try both packet and voice communication.

Thanks!
John Stein

Want to buy or rent (so I can copy) a service manual for the Icom IC-211
2m Multimode transceiver. Will purchase either an original or copy.

40. Instant Track Problem

Newsgroup: rec.radio.amateur.space
Date: 1996-01-06 00:00:00 UTC
From: braymond@ns.poweramp.net
Message-ID: <braymond.9.005A1346@ns.poweramp.net>
Source record: 23307

I recently moved up to a Pentium computer and now Instant Track has problems displaying the updated data on the screen. I have heard of this problem, but do not recall what if any, the cure may be.

Is there anyone out there that recalls this problem.

Bob, KG7WC

Radio Meteor Observation Bulletin No. 29 Jan 1996

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: E.P.Bus
Location: Groningen, The Netherlands (6 33' E, 53 13' N)
Frequency: 66.89 MHz
Transmitter Location:
Krakow, Poland, 120 kW, Distance 1001 km
Antenna: Yagi, 3 elements, Azimuth 106 o (=ESE), elevation 12 o
Receiver: Bearcat UBC 177XLT Scanning Radio
Sensitivity: 0.3 microvolt
Observing method: Listening

Leonids 1995

Long duration reflections >1 sec during one hour intervals starting at 22h UT:

Nov 10/11	Nov 17/18
22h 11	12
23 9	9
0 4	14
1 7	20
2 4	18

3 2	11
4 1	11
5 1	11
6 0	15

7 1 12
8 3 5
9 2 11

Notes:

After correction for sporadic activity and Observability Function (after Hines), maximum activity occurred on November 18 around 2.5h UT, Solar Longitude 235.32 (J2000.0).
In 1994 on Nov 18 the activity was much higher and the observed maximum occurred on November 18 around 8.5 h UT, Solar Longitude 235.83 (J2000.0).

66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East),
elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA, Bratislava
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are

available for further analysis. Reduction software for DOS and
Windows available].

December 1995
Geminids, Ursids

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Dec	UT											

Notes:

. * maximum Geminid activity on the morning of Dec 14.
Best forward scatter conditions for this setup between 2h and 8h UT.
Compare with last years's results in RMOB9412.

. & some Ursid activity on Dec 22-23. The radiant is circumpolar for this location. Apparently, no outburst took place.

Maurice De Meyere / Chris Steyaert

Observer: Werfried Kuneth
Location: Villach, Austria (46 37' N, 13 53' E)
Frequency: 59.250 MHz, SSB mode
Transmitter location: 150 kW TV video carrier from Bucaresti, distance 950 km, east. Sometimes other TV video carriers are selected.
Antenna: dipole with reflector, direction east.
Frequency 1: 59.250 MHz, SSB mode, 150 kW TV video carrier in Bucaresti, distance 950 km, east.
Frequency 2: 48.246 Mhz, SSB mode, 100 kW TV video carrier Location Germany, distance 550 km, northwest.
Dipole used alternating with frequency 1.
Receivers: Several, incl. homemade converter. AGC enabled. No preamplifiers.
Observing method: the audio signal is fed into a real time FFT display (FFTDSP program from AF9Y) on the PC where 640 channels of 2Hz width are recorded and stored continuously. Every meteor reflection produces a distinct whistle, which is recorded easily by the real time FFT program.
From the saved .GIF files, reflections of at least 15 seconds are taken to get the one hour intervals count starting at UT:

The following figures give information about the total length of the meteor reflections during one hour, expressed in percentage of time.

Total length of meteor reflections during one hour on receiver # 1 :

Dec UT

Ingo Reimann / via Jeroen Van Wassenhove

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 87.360 MHz
Receiver: narrow band FM, detected signal level >-122dBm.
Antenna: 2 element Yagi with 4dBd gain to SW.
Antenna Azimuth: 45 o
Computer: T-1000SE
Data sampling system: threshold crossing detection is fed in binary
form (1 bit) from the receiver to the computer.
Computer logs total hourly elapsed reflection time, number of
threshold crossings for the hour, the longest time the signal was
continuously above detection level for the hour.

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and has gradually been expanded.

Typically it contains: summaries of recent observations, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or unsubscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

145.55 simplex. Mostly Packet, if your're lucky voice. You'll need to use
a tracking program.

43. Hubble Downlink freq.

Newsgroup: rec.radio.amateur.space
Date: 1996-01-07 00:00:00 UTC
From: keeth@su1.in.net
Message-ID: <4cp9sm$pq0@su3.in.net>
Source record: 23310

According to SATELLITE TIMES Nov/Dec 95, the Hubble usually communicates to NASA's Tracking and Data Relay Satellite System (TDRSS). Two steerable high gain antennas are used. Freqs are 2255.5 Mhz and 2287.5 MHz. Low gain antennas receive ground commands and transmit engineering data on freqs from 2100 to 2300 MHz.

73,
Jim AF9A

48. Yaesu 5400 noise

Newsgroup: rec.radio.amateur.space
Date: 1996-01-08 00:00:00 UTC
From: tom_boza@ccm.ch.intel.com
Message-ID: <4crf5v$1534@chnews.ch.intel.com>
Source record: 23217

My Yaesu 5400 rotor control box is generating noise hash on the HF bands. If I turn the contol box off, the noise disapears. Is anyone else having this problem? If so, is there a fix?

WB7ASR...

I don't recall either but logic points me toward a non-standard display driver. A lot of the cheaper Pentiums seem to have "Harry's discount video boards" in them. I have had this trouble with other code where the video card was not truly backward compatible.

54. HamCom '96 Speaker's Forums

Newsgroup: rec.radio.amateur.space
Date: 1996-01-08 00:00:00 UTC
From: craigs@ti.com
Message-ID: <4cre3g$eiv@superb.csc.ti.com>
Source record: 23316

The HamCom '96 amateur radio convention is expanding its focus this year, with a theme of "Computers, Satellites, and Microwaves in Today's Amateur Radio" and is looking for speakers who can address these topics. Of particular interest are programs which bridge these topics (High speed packet on the microwave bands, packet operation via satellite, etc.). Speaker sessions are typically 20 to 30 minutes in length. HamCom '96 runs Friday, Saturday, and Sunday, June 7 - 9, with speaker's forums all day Saturday and morning on Sunday.

If you are interested in speaking at HamCom '96, or have suggestions for speakers, please contact me at email address craigs@ti.com, or via phone at (214) 952-4616.

55. 16 Channel Logic Analyzer for trade/sale

Newsgroup: rec.radio.amateur.space
Date: 1996-01-09 00:00:00 UTC
From: "Walt W.", dfheli@Gramercy.ios.com
Message-ID: <4cuc50$2e9@news.ios.com>
Source record: 23222

Hello,

I have for sale or trade a Gould / Biomation K-102-D
16 channel logic analyzer.
This instrument has self contained 7.0" crt display.
The instrument was used for GPIB interface design &
analysis. It is a great tool. It resolves glitches to 5 ns.
The instrument needs pods.
It works.

I am asking $550 or trade?

I am looking for a HeathKit Hero Robot, I would be interested
in a trade, or maybe a CamCorder?

Interested parties may reach me at (818) 700-8915 or
dfheli@gramercy.ios.com

Mir uses simplex on 145.550 both voice and packet. Euromir uses 145.800 for downlink and 145.200 for uplink. Euromir callsign is DP0MIR. Mir's call on 145.550 is R0MIR for the keyboard and R0MIR-1 for the Pbbs. Only ONE connect at a time on the PBBS and 7 at a time to the keyboard. After 2100 utc they are asleep and not at the station.

Hi there.
Rec .radio.amateur.space is where radio amateurs ask questions
to other amateurs around the the world about amateur radio satellites.
We use these satsllites to commutate to each other around the world.
You need a licence to operate throught the satellites, this corse takes
about 1 year here in Ireland. Hope this answers your question.

>
>My Yaesu 5400 rotor control box is generating noise hash on the HF
>bands.
~~~~~~

Mine too Tom, I just turn it off like you do. It doesn't always generate the noise. It is more noticable if the beams are facing the operating postition. I have thought about adding some decoupling caps to the control and power lines to see if it would help. Others must be having the problem too. Maybe Yaesu has a fix for this.

Ken mbv@ti.com

I have been thinking about buying an AZ-EL rotor. I see a few advertised.
Which are the good ones and which are the bad ones? Besides price. how
are they evaluated? I will be using it for 2M and 436 MHZ OSCAR antennas.

Thanks, Allen WB6RWU Capitola Ca.

64. Re: uplink and downlink freqs. for MIR

Newsgroup: rec.radio.amateur.space
Date: 1996-01-09 00:00:00 UTC
From: Jim Devenport <jdevenport@lanl.gov>
Message-ID: <4cuts4$kgn@newshost.lanl.gov>
Source record: 23231

The MIR space station is much easier to contact via radio than ANY of the USA Shuttle missions but it isn't overly easy either. I don't even bother to use satellite tracking programs for MIR any more, I just put 145.55 simplex into my 2 meter mobile and remote base memories and add it to the scanning lists. Several times a day I'll hear the packet buzzing away and with simple packet equipment I've contacted the MIR system several times but rarely have gotten more than the successful connect or a busy (DM) signal from the MIR TNC. A "busy" signal is actually, to me, a successful 2-way packet contact especially if you compare it to the usual USA SAREX policy of hoping to someday see your callsign in a published "stations heard" list. If you get a busy signal from MIR (very likely) it proves MIR has successfully heard you and you have successfully heard MIR. Full callsign exchanges and all: a legit 2-way contact. But confirming it may be a problem.
Voice operation seems to be getting rarer and rarer from MIR but the cosmonauts still pop up on voice unexpectedly from time to time. I have called them repeatedly with high and low power without success but there are at least several local stations in Northern New Mexico who have successfully QSO'ed with MIR using 10 watts or less into omnidirectional outside antennas.

66. RS10 Freqs

Newsgroup: rec.radio.amateur.space
Date: 1996-01-10 00:00:00 UTC
From: chand@netcom.com
Message-ID: <30f36678.4033252@nntp-server>
Source record: 23233

The RS10 beacon sure seems to be more like 29.358 than 29.357. At the beginning of a pass I hear it at 29.3585, and at the end I hear it at 29.3575.

Also, I noted my U/L and D/L frequencies at one time (145.870 and 29.364) and, accounting for the doppler shifts at that moment (-2800 U/L and -564 D/L) I calculate the actual transponder shift to be 116.5027 Mhz rather than 116.5000 Mhz.

Has anyone else made similar or contradictory observations?

SpaceNews
=========

MONDAY JANUARY 1, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* SpaceNews NEWS *
==================
SpaceNews is a non-commercial electronic journal including articles of
interest to Amateur Radio Operators involved in satellite and other advanced
areas of telecommunications. It is published every week (as time permits)
and is available for unlimited circulation provided no charges are made and
no profits are realized from its availability.

SpaceNews has been in existance for about 8 years and is available from a
variety of different electronic sources. It is widely distributed on the
Amateur Packet Radio (AMPR) network through thousands of terrestrial packet
bulletin board systems around the world. SpaceNews circulation on packet
radio follows normal AMSAT message routing. SpaceNews is also uploaded
regularly to the AMSAT-OSCAR-16 digital store-and-forward "Pacsat" satellite
in compressed (ZIP) form.

In addition to wireless circulation, SpaceNews is also posted to several
Usenet newsgroups on the Internet including: rec.radio.info, sci.space.news,
and rec.radio.amateur.space. Those with Internet access can obtain the
latest issue of SpaceNews by using the Unix "finger" command as follows:

finger magliaco@pilot.njin.net

Those with e-mail capabilities can receive SpaceNews by sending a blank
message to "infobot@infomania.com" with a subject of:

#FINGER magliaco@pilot.njin.net

Archives of SpaceNews issues from years past are available via anonymous
FTP at pilot.njin.net (128.6.7.38). Files are located under the
/pub/SpaceNews subdirectory. Archives from 1993, 1994, and 1995 have been
compressed into .ZIP files, while issues from 1996 are available individually
in ASCII text form.

=========
SpaceNews
=========

MONDAY JANUARY 8, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* MIR NEWS *
============
The cosmonauts on the Russian space station Mir have unpacked their new
Amateur Radio equipment and are expected to place it on the air shortly.
The new equipment includes a 70-cm FM transceiver along with some 9600 baud
packet radio equipment.

* RS-15 NEWS *
==============
G3IOR reports that RS-15's nighttime performance has changed. The transponder
now remains ON for 1 second and OFF for 10 seconds during eclipse periods.
RS-15 was seeing 36 minutes of eclipse each orbit during late December giving
a battery charge efficiency of just 72%. The eclipse commences when the
southbound satellite reaches 58N, continuing until it comes into sunlight
again at 25S. The transponder and beacon become intermittent after RS-15
has been in eclipse for 5 minutes, when the battery drops to 12v DC.

By 14th January, RS-15 will see 28 minutes of eclipse, going down to 20
minutes (85% charge efficiency) on 20th January, and 16 minutes (91%) on
22nd January. On 23rd January the satellite sees 100% sunlight again, and
should give 24 hour/day operation again.

Dave G4CUO and John G4ZHG have now worked via RS-15 all US states other than
New Mexico, Delaware, Mississippi, Alabama and of course Hawaii. While the
latter poses a problem, Dave would like to complete WAS of all mainland
states and is regularly looking for USA contacts in the US evening periods

between 0000 and 0300 UTC.

* PRC-37 NEWS *
===============
PRC-37, also known as 'JIANBING-93' is reputed to be the return package of a photo and radio 'spy-sat' that is due to re-enter in early 1996. Apparently the retro-rocket firing accidentally placed it into a highly elliptical orbit with a rather low perigee. It is designed for re-entry, and as the parachute is unlikely to deploy, will probably impact. Current studies show the 990 km apogee to be at 52N, and the 153 km perigee at 52S. No beacon frequency is known. Orbital enthusiasts may wish to study the re-entry as a precursor to the following of the demise of OSCAR-13, as few have had experience with elliptical orbiter return. No 'Chicken Little' contest has evolved to date!

Here are a late 2-line Kep-Set:-

JIANBING-93 P/L(1)
1 22870U 93063H 95335.24898568 .00304666 82639-5 20323-3 0 3248
2 22870 56.4566 96.6266 0604138 229.7187 124.9507 14.94537215 2456

[Info via Pat Gowen, G3IOR]

* DOVE NEWS *
=============
DOVE-OSCAR-17 returned to the 2-meter band sooner than expected after its recent on-board computer (OBC) crash only to experience another OBC crash on 29-Dec-95 at 0500 UTC while reloading new operating software.

Normally, the 2-meter beacon transmitter switches OFF and the S-band beacon switches ON when the OBC crashes. A hardware failure on the satellite makes software upload very difficult and risky. This most recent crash came unexpectedly, and will require investigation. Recently copied DO-17 telemetry should be forwarded to Jim White, WD0E at his e-mail address: wd0e@amsat.org.

* SpaceNews NEWS *
==================
A compressed (ZIP) archive of all 1995 issues of SpaceNews are available via anonymous FTP at pilot.njin.net in the pub/SpaceNews subdirectory. The pub/SpaceNews/webersat-images subdirectory holds some WEBERSAT-OSCAR-18 images downloaded and processed by ZL1AAN. If time permits, some of these images may be complied into a World Wide Web page over the next month or so.

Hi all-

Just got my brand spanking new FT-736R and wanted to start some work on the birds. I'm just starting out so I'm using a Comet GP-6 2M - 70cm vertical until I can get some beams up. I can hear some of the satellites fine (especially FO-20) on 70cm. But, when I try to hear anything in the 145.8 - 146 range for 2m I am receiving a LOT of noise. Tuning up or down 1MHz will result in a fairly quiet noise floor. The noise is broadbanded otherwise, with no detected "edges" or carriers or hint of information content. The problem exists all day and night with no descernable changes. Removing the antenna and checking eliminates any frequency dependancy on noise across 2m, so I'm guessing it isn't the radio itself. But I do live in a fairly densely populated area with TV cable in a radio noisy zone (Sunnyvale CA). Is this common for TV cable leakage to cause this, even though it does not sound like the video sideband? Anyone have any ideas on this? Could this be some spread spectrum double secret spy stuff?

Thanks,

Jim

It primarily deals with discussions of Amateur Radio as it pertains
to satellite communication and has nothing to do with astronomy
or related topics. I'm not sure what the Planetary Society is but
I am assuming it has to do with astronomy. I'm sure you'll get other,
more definitive answers.

Later...

77. NORAD Two-Line Orbital Element Sets (TLE736)

Newsgroup: rec.radio.amateur.space
Date: 1996-01-11 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4d41bh$cp@blackbird.afit.af.mil>
Source record: 23244

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Hi Allen. I have the YAESU G-5400B rotator operating with the Kansas City driver/tuner. That is one of the cheapest commercially made, and it always worked. I have M2 2M, 70cm, and a Bob Myers s-mode 2.4 ghz antenna. I do not have any problem with chatter (dead band set at 5 degrees), or any other problem. Tom

It depends on your local weather, and the pointing accuracy that you
desire. For 2m and 70cm the Yaesu G-5400 and G-5600 are OK, but they
are known to fail after extended periods of coverage to moisture.
The moisture gets in the rotators and destroys the feedback potentiometers.

The potentiometers are also not accurate enough for SHF antenna pointing,
but mods exist to add optical encoders.

Rob

Source record: 23248

Hello, I have successfully gotting into the RS10/11 a couple of times with a vertical but i want to build an egg-beeter. The theory behind it I understand. Thanks to the Electronics Encyclopedia....excellent antanna section. This is what I need to know; are two complete loops used, which are made from one piece of wire each. Or is it like 4, semi - circles that are used. This makes the difference between a loop and a halo antanna. Also assuming each loop is complete, (no break at the top) then are the midpoints of both loops in contact?

Thank you!

I am looking for some way to keep in contact witht he shuttle missions.
I can't afford a sat. Dish, and have a scanner I was hoping to use. I live
in Utah, and someone gave me a freq. of 448.625, however this has
nothing but morse code on it.

Thanks for you time.

>anything in the 145.8 - 146 range for 2m I am receiving a LOT of noise.
>Tuning up or down 1MHz will result in a fairly quiet noise floor.
>~~~~~~

Jim, the problem may be just that the antennal is a vertical, which seems
to pick up more line noise than other types of antenna. The fact that the
noise peaks inside the band of interest is normal if the antenna is tuned
correctly. The impedance will match best at the frequency where the VSWR
is at minimum, which should be in the middle of the band.
I could barely detect any signal from AO-10 or AO-13 on an optimum pass
when listening with a dual band vertical, a two meter ground plane, or a
discone antenna. What you are describing is normal for an urban noise
environment. I don't think I could hear any satellites on 2M if the power
lines here weren't buried. I use a linear polarized 11 el long (22 ft) 2M
antennal for satellite reception. If you can, use a circular polarized ant
with polarization switching for best results.

Hope this helps.

Rob,
Where would one find info on these mods. I have 2 G-5400s. The one has been
on a 50' tower with an OSCAR 13 antenna setup. So far no problems and it's
been there for several years.

The other will be for 1.7 GHz feed on a 1 meter dish for weather satellite
(HRPT) reception. It would be great if I could improve the pointing accuracy.

Thanks!

Does anyone know of a site that list components that have been used in space?
Intended application is a polar low earth orbit, two year lifetime, 10K rad
(Si) total dose. Specific chips currently in question are: NEC uPD70236GD-16
(V53), TI TL16C550A and TL16C552, Nat.Semi. DS89C21TM, Motorola 68HC705B,
and Altera EPM7032.

Look for info on the tracking system designed by Freddy, ON6UG.
(the actual name escapes me right now, maybe someone else can fill this in)

Probably it can be found on some amateur radio FTP sites...
There is usually some talk about it on the digital sats as well, or
you can just ask over there.

SPARTAN PACKET RADIO EXPERIMENT (SPRE)

Setup Information for Participating Amateur Radio (HAM) Ground Stations

By: Ken McCaughey (N3FZX)
File: ham01.txt
Date: 20-DEC-95

1.0 INTRODUCTION

The Spartan Packet Radio Experiment (SPRE) is open to amateur radio operators and schools who want to participate. This document will guide you in your preparations for the SPRE mission. Included are some guidelines that will help you to determine if you can hear SPRE and what level of equipment you will need. Please read this document thoroughly. If you have any additional questions please contact the SPRE Project (see Section 10.0).

2.0 MISSION PROFILE

SPRE is one of four experiments on-board NASA Goddard's Spartan OAST-Flyer spacecraft, also known as SP-206. The Spartan spacecraft is one of the primary payloads on the STS-72 shuttle mission slated to launch January 11, 1996.

SPRE is designed to relay ground station positions and transmit telemetry containing the GPS location of the spacecraft and housekeeping data. The GPS data is generated by another Spartan experiment and sent to SPRE via a serial connection. Special software called APRtrak (tm) will be used at SPRE ground stations to provide a mechanism to plot the positions of stations and objects world-wide using SPRE transmissions. Ground stations can transmit their locations to SPRE, and if heard, SPRE will relay GPS information back to Earth. All ground stations within range of SPRE will see the relayed station locations plotted on a map. APRtrak system can plot and track both fixed and mobile ground stations. The APRtrak software will decode and display SPRE housekeeping telemetry including temperatures, voltages, and system status, along with the geographical positions.

SPRE can be used as an educational tool in many classes including math, science, and geography. The APRtrak software with its colorful graphics

and maps is available on Internet for installation on IBM compatible computers. Even if a school is not in session during a fly-over, a simple packet radio station can be set up to listen to the SPRE telemetry and record the data for later use.

The spacecraft will be deployed by the robot arm 3 days and 2 hours (3/02:00:00) Mission Elapsed Time (MET). After deployment the shuttle will distance itself away from Spartan (up to 100 miles). The battery powered spacecraft will perform its mission following a preprogrammed routine.

SPRE operations will start 2 hours and 41 minutes after the deployment and continue for approximately 46 hours. During the mission the attitude of the spacecraft will be changing. The spacecraft will make about 33 orbits before retrieval.

Near the End-of-Mission (EOM) the shuttle will approach the spacecraft for pickup. At approximately 5/00:30:00 MET the spacecraft will be grappled by the robot arm and returned to its berth in the cargo bay, thus ending the Spartan 206 mission.

Mission Summary

Mission: STS-72, Space Shuttle Endeavour (OV-105)
Launch: January 11, 1996 at 09:18 UTC (60 minute launch window)
Orbit: 28.45 Degrees Inclination
Landing: January 20, 1996 at 04:54 UTC at KSC

Spartan Deploy: ~3/02:23:00 MET
SPRE mission: Starting 2 hours 40 minutes after Spartan deployment operational for approximately 46 hours
Operating Mode: FM, AFSK 1200 baud packet radio
Frequencies: 145.550 MHz Simplex
Callsign: W3EAX, unproto mode only, do not connect!
Retrieval: ~5/00:30:00 MET

3.0 BASIC SATELLITE COMMUNICATIONS TUTORIAL

This short tutorial is written with SPRE communications in mind. It does include some specific information regarding the Spartan orbit.

In order to communicate with a satellite, its antennas need to be within line of sight of the ground station antennas. When a satellite is in "line-of-sight", you can not necessarily see it. It only means there is an unobstructed path between the two points. Satellites can only be seen visually if they are passing over your location around dusk or dawn.

At an altitude of 165 miles, the Spartan spacecraft has a circular "foot print" that is approximately 1000 miles in radius with the spacecraft at the center. The foot print is the area of the Earth that is in line-of-sight of the spacecraft. This circular foot print moves with the

spacecraft. A ground station that is within the foot print is within line-of-sight of the spacecraft. Where you are within the foot print will determine the angle, or elevation, of the spacecraft above the horizon. During a pass, the spacecraft will rise and set like the Sun and Moon, only much faster.

The quality of a pass is determined by the maximum elevation during a pass. The higher the elevation, the better and longer the pass. The general rule of thumb is that a satellite needs to be at least 5 degrees above the horizon to be heard. However, this will vary depending on the station setup and local topography. A good pass will have an elevation greater than 20 degrees. Passes can last from as little as 10 seconds to as long as 10 minutes. Most satellite tracking software packages can predict passes accurately to within seconds if the orbital elements are up-to-date.

The Spartan spacecraft will be in a 28 degree inclination orbit. This means the orbit is tilted by 28 degrees with respect to the Earth's equator. Therefore the spacecraft will only be directly over head as far North or South as 28 degrees. However, since the spacecraft is 165 miles high and because of the size of the foot print, it is within radio range of stations much farther North or South .

As mentioned in the beginning of this section, the antennas of both the spacecraft and the ground station need to be in line-of-sight. This is not always the case during a satellite pass. This is because the antennas on most satellites have a degree of directionality to them. During a pass the antennas might not be pointing at the ground station antennas, or even the Earth. The orientation of a spacecraft is referred to as the attitude. In the case of SPRE, the antenna system was designed to be as independent of the spacecraft attitude as possible. However, there are some spacecraft attitudes that will result in a degraded signal. During the Spartan mission the attitude will be changing due to the other experiments.

4.0 CAN I DO THIS AT MY LOCATION???

The following are some things to consider if you want to participate with SPRE. There are different levels of participation to be considered as well.

4.1 SPRE Passes

Before setting up any equipment it is important to determine if SPRE will fly within range of your location. If it does, the quality of the passes needs to be considered. To make this assessment, first look at a map and determine the latitude (degrees North or South of the equator) in which your station is located.

If your latitude is greater than 43 degrees, your chances are hearing or relaying through SPRE are zero.

If your latitude is between 40 and 43 40 degrees, your chances are hearing SPRE are very poor. Your chances of relaying a signal through SPRE are about zero.

If your latitude is between 35 and 40 degrees, your chances are hearing SPRE are very good. Your chances of relaying a signal through SPRE are poor without a well equipped HAM radio satellite station.

If your latitude is less than 35 degrees your chances of hearing SPRE are excellent. Your chances of relaying a signal through SPRE are good with modest equipment if there is not much competition on the uplink.

Latitude Hearing SPRE Relaying Through SPRE

> 43 No Chance! No Chance!
40 - 43 Poor Very Poor
35 - 40 Very Good Poor
< 35 Excellent Good

4.2 Levels of Participation

There are two levels of SPRE participation. These levels have varying complexity, interaction, and equipment requirements.

Full participation would include a setup with APRtrak and an amateur radio station capable of transmitting through SPRE. This implies that the station is at a favorable Latitude (see above). A sophisticated station with big antennas and a high powered amplifier are not necessarily required for full participation.

The next level of participation centers around receiving data instead of the ability to transmit to SPRE. This mode of operation requires the least complex equipment and less effort. This may be the mode of choice for stations located in unfavorable latitudes. APRtrak along with a TNC and almost any VHF (2 meter band) radio will work, even a hand-held radio. The antenna can be as simple quarter wave vertical. The more favorable the Latitude the simpler the equipment to receive data. The station can be operated during a pass or APRtrak can be setup to just listen and collect data. All data can be saved to the computer hard disk. All data saved to disk can be replayed on the screen!

5.0 GROUND STATION SETUP

This section covers the equipment needed to participate with SPRE. It has been the goal of the SPRE Project to make it as accessible as possible to the amateur radio and educational community. We have tried to make the ground station requirements as simple as possible. In general it does not take much power to communicate with SPRE. Since the SPRE foot print is so large, it is potentially within range of dozens or even hundreds of ground stations. All these signals will be competing with each other at the SPRE receiver. If there are a lot of stations transmitting at the same time, then usually the biggest signal wins. However, if a low power transmitter

is sending at the right time it can get through just as easily. Always used the least amount of power needed to communicate with SPRE.

5.1 Hardware

IBM compatible PC:

Recommended configuration	Minimum Configuration
386, 486, or Pentium processor	XT
VGA color monitor	CGA monochrome monitor
640KB RAM	640KB RAM
4MB free hard disk space	3MB free hard disk space
3.5" floppy disk drive	3.5" floppy disk drive
RS-232 Serial Port	RS-232 Serial Port

Simple packet radio station setup:

- Licensed Amateur Radio Operator
- Terminal Node Controller (TNC)
~ TAPR-2 compatible
~ 1200 BAUD AFSK
- VHF Radio (amplifier recommended if transmitting to SPRE)
- VHF Antenna (beam recommended if transmitting to SPRE)

Note: If you have an amplifier and a beam antenna, it is more likely that you will be successful in communicating with SPRE. It is NOT, however, recommended that you purchase this equipment to attempt communications. The length and scope of the SPRE experiment is too narrow to justify a major expenditure.

5.2 Software

APRtrak:

APRtrak Version 0.5 is the program that is required to work with SPRE. APRtrak is similar to another program called APRS. However, APRtrak contains SPRE specific implementations for decoding the spacecraft position and telemetry. It is important to get familiar with APRtrak before the SPRE mission starts. This will increase for success rate. APRtrak includes documentation on how to make local maps, how to run simulations, and general information on GPS tracking.

APRtrak is available on the Internet. Below are just two of the many places on the net where APRtrak can be found:

W3EAX, University of Maryland Amateur Radio Association:
URL ftp://w3eax.umd.edu/pub/spre/aprtrak/aprtrak.zip

AMSAT:
URL ftp://ftp.amsat.org/amsat/software/PC/tracking/aprtrak.zip

Unfortunately, APRtrak for Apple and Macintosh computers are NOT supported.

Satellite Tracking:

APRtrak has the ability to track up to ten satellites. The orbital elements for SPRE and the shuttle may be loaded into the system. There are many satellite tracking programs available on the Internet. The AMSAT FTP sight has several program available. In addition, orbital elements for satellites are available on the AMSAT site.

AMSAT:
URL ftp://ftp.amsat.org/amsat/software/PC/tracking/

6.0 PRE-FLIGHT ACTIVITIES

The following are some suggested activities to work on before the launch.

- Play around with APRtrak and replay the simulations. It is important to get familiar with APRtrak before the launch.

- Identify the latitude and longitude location of your station on the APRtrak maps.

- Simulate the SPRE mission using satellite tracking software and the pre-launch orbital elements.

6.1 PRE-LAUNCH ORBITAL ELEMENTS

The preliminary orbital elements below may be used to simulate or predict when SPRE will pass over your location. It can be loaded into most any satellite tracking program. For best results, be sure your simulations use the dates and time listed in the Mission Summary above.

Note: These preliminary elements are for Spartan Spacecraft only, not the shuttle. They are subject to change.

Satellite Name: SPRE-00
Satellite NORAD Number: #40000 <--(DUMMY VALUE)
Element Set Number: 1
Elements Epoch: 96014.48984950
14 JAN 1996 @ 11:45:22.997 UTC
Orbit # at Epoch: 1
Inclination: 28.4779
RA of Ascend Node: 71.7928
Eccentricity: .001131
Arg of Perigee: 189.8166
Mean Anomaly: 358.1771
Mean Motion: 15.85695266
Acceleration/Drag: .0000177
BSTAR Drag: 0

Two Line Element (TLE) Format:

SPRE-00
1 40000U SPRE-00 96014.48984950 .00001770 00000-0 00000-0 0 11
2 40000 28.4779 71.7928 0011310 189.8166 358.1771 15.85695266 18

7.0 SPRE FLIGHT OPERATIONS

During the SPRE mission ground stations will need to have APRtrak up and running and setup for SPRE at least 15 minutes before a predicted pass. When the spacecraft initially rises above the horizon the signal will sound rather scratchy. The higher above the horizon it gets the more clear the signal will become.

Only attempt to transmit after successfully receiving some SPRE packets. Received packets are displayed at the bottom of the screen on APRtrak. If you can't hear SPRE, SPRE will most likely not hear you.

Watch the map to see other stations and the spacecraft. Do not zoom in to close or you may not see other stations. Set the zoom so that you are centered on your state and can also see at least one whole state on all sides.

7.1 OPERATING INSTRUCTIONS

DO's:

- Use APRtrak Version 0.5 to listen and/or communicate with SPRE.

- Use satellite tracking software to predict when SPRE will pass over.

- Set the comment field in APRtrak to the name of your school.

- Make sure your are recording all received data to the hard disk.

- Wait until you receive SPRE transmissions before attempting to transmit.

- Watch for other schools.

DON'Ts:

- Don't zoom in too close on the map.

- Don't attempt to connect using a conventional packet terminal program. It will not allow connects and you will be clogging the frequency with wasted transmissions.

- Don't transmit until you receive SPRE transmissions.

- If your locations has been successfully relayed by SPRE, please do not continue to transmit. Give other stations a chance to get through.

8.0 POST SPRE MISSION ACTIVITIES

The following are someone suggested activities to do shortly after the SPRE mission.

- Replay collected SPRE data using APRtrak.

- Send copies of your *.HST and *.LOG data files to the SPRE Project. We will take all the data files we receive and generate a composite file. This overview of the mission will then be made available to all schools and amateur radio operators.

9.0 QUESTIONS AND ANSWERS

Hopefully this will answer the most common questions. If not, send electronic mail to the SPRE Project (see Section 11.0 below).

Q: Do I need a GPS receiver.
A: No, APRtrack is used to setup your location parameters which are transmitted to SPRE.

Q: What is the difference between SPRE and SAREX?
A: SPRE will use packet radio in the un-connected or unproto mode. This means that stations can not connect to SPRE. This should ultimately provide more throughput. This experiment involves identifying the location of the spacecraft as well as ground stations. SPRE utilizes APRtrak with a graphical interface making it more interactive and interesting. Also SPRE is an automated system and not controlled by the astronauts.

Q: How can I find out when SPRE is passing over my location?
A: By using satellite tracking software and up-to-date orbital elements. Tracking software and is available in the Internet. Orbital elements are also available on the Internet including the SPRE WWW home page.

Q: Can the SPRE Project tell me when the spacecraft will be passing over my location?
A: No.

Q: Where can I get updated orbital elements?
A: They are available at the AMSAT FTP site and home page. During the mission they will be available on the SPRE home page (URL http://w3eax.umd.edu).

Q: Can the SPRE Project tell me what kind of antenna or radio to use?
A: No.

10.0 SPRE PROJECT

Participating stations should contact the SPRE Project so that we can try to keep you updated on any changes. Send electronic mail (e-mail) to Ken McCaughey at kenneth@w3eax.umd.edu.

SPRE Home Page: URL http://w3eax.umd.edu
Anon. FTP site: URL ftp://w3eax.umd.edu/pub/spre

The End...

89. APRtrak summary for the SPRE mission

```
APRtrak summary for the SPRE mission:
=====================================

By: Bob Bruninga (WB4APR)
File: aprthlp1.txt
Date: 11-Jan-96

MISSION SUMMARY: The Shuttle orbit is 28 degrees and should be visible
by stations south of about 43 degrees latitude. It will deploy the
SPRE for about 46 hours and then retrieve it. (Beginning Sunday morning)
While it is free-flying, SPRE will be transmitting its GPS posit and a few
channels of telemetry using standard 1200 baud AX.25 but NOT in the
standard APRS format. The SPRE TNC (W3EAX) will also be available to
digipeat GRID SQUARE posits from groundstations on 145.55 MHz.

GRID SQUARE FORMAT: Stations without APRtrak or APRS may simply place
their 6 digit GRID SQUARE in the TO address of their TNC and transmit a
UI frame via W3EAX. This is done by using the TNC command UNPROTO
GGGGGG VIA W3EAX. If you don't know your 6 digits, use GGGGAA. Set your
BEACON to every 10 seconds or so using the BEACON EVERY command. (This
will not work on many TNC's that always send their BEACON to the address
of BEACON instead of whats in the UNPROTO command). If you use the
BEACON, PLEASE make your BText as SHORT as possible. A suggested format
might be: "25W into 13db beam." When you see your packet digipeated,
STOP transmitting!

If your TNC only sends beacons to BEACON, then you will have to place your
TNC into converse and TYPE your beacon each time. In this mode,
the UNPROTO TO address with your grid square WILL be used. Please do not
send a beacon any more often than once every 10 seconds and LISTEN between
them to see if you got digipeated. Once you see yourself, STOP and let
others have a chance...

USING APRtrak: APRtrak is a significantly modified version of APRS that
will parse the special SPRE posits and telemetry. Be sure you have
version 0.5. APRtrak, like APRS, has a special SPACE mode that will
automatically transmit your GRID-SQUARE posit and will display all such
packets received on the map.

DIFFERENCES BETWEEN APRtrak and APRS:
* APRtrak was donated to the AMSAT software library. Register with AMSAT.
* APRtrak plots the movements of up to 9 satellites using KEPS.
* APRtrak ignores most terrestrial APRS posits by ignoring all packets
that use MORE than one digipeater in their path.
* APRtrak will decode the SPRE position and TELEMETRY. APRS will not.
```

* Both have SPACE mode. (alt-SETUP-MODES-SPACE) which:
- automatically inserts your GRID-SQUARE in your transmitted POSIT.
- THe period between each POSIT doubles after each transmission to minimize QRM for un-attended stations
- If the SPACE DIGIPEATER is heard, then the POSIT period is reset back to a minimum value.
- If your OWN digipeated packet is SEEN on the downllink, then your POSIT period is FORCED to 9 minutes and a CONGRATULATIONS message is displayed!
- APRtrak places the TNC in MCOM ON. This way it will not only display all packets, but this mode also enables the automatic LOGGING of ALL packets.

OPERATIONS: Be sure to PRACTICE before the SPRE mission. APRtrak and APRS are a totally different approach to packet and take some getting used to... Most APRtrak commands are single letter commands. Many display an additional menu of single letter commands. F1 brings up the HELP menu. Although you may find some APRS activity on your local area APRS frequency (try 145.79) remember that APRtrak will ignore APRS packets using more than one DIGIpeater. Use the OPS-UNPROTO command to enter the call of the local digipeater; then practice... Find someone else that is in range of the same digi and see if you can see his posit.

Another way to practice is to tune in 145.55 and monitor MIR. DO NOT SET SPACE mode however, UI packets are NOT desired via MIR. Without SPACE mode you will only transmit a packet about once every 10 minutes. If you want to be sure that you dont transmit to MIR, toggle your xmter off using the CONTROLS-XMT command.

TROUBLES: APRtrak tries to properly configure your TNC, but the manufacturers all have different command sets. Be sure to set up your TNC for 9600,N,8,1. If you see garbled packets, check your manual and be sure to use the proper PARity command to set for NO parity. To talk to your TNC while APRtrak is running, use the OPS-COMM command. (Experienced APRS users should be careful to NOT hit O-C-T out of habit, because that will place your TNC into TRANSPARENT mode!)

SPRE SET UP: Although APRtrak will decode the raw telemetry values for SPRE, it needs to have the SPRE telemetry equations loaded before it can display the proper engineering units. Use the FILES-LOAD command to load the file SPRE.BK. This tells APRtrak to use the SPRE telemetry equations. USE THE ALT-T command to see the telemetry page...

A BIG problem with some TNC's is that they monitor their OWN outgoing packets even if they are NOT digipeated. This will automatically give you the CONGRATULATINS message and cancel further transmitting EVERY time you transmit a single packet in SPACE mode. Be sure that MXMIT or whatever is the command on your TNC is OFF. If your radio echos the XMT audio back in to the TNC, this problem will also occur. If you cannot get rid of your own packets, then disable SPACE mode but be sure that GRID-TO is enabled. I think this is on the CONTROLS menu somewhere. You can still force your POSIT or BEACON to go out every now and then using

the XMT-POSIT command.

BEACON TEXT. In APRS or APRtrak, your default BEACON will be your software version number. That is a WASTE of valuable bandwidth. Be sure to change it to something SHORT and meaningful using the alt-BEACON command. Mine will probably say "25W into 13 dB." or something like that. NO NEED TO SAY your call, or your location, Thats already in the packet.

90. APRtrak - SPRE part-II

Newsgroup: rec.radio.amateur.space
Date: 1996-01-13 00:00:00 UTC

APRtrak - SPRE part-II
======================

By: Bob Bruninga (WB4APR)
File: aprthlp2.txt
Date: 11-Jan-96

Once you have APRtrak unzipped, loaded, and working with your TNC, and have READ all the files in the README directory, you will be able to rapidly move between the APRtrak screens to see the packets being parsed using several single Key commands:

SPACE BAR displays the map. Use PgUP/DN, HOME and arrows to ZOOM

L - LATEST. Will only display the LAST packet seen per station.

P - POSITS. Holds the posits of any stations reporting same.

A - ALL BEACONS. This is the chronological page of all NEW packets. It does NOT update in real time, so you have to keep pressing "A" each time you want to see the latest.

V - This is a conventional scrolling text display of raw packets

D - DIGIPEATERs. This display shows the packet headers being used.

alt-T - This page displays the telemetry.

Z - HORIZON. This is an interesting display showing what the SKY looks like from your backyard or wherever the MAP cursor is. To see the default horizon (Annapolis), center the map on your station and press Z. You can customize this HORIZON following the steps in SYSTEM\HORIZON.DAT.

alt-F FAST. This will make the satellites move FAST. It is interesting to watch on the HORIZON display.

NOTE!!!! I just discovered that APRtrak defaults to Mcom OFF. This will prevent you from capturing the REFLEX and other non APRS packets! Without Mcom ON, you also will not see the full packets on the ALL PAGE. To toggle MCOM ON, use the APRtrak CONTROLS-MCOM command.

APRtrak will then try to set MCOM on in your TNC. AEA TNC's use a different command which you will have to set yourself using the OPS-COMM mode to talk to your TNC directly.

Not only does MCOM in APRtrak turn on MCOM in your TNC, but within APRtrak it also ENABLES the saving of ALL packets including the HEADERS on the ALL page and subsequently that is what is saved in the LOG files. So even if you can't get MCOM ON in your TNC, be sure it is ON in APRtrak. When it is ON you will see it in the CONTROLS display (Hit the TAB key to show it).

Hope to see you on the map!

91. APRtrak and SPRE part III

APRtrak and SPRE part III
==========

By: Bob Bruninga (WB4APR)
File: aprthlp3.txt
Date: 11-Jan-96

At the bottom of this file are the latest KEPS for STS-72 and MIR. In
APRtrak, use the FILES-KEPS command to update your KEPS from this file.

NOTES:
1) Use a DOS editor to change one of the existing satellite object
numbers in APR.ORB to the object number for STS-72. That is 23762
2) Now use the FILES-KEPS (NASA format) to update from this file.
3) Do NOT use the AMSAT format for updating, because it appears to
wipe out all the satellites and only bring in the new one...
4) If you accidentally wipe out all your satellites, you can copy the
APR.BAK file to APR.ORB and you will be back in business...

Be sure your DATE, TIME and TIME ZONE are correct.

Once SPRE is deployed, do NOT update your KEPS if you want to keep
tracking SPRE. If you want to update the shuttle KEPS, then use an
editor to change the name from STS-72 to SPRE and give it a fake OBJ
number. Then change another satellite to 23762 and do an update. But
remember that the shuttle does have to come back to the SPRE position to
pick it up.

We finally can do it...

DL0ART/am - The Nienberge Amateur Radio Group (Germany)
plans another balloon launch on Sunday, 01-14-96.

This is our fourth flight and will be the first one
carrying
a "user access". We`ll have a 70 cm/2 m crossband repeater
aboard. All hams are invited to use this facility. Please,
show appropriate ham spirit while using the repeater!

Planned ARTOB launch 01-14-96:

Launch: # 4
Launch date: 01-14-96 (Sunday)
Launch time: 1200 UTC
Launch site: Nienberge near Muenster, Germany, JO32SA

Call sign: DL0ART/am
QRG/mod.: (1) Telemetry beacon: 145.200 MHz (F2D &
F2A)
(2) Crossband repeater (F3E):
Uplink: 432.570 MHz
Downlink: 144.470 MHz
(3) RX for remote control on 70 cm and 10 m

Power: (1) 2 W
(2) 2.5 W

Antennas: (1) groundplane
(2) big wheel - one for 70 cm, one for 2 m
(3) 70 cm: groundplane / 10 m: lamda/4

Diameter ballon: ca. 8 ft

Talk back of DF teams and ground control via repeater
Muenster,
DB0PD (R 84). Reports are welcome, please call DL3YBQ or
DL9QJ.
Or send QSL to DL9QJ via bureau, via PR or via Internet.
Each
report will be confirmed by a special QSL card of the
balloon.

Any suggestion or response is always welcome!
Best 73,
Oliver

>spread spectrum double secret spy stuff?

No such luck, it's plain old ordinary cable TV leakage. Cable channel
18 is right smack in the middle of our band. Complaints about interference
to amateur operations usually fall on deaf ears at the cable company.
But if you tell them they're interfering with your listening to aircraft
traffic on your scanner, cable trucks will be scrambling around your
neighborhood looking for the leak. The FCC isn't willing to give us
any protection, but they still get serious with cable systems interfering
with aircraft frequencies. They recently shut one cable system down
for excessive leakage that was interfering with aircraft. That's big
bucks lost, so cable systems get serious when they get a report of
leakage heard in the aircraft band, and of course, a leak is a leak,
and spills Ch 18 into our bands just the same as it spills another
channel onto the aircraft frequencies. When they tighten up the system,
both noises go away.

Gary

97. Hamtronics Weather Satellite Receiver

Newsgroup: rec.radio.amateur.space
Date: 1996-01-13 00:00:00 UTC
From: Chuck Freeman <cfreeman@sound.net>
Message-ID: <4d7gad$sr8@guitar.sound.net>
Source record: 23264

Has anyone out there tried the Hamtronics Weather Satellite Receiver. If so how well does it work and does it provide better pictures from the NOAA series of satellites compared to a normal narrow band scanner. Your help would be appreciated.

73's Chuck WD0ASJ

98. Re: Rs-15 Antennas Turn style type.

Newsgroup: rec.radio.amateur.space
Date: 1996-01-14 00:00:00 UTC

Follow the plans in the ARRL Handbook. They work just fine.
A more detailed plan appears in the ARRL Antenna Handbook.

=========

MONDAY JANUARY 15, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* KANTO FIREBALL *
==================
Japanese newspapers and TV news reported that a fireball appeared over
Saitama and Ibaraki prefectures about 16:20 (UTC+9h) on January 7.
The fireball travelled in an approximately easterly direction. An
explosive sound was reported. The event was captured on photo/video
recording by the residents. A probable fragment (5cm, 60g) of the
meteorite also was found.

[Info via Yoshiro Yamada]

* MIR NEWS *
============
Thomas Reiter aboard the Mir orbital complex reports that the power supply
used for some of the Amateur radio equipment on Mir has failed. An old
power supply was installed, but it is only capable of handling the old
ICOM transceiver and one TNC. The Digital Voice Module has also failed,
so there will be no more automatic voice recordings in the near future.
All four fuses in the two connected transceivers blew, and only two spare
fuses are left to run the ICOM.

[Info via Dave Larse, N6JLH]

* SKN NOMINATIONS DUE *
======================
AMSAT has already received a number of "Best Fist" nominations from the

24th annual Straight Key Night on OSCAR, held 1 January 1996. If you participated and haven't yet nominated someone you worked for "Best Fist" honors, please take a moment to do so now.

Nominations should be addressed as follows:

Internet : w2rs@amsat.org
Packet : W2RS @ GB7HSN.#32.GBR.EU or W2RS @ WA2SNA.NJ.USA.NA
(whichever is closer to you)

or via "snail-mail" to W2RS' Callbook address.

Thanks to all who participated.

[Info via Ray, W2RS]

* SPACE SHUTTLE FREQUENCIES *
==========
The space shuttle Endeavour was launched successfully on 11-Jan-96 at 09:41 UTC. The following is a list of downlink frequencies being used during the mission:

243.000 MHz (AM) Emergency Voice Channel
259.700 MHz (AM) Secondary Voice Channel
279.000 MHz (AM) EVA Voice Channel
296.800 MHz (AM) Primary Voice Channel
2041.900 MHz Data
2106.400 MHz Data
2217.500 MHz Data
2287.500 MHz Data
15003.400 GHz Data

Retransmission of space shuttle air-to-ground communications can be monitored on the following frequencies:

147.450 MHz Goddard Amateur Radio Club
3860 kHz (USB) Goddard Amateur Radio Club
7185 kHz (USB) Goddard Amateur Radio Club
14295 kHz (USB) Goddard Amateur Radio Club
21395 kHz (USB) Goddard Amateur Radio Club
28650 kHz (USB) Goddard Amateur Radio Club

During this mission, the six person crew will retrieve the Japanese Space Flyer Unit (SFU) spacecraft. SFU's downlink frequency is 2263.6018 MHz.

Also during this mission a spacecraft called the Spartan 206/OAST Flyer will be deployed by the shuttle crew for about 48 hours of the mission. This satellite has a FM AFSK 1200 baud packet radio transmitter on board that will downlink on 145.550 MHz.

100. Trouble Hearing RS-15

Newsgroup: rec.radio.amateur.space
Date: 1996-01-14 00:00:00 UTC
From: jrybak@mesa5.Mesa.Colorado.EDU
Message-ID: <4daag4$h6d@mesa5.mesa.colorado.edu>
Source record: 23169

I can hear the RS-10 and RS-12 downlinks very well on 10 meters. I do

not hear RS-15 very well. Sometimes the beacon is strong but then it disappears. The very few QSO's I hear on RS-15 usually are quite weak. Does RS-15 have some problems or am I not doing something right?

Thanks.

Jim Rybak W0KSD

101. STS-72 Does this mission have SAREX???

Newsgroup: rec.radio.amateur.space
Date: 1996-01-14 00:00:00 UTC
From: Francisco Costa <fcosta@mail.telepac.pt>
Message-ID: <4d9kok$h1c@vivaldi.telepac.pt>
Source record: 23265

I think the answer is NO (but i want to check).
I look everywhere i know and can't see no reference to SAREX on this mission. But, because is (at least) one radioamateur on board - Brian Duffy, N5WQW -, i want to be sure.

Thanks in advance.

73's F.Costa CT1EAT

P.S. By the way, do you know where i can find a list of 1996 SAREX missions? (i couldnï¿½t find it on SAREX web page!!!???)

102. 1996 SAREX flights are:

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

As I understand it, IC's are giving a "industrial" or "military" rating
at production time depending on their performance in a hostile
environment. Digikey, Mouser, etc. all carry industrial-grade ic's -
you'll probably have to contact the manufacturer to find sources for
military-grade.

Matt

Hello to all:

Come a take a look at my new web page. I have been working on it for the last 4 weeks. I have lots of thing that you will like. Some of the things that I have are: MODs, Swap Shop, Dfw repeter list, comment page, links to other good ham pages, call looks ups (updated by the sec), radio pricing, Links to QRZ,FCC,HRO, and many more. If you are a ham and would like you web page added to my list just send me e-mail. Please tell me what you like and dislike about the page. I want all types of comments. Hope you like what I have.

>I look everywhere i know and can't see no reference to SAREX on this
>mission. But, because is (at least) one radioamateur on board - Brian
>Duffy, N5WQW -, i want to be sure.

Regretably no. Brian's one of my favorite astronauts and the SAREX team
really wanted to try to get SAREX assigned to this mission. Others on
the flight who have expressed an interest in amateur radio include
Winston Scott and Koichi Wakata.

But the SAREX team can only support so many flights each year, you know -
things like real jobs get in the way.

Here's the list of upcoming 1996 SAREX flights:

STS-76 March SAREX-M
STS-78 June SAREX-C
STS-79 August SAREX-M
STS-80 November SAREX-C
STS-81 December SAREX-M

Check out the JSC amateur radio club web site. It's got a list of the
astronauts who have been assigned to these flights, their call signs, and
more details:

Stuart:
The radio equipment required to receive and demodualate the shuttle directly is beond the scope/price/etc. of individuals. I don't remember all the details but it is microwave/multiplexed/digitized/transponded through several satellites. I don't know where you are located but the shuttle audio is retransmitted on several HF frequencies from Maryland and Texas. Try 3.860, 7.185, 7.225, 14.280, 14.295, 21.395, 26.650. good luck. These are single sideband modulation.

Hi,

I am looking for African Stations who like to have a sked with me
via the satellite RS-12/13 (maybe RS-10/11 and/or RS-15 if you like?).

If you don't have any experience with RS-12/13 then I would be happy
to give you all instructions you need. All what you need to work via
the satellite RS-12/13 is your normal HF equipment. No special radio
or antennas or training necessary!

BTW: If you are not from Africa and would like to have a sked with me,
don't worry and feel free to drop me an e-mail!

RF: The Analog Analysis Program

by Academic Technologies

RF is a new inexpensive circuit simulation sw package for
Windows, Windows 95 and Windows NT. It is primarily
intended for Radio Frequency design but is applicable
to all frequencies.

Come and have a look, visit out Web site at:

http://www.onthenet.com.au/~academic/Welcome.htm

or download the readme.txt and rfdemo.zip demo
version from:

ftp.onthenet.com.au in /pub/acdemic/

or mail us at:

academic@onthenet.com.au

Briefly RF has the following functions:

Tools
Convert between S,Y,Z and ABCD two port parameters
Design Butterworth and Chebichev Filters
Design and analyse coil and wire inductors
Sophisticated Microstrip design and analysis
Design parallel, series resonators and LC filters
Complex/Polar calculator

Compnents
Capacitors (includes parasitics)
Resistors (includes parasitics)
Inductors (Q included)
Curve fitted S parameter devices and whole circuits (fit types:
rational, polynomial, spline, ls, linear)
OpAmps
Transmission Lines (ideal and lossy, open and shorted)
Transformers (ideal and non ideal, leakage inductances and resistances)
FETS (all parasitics)
Tapped Inductors (Q and parasitics)
Beta controlled current sources (all parasitics)
VCCS
Mutual inductors (all parasitics)
Source and Loads
DC source

Analysis Facilities
Swept frequency (Full and Nodal)
Single frequency component tolerance
Swept frequency component tolerance
DC bias point analysis
Pulse analysis (Fourier simulated)

Text Output
Transducer gain
Linvil c stability
Stern k stability
Input impedance
Output impedance
Input admittance
Output admittance
Voltage gain
S11, S12, S21, S22 S parameters
Input reflection coefficient
Output reflection coefficient
Maximum transducer gain possible
Source admittance/impedance to obtain Gtmax
Load admittance/impedance to obtain Gtmax

Graphical Output
Voltage Gain
Transducer gain
Input impedance
Output impedance
S11, S12, S21, S22 S parameters
Input reflection coefficient
Output reflection coefficient
Pulse time trace
Multiple "tagged" plots
Autoscaling or manual scale
Auto cursor tracking (warps to and displays the nearest
points) or absolute
Points or line traces

Is Oscar 10 dead or do I have a corrupted batch of keps? My tracking program indicates that it has been high over the Pacific ocean the last few days and from my Seattle QTH I should be hearing the beacon loud and clear. Can't hear a peep! I have heard Oscar 13 and others, but no AO10. What's happening...any clues? 73 de John, KI7JB.

145.550 MHZ simplex is the ham frequency invariably used by MIR cosmonauts. The packet digipeater/mini-bbs is left on most of the time when the cosmonauts are too busy to "talk" on the radio. I hear their packet bursts several times a day normally, and only hear them operating voice once a month or less.

121. NORAD Two-Line Orbital Element Set: Space Shuttle (96014.02418293)

Newsgroup: rec.radio.amateur.space
Date: 1996-01-18 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4dmm9g$eq5@blackbird.afit.af.mil>
Source record: 23188

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

John,

Currently Mir is transmitting packet and sometimes voice on 145.550 MHz,
narrow FM. They were running some voice tape recordings for a while on
145.800 MHz, but they stopped because they are having radio problems
right now. But try 145.550 MHz.

By the way, nice last name!

I am looking for information about cases involving legal disputes between local government, city to be exact, and private industry. I am having trouble getting a local township to agree to let me raise my business tower to 500 feet. They have been stalling me for over a year now. Any information would greatly be appreciated.

Please either post information under this article or preferably e-mail me at 'dragottj@milwaukee.tec.wi.us'. Thanks.

Integrated circuits are made in much the same way as a color picture in a newspaper is created. The picture consists of hundreds of dots of varying size and color in a several square inch area, but one doesn't place each dot individually. One creates a master pattern and PRINTS it on the page. In a similar fashion, integrated circuits are "printed" as complex patterns of chemicals and connections on a silicon substrate.

Any further explanation is beyond the scope of this newsgroup. For more information, try asking in the sci.engr.semiconductors newsgroup.

>Thank you!
> Big Dave

Two loops, one wavelength each at right angles. Feed them 90 degress
apart, electrically (1/4-wavelength). Balanced feed (twinax) is best
if good balance and circularity is to be achieved. The feedpoint needs
a balun to properly connect to the feedline. My recollection is that the
twinax is 90 Ohms and that the feedpoint needs 600V Mica caps at about
20-30 pf to achieve a good match. I believe that the eggbeater is slightly
"squashed" for best circularity and omnidirectionality. There is no
connection at the crossover points (top) and the whole thing is fed at
the bottom. A metal upright can be used for support but the top and
bottom are insulated from the vertical mast.

A crossed reflector underneath provides additional gain overhead without
too much loss towards the horizon.

131. Re: Which AZ-EL rotor is best?

Newsgroup: rec.radio.amateur.space
Date: 1996-01-19 00:00:00 UTC
From: Gary Watts <gwatts@qni.com>

Source record: 23198

The only problem with the 5400 rotors I had are
1 There IS NOT a good weather sealed. It is just a GLOB of grease to
attempt to keep the moisture and other elements out...
2. Is there Limit switches on the AZ rotor ?
If there is then the ones on my AZ rotor did now work from day one
The limit switch seems to work on the EL rotor ok

Other than SERVICE I have been happy with this rotor

Source record: 23199

Oscar 10 has been "brain dead" for several years due to radition damage to
the computer. This leaves the batteries and charging system to radomly draining or
charging. When the bird finally builds enough power, the transponder works.
You might see a warning in some bulletins saying "don't use AO-10 if the
beacon is fm'ing." This indicates a low charge state.
As for not hearing the beacon at all, the loss of the computer means no
attitude control either. The antennas may be pointed away from earth.

ARLS001 Ham radio power supply aboard Mir fails

ZCZC AS09
QST de W1AW
Space Bulletin 001 ARLS001
From ARRL Headquarters
Newington, CT January 19, 1996
To all radio amateurs

SB SPACE ARL ARLS001
ARLS001 Ham radio power supply aboard Mir fails

German cosmonaut Thomas Reiter, DF4TR/DP0MIR, aboard the Mir orbital complex, reports that a power supply used for some of the spacecraft's ham radio equipment failed on New Year's Eve. The remaining, older power supply is only capable of powering the old Icom 2-meter transceiver and one 1200-baud TNC. The digital voice module also has failed, so there will be no more automatic voice recordings in the near future.

Reiter reports all four fuses in the two connected transceivers have blown and only two spare fuses remain. Last month, Reiter used the digital voice recorder, built by Thomas Kieselbach, DL2MDE, to broadcast holiday messages. The primary transmitting frequency is 145.800 MHz.

Recently, the cosmonauts on Mir unpacked new Amateur Radio equipment delivered by rocket, including a 70-cm FM transceiver and 9600-baud packet gear.

Reiter was philosophical. ''Well, at least we can be reached and still can talk with the world,'' he said in a message to Dave Larsen, N6JLH.

1.100 - 1.400 ghz PAL Video Bugs *Very Hot in
England/France/etc*
2.400 - 2.500 ghz PAL Video Bugs *Very Hot in
England/France/etc*
3.500 - 4.500 ghz PAL Video Bugs *Very Hot in
England/France/etc*

430 - 550 mhz Popular French Video/Audio Bugging System
950 - 2500 mhz Popular French Video/Audio Bugging System
700 - 900 mhz Popular Italian Audio Bugging System

"Tactical" Bugs

225 - 400 mhz "Throw away" bugs (10uw-300mw Beer can bugs)
290 - 330 mhz Micro-powered Bugs (5uw-10mw Cigarette Butt Bugs)

30 - 500 mhz Tactical Repeaters (75mw-300mw)
285 - 400 mhz Tactical Repeaters (50mw-10watts)
100 - 152 mhz VHF Tactical Repeaters (300mw-25watts)
135 - 174 mhz VHF Tactical Repeaters (300mw-25watts)

VLF and Carrier Current Type Bugs

9khz - 490 khz Carrier Current 47 CFR 15.219 Auth (250 microvolts)
490khz - 1.705 mhz Lossy Cable 47 CFR 15.221 Auth (1000 microvolts)
450khz - 30.00 mhz PLA Systems 47 CFR 15.207 Auth (30 mv@ft/30ft)

3 - 200 khz 300 mw High Grade Pro Bugs (over 500$ each)
100 - 200 khz 50-100 mw Older Bugs
120 - 200 khz 30-50 mw Pre 1990 intercoms
200 - 300 khz 30-50 mw Post 1990 intercoms
300 - 400 khz 250-400 mw TELCO Line transmitters (355khz popular)

300hz - 30 khz Cable TV Carrier - Hardwired microphones
30khz -300 khz Cable TV Carrier - Coaxial Bugs

100 - 450 khz Threat Window #1 Most CC Bugs
3khz - 3 mhz Threat Window #2 Expensive "Pro-Grade" Bugs
5khz - 32 mhz Threat Window #3 Popular WJ Carrier Current Rcvr
3khz - 50 mhz Threat Window #4 Realistic Threat Window for Telephone Wire
15mhz - 70 mhz Threat Window #5 Audio/Video "Micro-Wire" RF circuits

WECO Bugs "boosted/ultrasonic audio" found on Power/CATV/Telco lines

64kbps to 1.5mbps Digital Bugs T-Carrier-Lo (T-1 and Below)
1.5mbps to 50mbps Digital Bugs T-Carrier-Hi (T-1 and above)

2.048mbps Digital Bugs Definity Circuit Pack Bug
32mbps Digital Bugs TMS Channel/Backplane bridge
Designed to transmit on CC or Microwave ISM Spread Spectrum (2.4-6.0ghz)

VLF Devices

25khz - 90khz Tape Recorder Bias Osc-Low End (35-45khz Common)
80khz - 145khz Tape Recorder Bias Osc-Mid Range (88.2, 96, 100khz Common)
100khz - 325khz Tape Recorder Bias Osc-Pro Grade (100, 150, 300khz Common)
40khz - 50khz Tape Recorder DAT/Hi8 (44.1/48khz Common)

8khz - 35khz Recorder Audio Servo Noise (10-20khz Common)

7khz - 35khz Video Camera VLF Detectable emmisions
15.750 mhz Common NTSC Video Camera
15.734 mhz CCD/PCB Video Camera (very easy to detect)
15.625 mhz Common Video Camera

Also, be aware of ultrasonic/audio emmisions from most VLF devices.
(Utilize a EOD/Bomb Tech Stethoscope, and Ultrasonic Spectrum Analyser)

Spread Spectrum/Hopping Bugging Frequencies

Legit Industrial Equipment (very inexpensive)
902 mhz - 928 mhz ISM band A (Very Popular)
2400 mhz - 2484 mhz ISM band B (Very Popular)
5725 mhz - 5850 mhz ISM band C
10500 mhz - 10550 mhz ISM band D
24075 mhz - 24250 mhz ISM band E

SS Amateur Radio Bands Often used for eavesdropping (very inexpensive)
50 mhz - 54 mhz 6.00m Amateur Radio Equipment (STA)
144 mhz - 148 mhz 2.00m Amateur Radio Equipment (STA)
222 mhz - 225 mhz 1.25m Amateur Radio Equipment (STA)
420 mhz - 450 mhz 70cm Amateur Radio Equipment (47 USC 97.305)
902 mhz - 928 mhz 33cm Amateur Radio Equipment (47 USC 97.305)
1240 mhz - 1300 mhz 23cm Amateur Radio Equipment (47 USC 97.305)
2300 mhz - 2450 mhz 13cm Amateur Radio Equipment (47 USC 97.305)
3300 mhz - 3500 mhz 9cm Amateur Radio Equipment (47 USC 97.305)
5650 mhz - 5925 mhz 5cm Amateur Radio Equipment (47 USC 97.305)

SS Amateur Radio Bands Occasionally used for eavesdropping
10.00 ghz - 10.50 ghz 3.0cm Amateur Radio Equipment (47 USC 97.305)
24.00 ghz - 24.25 ghz 1.2cm Amateur Radio Equipment (47 USC 97.305)
47.00 ghz - 47.20 ghz 6.0mm Amateur Radio Equipment (47 USC 97.305)

SS Amateur Radio Bands Rarely used for eavesdropping (very expensive)
75.50 ghz - 81.00 ghz 4.0mm Amateur Radio Equipment (47 USC 97.305)
119.98 ghz - 120.02 ghz 2.5mm Amateur Radio Equipment (47 USC 97.305)
142.00 ghz - 149.00 ghz 2.0mm Amateur Radio Equipment (47 USC 97.305)
241.00 ghz - 250.00 ghz 1.0mm Amateur Radio Equipment (47 USC 97.305)
300.00 ghz - Light (3 Thz) Amateur Radio Equipment (47 USC 97.305)

Note: Most commmon spread spectrum/hopping bugging equipment will hop at speeds
between 100 and 50,000 hops per second. Equipment is readily available that
hops even faster (100,000 to 300,000 hops per second). Dwell times can be as small as 1us (one widely used military system uses a dwell time of 3-5us)

Outband Equipment
ANY Television broadcast or Cable TV frequency
ANY FM radio broadcast frequency
ANY Paging or Beeper frequency
ANY Cellular Telephone frequency

820 mhz - 960 mhz Modified (902-928) Cordless Telephones
Modified Amateur Radio Equipment (can be on ANY frequency)

Keep in mind that wideband (non-ISM) Spread Spectrum/Hopping Bugs are very
difficult to detect(even if you are within a few feet). Watch for carrier feed-through, and "Noise Floor Humps".

All Spread Spectrum devices are detectable

Once Spread Spectrum/Hopping Bugs have been located (on the RF spectrum) all
that can be done is to locate the sourse of the emission... it is virtually
impossible to demodulate a SS signal unless you have access to the key.

Also, a 500mw ISM device can easily have an effective range of over 20 miles.

Look for spectral anomalies (humps) on the Spectrum Analyzer, and back up
with a Compressive receiver.

Commonly Used Law Enforcement Bugging Frequencies

37.000 - 952 mhz FCC Surveillance Blanket Authorization

47 CFR 90.19 "Physical surveillance, stakeouts, raids..."
Straight AM/FM, FM-Subcarrier, SSB, Spread Spectrum, and Hoppers.
If encrypted, it usually uses in-band voice inversion or DES.
(Normally well under 2 watts... most under 35-150mw)

148 - 174 mhz
135 - 250 mhz Out-band Wireless Microphone
174 - 216 mhz In-band Wireless Microphone
350 - 440 mhz Common Video Freqs
380 - 930 mhz Wide Band Hoppers
806 - 824 mhz
851 - 869 mhz
905 - 930 mhz Popular Audio/Video Band

1.4 - 1.5 ghz Common Video Freqs
1.7 - 1.9 ghz Common Video Freqs (1.710 - 1.755 REAL Popular at
1/10 watt)
2.4 - 2.5 ghz Common Video Freqs (2.400 - 2.450 REAL Popular)
5.7 - 5.9 ghz Common Video Freqs (5.725 - 5.850 REAL Popular)
8.5 - 10.8 ghz Common Video Freqs

173.075 - LOJACK Auto tracking system beacon (200ms burst every second)

Police Speed Enforcement Radar
10.450 - 10.600 ghz X-Band
11.488 - 11.628 ghz RD Detector
22.976 - 23.256 ghz RD Detector-2nd Harmonic
24.050 - 24.250 ghz X-Band
33.400 - 36.000 ghz Ka-Band
700nm - 1100nm Laser Threat

Electronic Article Suveillance/Anti-Shoplifting Systems
8.10mhz - 9.30mhz Checkpoint (Hi-Q Tags) 8.2mhz Common
57.75khz - 58.75khz Sensormatic (Magnetic) Books, CDs, and Tapes
915mhz and 1830mhz Knogo (Microwave Resonant) Adhesive Labels

25 - 50 mhz "Bumper Beepers" (38 - 47 mhz very popular)
135 - 170 mhz "Bumper Beepers" (150-170 mhz very popular)
450 - 512 mhz "Bumper Beepers"
903 - 904 mhz "Bumper Beepers"
904 - 912 mhz "Bumper Beepers"
918 - 926 mhz "Bumper Beepers"
926 - 927 mhz "Bumper Beepers"

WARNING:
The area between 900 mhz and 6 ghz is EXTREMELY DANGEROUS as
the eavesdropping equipment in that range is inexpensive, low power,
and highly directional.

Additionally, most TSCM people will not check frequencies above
1.0/1.5 ghz or
3 ghz (because the equipment is too expensive for them to buy).

I have seen surveillance video tapes of TSCM inspections where the video
cameras (Watec), microphones (Sony), and microwave RF transmitters (AID -
2.4ghz) were never detected by the inspectors (using 1ghz AVCOM Spectrum
Analyzers).

Surveillance Satellite (TK-Keyhole) Frequencies
Note: Mostly Wideband Spread Spectrum/LPI channels

420mhz - 450mhz
1.2ghz - 1.4ghz
1.7ghz - 1.9ghz (1.76-1.84 real active)
1.9ghz - 2.2ghz (2.115 real active)
4.9ghz - 5.0ghz
7.5ghz - 8.3ghz
10.6ghz - 12.6ghz (11.7-12.2 active)

23.6ghz - 24.0ghz
25.5ghz - 25.7ghz
22.8ghz - 33.5ghz
42.5ghz - 47.0ghz
50.3ghz - 52.4ghz
78.0ghz - 85.5ghz
86.3ghz - 98.3ghz (86-92 real active)

Commonly Used by Federal Agencies for Bugs, Wireless Microphones,
and Body Wires (also 138-220 mhz, and 399-420 mhz, under 25-50 mw).

409.4000 Federal Shared

960-1215mhz Spread Spectrum Systems (Wideband)

Generally Recognized Federal Bug/Spy Bands
Primary - 25-50mhz, 135-175mhz, 225-440mhz, 1710-1950mhz, 8.3-12.5ghz
Secondary - 890mhz-5.50ghz, 7.0-9.5ghz, 10-39.6ghz

Also, Wide Band Frequency Hopping centered on various UHF-TV channels
(ie: 510 or 670 mhz with a hopping width of +/- 25 mhz)

Keep in mind that the federal government can use virtually any
frequency between DC and light.

Band Width Resolution and Filters

Examine the spectrum with the following BW resolutions/filters:

Utilize all BW resolutions/filters between 5hz - 200mhz (depending
on band being checked)

Note: A programmable digital spectrum analyzer should be used!
(1/3/5/10/15/20/25/30/50/75/100/150/200... Sequence is prefered)

BW Res - Usage/Primary Function
100/200 mhz - Resonate Cavity Bugging Devices/SIGINT Devices
125/35/8mhz - Resonate Cavity Bugging Devices/SIGINT Devices

50/20/10mhz - Diplomatic/Intelligence Microwave Bugs
40/20/10mhz - Diplomatic/Intelligence Microwave Bugs

13/16/20mhz - Microwave Wideband
11/12/13mhz - Microwave Wideband
.5/1/2/5mhz - Microwave Wideband (Burst Bugs)
18/26/36mhz - Satellite Wideband (Video)
2/4/6/8 mhz - Microwave Wideband (Video)
3/6/12 mhz - Microwave Wideband (Video) - Common
.5/1/3 mhz - Microwave Wideband (Video/Burst/Pulse)

1.5/.75 khz - Frequency Hopping Bugs - VERY Common
.4/.2/.1khz - Frequency Hopping Bugs - VERY Common
3.2/6.4 khz - Frequency Hopping Bugs - VERY Common
10/20/25khz - Frequency Hopping Bugs - VERY Common
50/75 khz - Frequency Hopping Bugs - VERY Common
100/250 khz - Frequency Hopping Bugs
300/500 khz - Frequency Hopping Bugs
1/2/4/8 mhz - Frequency Hopping Bugs

300/250 khz - Regular Wide Band Broadcast FM
150 khz - Narrowband Broadcast FM Audio, Television Audio
280 khz - Narrowband Broadcast FM Audio, Television Audio

200/150 khz - Commercial Wireless Microphone - High Grade
150/100 khz - Commercial Wireless Microphone - Concert/Broadcast Grade
58/77/84khz - Commercial Wireless Microphone - Typical Body Wire

50/60/75khz - Commercial Wireless Microphone - Typical police device
8/25/50 khz - European/Japanese Industrial Bugging Devices

50/30 khz - Wideband FM two-way communications (ie: Cellular
Telephone)
16/15/6khz - Normal FM two-way communications
3/6/8/12khz - Narrowband Commercial - Voice
1/3.2/6khz - Narrowband (Marine, HF, etc...)

120/9/1 khz - Narrowband (Bias Osc./Video Cameras/SIGINT)
30/750/500hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
56/75/100hz - Narrowband (Bias Osc./Video Cameras/SIGINT)
30/150/200hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
250/300 hz - Narrowband (Bias Osc./Video Cameras/SIGINT)

300/250 hz - Narrowband OOK/FSK/Data, etc...
300/250 hz - Narrowband OOK/FSK/Data, etc...

Subcarrier Detection:

10 - 500 khz - Most Commonly Used Subcarriers
30 - 150 khz - Typical Broadcast FM Subcarrier (FMSubC)
19/27/38 khz - Typical Stereo Broadcast FM Subcarrier (FMSubC)
67 khz - Typical Musicast/Musak Broadcast FM Subcarrier (FMSubC)

2 - 10 mhz - Audio Subcarriers often used with Video (4.2-8 mhz
common)

5khz - 950khz - Realistic Subcarrier Threat (Audio)
1mhz - 15 mhz - Realistic Subcarrier Threat (Video)

Summary (this will catch 99.99% of all Non-Intell/Diplomatic RF bugs)

All TSCM Inspections should include the following frequencies:
(Expect to see less than 10-35 mw maximum at the TX antenna)
(Do not expect the signal to be present for more than 20uS-100uS)

To find RF transmitters a search grid of 15 foot by 15 foot (or
less) should be used.

Also, all phone rooms, riser closets, demarcs, boots, etc. MUST be
checked.

Remember that the microphone/camera can be hundreds of feet away
from the transmitter.

Use a digital spectrum analyzer and a wideband receiver with an analog
10.7/21.4mhz SDU on the IF, dispersions of 100/200/500khz).

RF Spectrum Analysis and monitoring should take place for at least
twelve
solid hours during a regular sweep (72 hours or more is preferred).

To prepare for IPM the spectrum should be evaluated/monitored for at
least four hours prior to the event.

Most non-gvt RF bugs will have a transmit frequency between 9khz
and 6ghz.

The Spectrum Analyzer inspection must cover at least 3khz to 40 ghz

VLF Detection-Audio .3 khz to 100 khz Video Cameras & Tape recorders
VLF Detection-RF 12 khz to 500 khz Video Cameras & Tape recorders
VLF Detection-Audio .3 khz to 150 khz Microphone/Ultrasonic
Chirping

Carrier Current Bugs 3 khz to 50 mhz 99% Voice

RF Bugs-HF 3 khz to 50 mhz 99% Voice
Space RF Bugs-VHF 30 mhz to 300 mhz 10% Video/80% Voice/10% Data
Space RF Bugs-UHF 300 mhz to 900 mhz 25% Video/60% Voice/15% Data

RF Bugs-Microwave1 900 mhz to 3.0 ghz 70% Video/20% Voice/10% Data
RF Bugs-Microwave2 3 ghz to 18.5 ghz 75% Video/15% Voice/10% Data
RF Bugs-Microwave3 18.5 ghz to 40.0 ghz 75% Video/ 5% Voice/20% Data

...and of Course Infrared! (Look for "IR Blooms")

700 - 1100nm Audio Transmitters/Lasers (CF between 880 and 950nm)
750 - 900nm Night Vision Illuminators
900 - 1710nm IR Video Illuminators

Note:
Most military/intelligence and governmental TSCM inspections look
for devices
between 3khz to 50mhz for Carrier Current, 20khz to 40ghz for
regular free
space RF radio devices, and directional microwave devices from
.5ghz to 120ghz.

John,
Sorry about the previous post about this subject,
I have never heard the AO-10 beacon that I can recall.
Pease see text beloe from
www.amsat.org
Good luck with hearing the beacon if it is indead turned on by a random
act :->

[IMAGE] AMSAT-OSCAR-10

[INLINE] Satellite Summary

Name: AMSAT-OSCAR-10 aka Phase-3B
Nasa Catalog Number: 14129
Launched: June 16, 1983
Orbit: Elliptical
Period: 11 Hours, 39 Minutes
Modes: B

Beacons:
* 145.810 MHz (General) (Unmodulated carrier)
* 145.987 MHz (Engineering) (Switched off)

Features:
* Molniya Orbit - Long Communications Time

Linear Transponders: Inverting (CW, SSB)
* Mode B Uplink: 435.030 - 435.180 MHz LSB
* Mode B Downlink: 145.825 - 145.975 MHz USB

[INLINE] Description

AMSAT-OSCAR-10 was launched in 1983. On December 1986 the main
computer failed. Thus, the ability to control the spacecraft was lost.
It is presently operational on mode B. However, due to the inability
to orient the satellite, the batteries are not always fully charged.
So operation is random as AO-10 goes in and out of the sunlight.
Communications are encouraged when the transponder is operational and,
of course, discouraged when the downlink frequency is FMing.

The following is an informative note from Peter, DB2OS:

The onboard computer of AMSAT-OSCAR-10 failed due to radiation damage of the memory chips. Since then we have had no more attitude control and due to seasonal changes of the alignment of the Sun in respect to the solar panels, there are times were no electrical power will be available and the spacecraft goes into hibernation until the sunangle is better again. The battery is indeed fully depleted and due to the harsh environment it may already have lost its capability to store electrical energy.

If the electrical power from the solar array is getting marginal, the transponders starts FMing, which means that your carrier is moving back and forth in frequency depending on the current transponder load. During those "undervoltage conditions," it sometimes happens that the onboard computer (IHU) starts to execute random code from the memory, which might turn transponders or beacons randomly on/off. The beacon may even sound like OSCAR-13, but that's mainly because the 400 Bit/s BPSK is done by hardware; indeed it contains no useful information. Under normal circumstances the transponder is on and the general beacon is transmitting only an unmodulated carrier.

Satellite operators frequently ask "what is the attitude of Oscar-10", or "can I have ALON/ALAT values for my computer program." Here's the analysis written by James Miller, G3RUH.

Really.....I've been wondering the same. Also havent heard anything from AO13 either. Are we outta business til Phase 3D???

Hope not.

Indeed, that is what was announced.

I am often very amazed when I read about the amateur radio project
aboard Mir...
Missing components, no manuals, wrong connector on cable, and now a
supply failure.
It sure doesn't look like a job well prepared (on earth).

Rob

I have to add to this that there was a radio power supply failer on Mir.
Another was installed but is only capable of running the old Icom and one
tnc. The digi voice module also has failed. All 4 fuses in the 2 connected
transcievers blew, only 2 spares are left to run the icom. this info
received from packet radio in the last week or so.

: ==

: Major "Real-World" Bugging Frequencies

: Common Wireless Bugs (Low Power - Well under 35-50 mw)

: 44.500 - 51.000 mhz "Baby/Room" monitors
: 72.100 - 75.400 mhz Hearing Assistance systems
: 54.000 - 150.000 mhz "Kit" Bugs
:
: 98.000 - 108.000 mhz Cheap out-of-band FM Bugs
: 112.000 - 142.000 mhz Cheap out-of-band FM Bugs
: 140.000 - 160.000 mhz Cheap out-of-band FM Bugs
:
: 60.000 - 320.000 mhz Low Cost kit bugs
: 398.000 - 406.000 mhz DECO Bugs (398.600/605, 399.450/455,
: 399.025/030, 406mhz)
: 25.000 - 450.000 mhz European/English Kit Bugs
:
: 150.000 - 216.000 mhz Typical VHF "Body Wire" & Pro-Grade Bugs
: 109.000 - 140.000 mhz Digital VHF Pro-Grade Bugs
: 138.000 - 174.000 mhz Typical "Spy Shop" & LE Cheap VHF Bugs
: (155-172 Popular)
: 140.000 - 150.000 mhz Popular Xandi Flea power kits (143/144mhz)
: 150.000 - 170.000 mhz Popular Japanese Flea power kits (under 5mw)
:
: 150.000 - 220.000 mhz Commercial Wireless Microphones
: 169.000 - 172.000 mhz 47 CFR 90.265 Authorization *** VERY Popular ***
: 174.000 - 216.000 mhz 47 CFR 2.106 (NG115) Authorization

: 395.000 - 410.000 mhz German UHF Wireless Microphones (PK Electronics)
: 219.000 - 530.000 mhz English UHF Wireless Microphones (300-500
: popular)
: 470.000 - 608.000 mhz Commercial Wireless Microphones
: 730.000 - 806.000 mhz Commercial Wireless Microphones
:
: 889.000 - 960.000 mhz Modified Cordless Phones (S/S & Hoppers)
:
: 380.000 - 480.000 mhz Video Bugs - US
: 890.000 - 960.000 mhz Video Bugs - US (902-928 Hot)
: 905.000 - 928.000 mhz Video/Audio Consumer Products (i.e.: Recoton)
:
: 1.700 - 1.930 ghz Video Bugs - US
: 2.400 - 2.500 ghz Video Bugs - US *** VERY Popular ***
: 5.725 - 5.850 ghz Video Bugs - US *** VERY Popular ***
:
: 1.100 - 1.400 ghz PAL Video Bugs *Very Hot in
: England/France/etc*
: 2.400 - 2.500 ghz PAL Video Bugs *Very Hot in
: England/France/etc*
: 3.500 - 4.500 ghz PAL Video Bugs *Very Hot in
: England/France/etc*

: 430 - 550 mhz Popular French Video/Audio Bugging System
: 950 - 2500 mhz Popular French Video/Audio Bugging System
: 700 - 900 mhz Popular Italian Audio Bugging System

: "Tactical" Bugs

: 225 - 400 mhz "Throw away" bugs (10uw-300mw Beer can bugs)
: 290 - 330 mhz Micro-powered Bugs (5uw-10mw Cigarette Butt Bugs)
:
: 30 - 500 mhz Tactical Repeaters (75mw-300mw)
: 285 - 400 mhz Tactical Repeaters (50mw-10watts)
: 100 - 152 mhz VHF Tactical Repeaters (300mw-25watts)
: 135 - 174 mhz VHF Tactical Repeaters (300mw-25watts)

: VLF and Carrier Current Type Bugs

: 9khz - 490 khz Carrier Current 47 CFR 15.219 Auth (250 microvolts)
: 490khz - 1.705 mhz Lossy Cable 47 CFR 15.221 Auth (1000 microvolts)
: 450khz - 30.00 mhz PLA Systems 47 CFR 15.207 Auth (30 mv@ft/30ft)

: 3 - 200 khz 300 mw High Grade Pro Bugs (over 500$ each)
: 100 - 200 khz 50-100 mw Older Bugs
: 120 - 200 khz 30-50 mw Pre 1990 intercoms
: 200 - 300 khz 30-50 mw Post 1990 intercoms
: 300 - 400 khz 250-400 mw TELCO Line transmitters (355khz popular)

: 300hz - 30 khz Cable TV Carrier - Hardwired microphones
: 30khz -300 khz Cable TV Carrier - Coaxial Bugs

: 100 - 450 khz Threat Window #1 Most CC Bugs
: 3khz - 3 mhz Threat Window #2 Expensive "Pro-Grade" Bugs
: 5khz - 32 mhz Threat Window #3 Popular WJ Carrier Current Rcvr
: 3khz - 50 mhz Threat Window #4 Realistic Threat Window for Telephone Wire
: 15mhz - 70 mhz Threat Window #5 Audio/Video "Micro-Wire" RF circuits
:
: WECO Bugs "boosted/ultrasonic audio" found on Power/CATV/Telco lines
:
: 64kbps to 1.5mbps Digital Bugs T-Carrier-Lo (T-1 and Below)
: 1.5mbps to 50mbps Digital Bugs T-Carrier-Hi (T-1 and above)
: 2.048mbps Digital Bugs Definity Circuit Pack Bug
: 32mbps Digital Bugs TMS Channel/Backplane bridge
: Designed to transmit on CC or Microwave ISM Spread Spectrum (2.4-6.0ghz)

: VLF Devices

: 25khz - 90khz Tape Recorder Bias Osc-Low End (35-45khz Common)
: 80khz - 145khz Tape Recorder Bias Osc-Mid Range (88.2, 96, 100khz Common)
: 100khz - 325khz Tape Recorder Bias Osc-Pro Grade (100, 150, 300khz Common)
: 40khz - 50khz Tape Recorder DAT/Hi8 (44.1/48khz Common)
:
: 8khz - 35khz Recorder Audio Servo Noise (10-20khz Common)

: 7khz - 35khz Video Camera VLF Detectable emmisions
: 15.750 mhz Common NTSC Video Camera
: 15.734 mhz CCD/PCB Video Camera (very easy to detect)
: 15.625 mhz Common Video Camera

: Also, be aware of ultrasonic/audio emmisions from most VLF devices.
: (Utilize a EOD/Bomb Tech Stethoscope, and Ultrasonic Spectrum Analyser)

: Spread Spectrum/Hopping Bugging Frequencies

: Legit Industrial Equipment (very inexpensive)
: 902 mhz - 928 mhz ISM band A (Very Popular)
: 2400 mhz - 2484 mhz ISM band B (Very Popular)
: 5725 mhz - 5850 mhz ISM band C
: 10500 mhz - 10550 mhz ISM band D
: 24075 mhz - 24250 mhz ISM band E

: SS Amateur Radio Bands Often used for eavesdropping (very inexpensive)
: 50 mhz - 54 mhz 6.00m Amateur Radio Equipment (STA)
: 144 mhz - 148 mhz 2.00m Amateur Radio Equipment (STA)
: 222 mhz - 225 mhz 1.25m Amateur Radio Equipment (STA)
: 420 mhz - 450 mhz 70cm Amateur Radio Equipment (47 USC 97.305)
: 902 mhz - 928 mhz 33cm Amateur Radio Equipment (47 USC 97.305)
: 1240 mhz - 1300 mhz 23cm Amateur Radio Equipment (47 USC 97.305)
: 2300 mhz - 2450 mhz 13cm Amateur Radio Equipment (47 USC 97.305)
: 3300 mhz - 3500 mhz 9cm Amateur Radio Equipment (47 USC 97.305)
: 5650 mhz - 5925 mhz 5cm Amateur Radio Equipment (47 USC 97.305)

: SS Amateur Radio Bands Occasionally used for eavesdropping
: 10.00 ghz - 10.50 ghz 3.0cm Amateur Radio Equipment (47 USC 97.305)
: 24.00 ghz - 24.25 ghz 1.2cm Amateur Radio Equipment (47 USC 97.305)

: 47.00 ghz - 47.20 ghz 6.0mm Amateur Radio Equipment (47 USC 97.305)

: SS Amateur Radio Bands Rarely used for eavesdropping (very expensive)
: 75.50 ghz - 81.00 ghz 4.0mm Amateur Radio Equipment (47 USC 97.305)
: 119.98 ghz - 120.02 ghz 2.5mm Amateur Radio Equipment (47 USC 97.305)
: 142.00 ghz - 149.00 ghz 2.0mm Amateur Radio Equipment (47 USC 97.305)
: 241.00 ghz - 250.00 ghz 1.0mm Amateur Radio Equipment (47 USC 97.305)
: 300.00 ghz - Light (3 Thz) Amateur Radio Equipment (47 USC 97.305)

: Note: Most commmon spread spectrum/hopping bugging equipment will
: hop at speeds
: between 100 and 50,000 hops per second. Equipment is readily
: available that
: hops even faster (100,000 to 300,000 hops per second). Dwell times
: can be as small as 1us (one widely used military system uses a dwell
: time of 3-5us)

: Outband Equipment
: ANY Television broadcast or Cable TV frequency
: ANY FM radio broadcast frequency
: ANY Paging or Beeper frequency
: ANY Cellular Telephone frequency

: 820 mhz - 960 mhz Modified (902-928) Cordless Telephones
: Modified Amateur Radio Equipment (can be on ANY frequency)

: Keep in mind that wideband (non-ISM) Spread Spectrum/Hopping Bugs
: are very
: difficult to detect(even if you are within a few feet). Watch for carrier
: feed-through, and "Noise Floor Humps".

: All Spread Spectrum devices are detectable

: Once Spread Spectrum/Hopping Bugs have been located (on the RF
: spectrum) all
: that can be done is to locate the sourse of the emission... it is
: virtually
: impossible to demodulate a SS signal unless you have access to the key.

: Also, a 500mw ISM device can easily have an effective range of over
: 20 miles.

: Look for spectral anomalies (humps) on the Spectrum Analyzer, and
: back up
: with a Compressive receiver.

: Commonly Used Law Enforcement Bugging Frequencies

: 37.000 - 952 mhz FCC Surveillance Blanket Authorization

: 47 CFR 90.19 "Physical surveillance, stakeouts, raids..."
: Straight AM/FM, FM-Subcarrier, SSB, Spread Spectrum, and Hoppers.
: If encrypted, it usually uses in-band voice inversion or DES.
: (Normally well under 2 watts... most under 35-150mw)

: 148 - 174 mhz
: 135 - 250 mhz Out-band Wireless Microphone
: 174 - 216 mhz In-band Wireless Microphone
: 350 - 440 mhz Common Video Freqs
: 380 - 930 mhz Wide Band Hoppers
: 806 - 824 mhz
: 851 - 869 mhz
: 905 - 930 mhz Popular Audio/Video Band

: 1.4 - 1.5 ghz Common Video Freqs
: 1.7 - 1.9 ghz Common Video Freqs (1.710 - 1.755 REAL Popular at
: 1/10 watt)
: 2.4 - 2.5 ghz Common Video Freqs (2.400 - 2.450 REAL Popular)
: 5.7 - 5.9 ghz Common Video Freqs (5.725 - 5.850 REAL Popular)
: 8.5 - 10.8 ghz Common Video Freqs

: 173.075 - LOJACK Auto tracking system beacon (200ms burst every second)

: Police Speed Enforcement Radar
: 10.450 - 10.600 ghz X-Band
: 11.488 - 11.628 ghz RD Detector
: 22.976 - 23.256 ghz RD Detector-2nd Harmonic
: 24.050 - 24.250 ghz X-Band
: 33.400 - 36.000 ghz Ka-Band
: 700nm - 1100nm Laser Threat
:

: Electronic Article Suveillance/Anti-Shoplifting Systems
: 8.10mhz - 9.30mhz Checkpoint (Hi-Q Tags) 8.2mhz Common
: 57.75khz - 58.75khz Sensormatic (Magnetic) Books, CDs, and Tapes
: 915mhz and 1830mhz Knogo (Microwave Resonant) Adhesive Labels

: 25 - 50 mhz "Bumper Beepers" (38 - 47 mhz very popular)
: 135 - 170 mhz "Bumper Beepers" (150-170 mhz very popular)
: 450 - 512 mhz "Bumper Beepers"
: 903 - 904 mhz "Bumper Beepers"
: 904 - 912 mhz "Bumper Beepers"
: 918 - 926 mhz "Bumper Beepers"
: 926 - 927 mhz "Bumper Beepers"

: WARNING:
: The area between 900 mhz and 6 ghz is EXTREMELY DANGEROUS as
: the eavesdropping equipment in that range is inexpensive, low power,
: and highly directional.

: Additionally, most TSCM people will not check frequencies above
: 1.0/1.5 ghz or
: 3 ghz (because the equipment is too expensive for them to buy).

: I have seen surveillance video tapes of TSCM inspections where the video
: cameras (Watec), microphones (Sony), and microwave RF transmitters (AID -
: 2.4ghz) were never detected by the inspectors (using 1ghz AVCOM Spectrum
: Analyzers).

: Surveillance Satellite (TK-Keyhole) Frequencies
: Note: Mostly Wideband Spread Spectrum/LPI channels

: 420mhz - 450mhz
: 1.2ghz - 1.4ghz
: 1.7ghz - 1.9ghz (1.76-1.84 real active)
: 1.9ghz - 2.2ghz (2.115 real active)
: 4.9ghz - 5.0ghz
: 7.5ghz - 8.3ghz
: 10.6ghz - 12.6ghz (11.7-12.2 active)
: 23.6ghz - 24.0ghz
: 25.5ghz - 25.7ghz
: 22.8ghz - 33.5ghz
: 42.5ghz - 47.0ghz
: 50.3ghz - 52.4ghz
: 78.0ghz - 85.5ghz
: 86.3ghz - 98.3ghz (86-92 real active)

: Commonly Used by Federal Agencies for Bugs, Wireless Microphones,
: and Body Wires (also 138-220 mhz, and 399-420 mhz, under 25-50 mw).

: 56/75/100hz - Narrowband (Bias Osc./Video Cameras/SIGINT)
: 30/150/200hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
: 250/300 hz - Narrowband (Bias Osc./Video Cameras/SIGINT)

: 300/250 hz - Narrowband OOK/FSK/Data, etc...
: 300/250 hz - Narrowband OOK/FSK/Data, etc...

: Subcarrier Detection:

: 10 - 500 khz - Most Commonly Used Subcarriers
: 30 - 150 khz - Typical Broadcast FM Subcarrier (FMSubC)
: 19/27/38 khz - Typical Stereo Broadcast FM Subcarrier (FMSubC)
: 67 khz - Typical Musicast/Musak Broadcast FM Subcarrier (FMSubC)

: 2 - 10 mhz - Audio Subcarriers often used with Video (4.2-8 mhz
: common)

: 5khz - 950khz - Realistic Subcarrier Threat (Audio)
: 1mhz - 15 mhz - Realistic Subcarrier Threat (Video)

: Summary (this will catch 99.99% of all Non-Intell/Diplomatic RF bugs)

: All TSCM Inspections should include the following frequencies:
: (Expect to see less than 10-35 mw maximum at the TX antenna)
: (Do not expect the signal to be present for more than 20uS-100uS)

: To find RF transmitters a search grid of 15 foot by 15 foot (or
: less) should be used.

: Also, all phone rooms, riser closets, demarcs, boots, etc. MUST be
: checked.

: Remember that the microphone/camera can be hundreds of feet away
: from the transmitter.

: Use a digital spectrum analyzer and a wideband receiver with an analog
: 10.7/21.4mhz SDU on the IF, dispersions of 100/200/500khz).

: RF Spectrum Analysis and monitoring should take place for at least
: twelve
: solid hours during a regular sweep (72 hours or more is preferred).

: To prepare for IPM the spectrum should be evaluated/monitored for at
: least four hours prior to the event.

: Most non-gvt RF bugs will have a transmit frequency between 9khz
: and 6ghz.

: The Spectrum Analyzer inspection must cover at least 3khz to 40 ghz

: VLF Detection-Audio .3 khz to 100 khz Video Cameras & Tape recorders
: VLF Detection-RF 12 khz to 500 khz Video Cameras & Tape recorders
: VLF Detection-Audio .3 khz to 150 khz Microphone/Ultrasonic
: Chirping

: Carrier Current Bugs 3 khz to 50 mhz 99% Voice
:
: RF Bugs-HF 3 khz to 50 mhz 99% Voice
: Space RF Bugs-VHF 30 mhz to 300 mhz 10% Video/80% Voice/10% Data
: Space RF Bugs-UHF 300 mhz to 900 mhz 25% Video/60% Voice/15% Data
:
: RF Bugs-Microwave1 900 mhz to 3.0 ghz 70% Video/20% Voice/10% Data
: RF Bugs-Microwave2 3 ghz to 18.5 ghz 75% Video/15% Voice/10% Data
: RF Bugs-Microwave3 18.5 ghz to 40.0 ghz 75% Video/ 5% Voice/20% Data
:
: ...and of Course Infrared! (Look for "IR Blooms")
:
: 700 - 1100nm Audio Transmitters/Lasers (CF between 880 and 950nm)
: 750 - 900nm Night Vision Illuminators
: 900 - 1710nm IR Video Illuminators

: Note:
: Most military/intelligence and governmental TSCM inspections look
: for devices
: between 3khz to 50mhz for Carrier Current, 20khz to 40ghz for
: regular free
: space RF radio devices, and directional microwave devices from
: .5ghz to 120ghz.

[enormous snip]

Then why did you feel it necessary to quote all of the previous post,
thus making us all pay to download it once again?

Please learn how to quote the minimum necessary in order to make your
point. This technique is described in numerous netiquette guides.

Regards, Mike.

We have translated the book: Tesla's Correspondence with Relatives in
ENGLESH. It contains more than 200 pages and we recommend that it gets
wide distribution in the scholastic community and elsewhere. It contains
a Preface by Dr. A.S. Marincic, Introduction by Dr. Nenad V. Mandich,
Tesla's relative and translated by Nicholas Kosanovich.

Not if you have the right kind of equipment to sniff around with. You can't get by with a scanner. Also note that there is a great deal of overlap in frequencies for different types of equipment.

Source record: 23120

Hello all, we would like to get one of the local schools into the SAREX program, and I would like to hear from other hams who have helped out in SAREX school contacts.

Also, I've been asked to speak to a group of high school kids about SAREX, and I would like to hear suggestions from sarex 'veterans' as to what I can focus on so kids who've seldom had any contact with amateur radio can become excited about ham radio, and particularly SAREX. This talk would be either at the end of this week or during the next one.

Thanks in advance!

Luis XE2MXU/N5UHB

154. Upcoming SAREX-and Mir-Docking Mission STS-76

Newsgroup: rec.radio.amateur.space
Date: 1996-01-21 00:00:00 UTC
From: Conrad.Weeseman@inter.NL.NET
Message-ID: <Pine.SUN.3.91.960121142606.6165L-100000@hatert.nijmegen.inter.nl.net>
Source record: 23121

SAREX TO FLY ON STS-76

The Shuttle Amateur Radio EXperiment, or SAREX will fly again on Shuttle Mission STS-76 set for launch March 21, 1996 at 0834 UTC (3:34 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for March 30, 1995 at 1707 UTC (12:07 AM EST) at the Kennedy Space Center, Florida. 9 day mission.

Among those in the crew who hold amateur licenses are, Astronaut Richard A. Searfoss KC5CKM who will serve as the Shuttle's Pilot, Mission Specialist Linda M. Godwin, N5RAX and Ronald M. Sega, KC5ETH, The remaining crew members include Commander Kevin P. Chilton, and Mission Specialists Shannon W. Lucid (who is expected to have his amateur license by that time) and Michael R. Clifford.

This will be Linda Godwin's third shuttle flight. She used ham radio aboard the shuttle Atlantis during STS-37 in April 1991, and from aboard Endeavour during STS-59 in April 1994.. Searfoss last operated SAREX from the Space Shuttle Columbia during mission STS-58 in October/November 1993. This will be his second Shuttle flight. Ronald Sega used SAREX from Discovery during the first joint US/Russian shuttle mission, STS-60, in February 1994.

During the mission, the shuttle will rendezvous and dock with the Russian Space Station Mir. Later, the shuttle will return to Earth, leaving Shannon Lucid with Mir for a 5 month stay aboard the Russian complex.

The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

During SAREX missions, the astronauts will typically make Amateur Radio scheduled contacts with schools, personal contacts with family members and random contacts with the Amateur Radio operators.

Additional STS-76 mission information can be obtained from NASA:
* NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 [VT-100, 8-N-1]
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
* NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

Sorry, the "military" specs relate primarly to the temperature range that the device is rated to perform over, nothing to do with radiation resistance.

In nearly all cases, the only difference between the commercial and military parts is the level of testing, with military parts actually tested for the specified parameters. Commercial grade parts come from the same assembly line, but are less expensive due to the limited testing they receive (basically functional testing at ambient temperature).

In a cost savings move, the government has gone away from requiring "military grade" in most (all?) applications, since they all perform the same anyway.

In trully critical applications; either certified parts are specified (tested fully against all parameters), or the sub-contractor will buy commercial grade parts and test the themselves for whatever parameters are critical for their application (temperature, pulse rise time, etc..

Yes, it would have been much easier to just have 1 line:

0-30 GHz: bugs

Try JVFAX 7.0 (or 7.1 not much difference, but I think the docs woth 7.0 are better). With a simple uA741 circuit, you can receive hf fax on SW. I am unfamiliar wiht what fax stations you have "down under".
I routinly receive NAM 8080 on a real bad antenna. You will also need a fairly stable radio. I have a Kenwood R2000 that works great. I have an older Panasonic RF2200 that is totally unsuited to any data reception.
You can "grab" JVFAX at the AMSAT web site.
If you are wanting to get wx sat photos JVFAX will also work for that.
I would recomend that you get Dr. Ralph Tagerts Latest WX sat handbook.
I do not know how things work in Australia, but assume that if it came to the worst case, you could order it from the ARRL. JVFAX supports a real simple voc that goes between you VHF receiver and the uA741 hf fax demod. This is a cheap, fun way to get into wx sat fax. A "real" wx demodulator will work circles around this cheap methode.
Good luck and happy faxing.

161. Mir Frequencies

Newsgroup: rec.radio.amateur.space
Date: 1996-01-22 00:00:00 UTC
From: Francisco Costa <fcosta@mail.telepac.pt>
Message-ID: <4duke0$7b9@vivaldi.telepac.pt>
Source record: 23128

Hi, Geert
If you're looking for amateur frequencies, the most used is 145.550MHz.
This freq. is also used for packet-radio up and downlink.
But the crew is often heard on other frequencies (145.800, 145.850) and
in ocasions (like EUROMIR) using duplex. UHF (voice and 9600 pk) activity
is expected also.

If you look for non-amateur frequencies, the most used is 143.620.
But there are reports of MIR activity between 165.870 and 166.155
(165.870, 166.122, 166.130 and 166.140 are popular).
If you can, check also the 900MHz band (between 922-926) Try 922.755MHz

A very reliable source is Chris van den Berg reports. I don't know if
they are avaliable via Internet, but you can read them on OSCAR NEWS,
AMSAT-UK journal.

To all radio amateurs

SB SPACE ARL ARLS001
ARLS001 Ham radio power supply aboard Mir fails

German cosmonaut Thomas Reiter, DF4TR/DP0MIR, aboard the Mir orbital
complex, reports that a power supply used for some of the
spacecraft's ham radio equipment failed on New Year's Eve. The
remaining, older power supply is only capable of powering the old
Icom 2-meter transceiver and one 1200-baud TNC. The digital voice
module also has failed, so there will be no more automatic voice
recordings in the near future.

Reiter reports all four fuses in the two connected transceivers have
blown and only two spare fuses remain. Last month, Reiter used the
digital voice recorder, built by Thomas Kieselbach, DL2MDE, to
broadcast holiday messages. The primary transmitting frequency is
145.800 MHz.

Recently, the cosmonauts on Mir unpacked new Amateur Radio equipment
delivered by rocket, including a 70-cm FM transceiver and 9600-baud
packet gear.

Reiter was philosophical. ''Well, at least we can be reached and
still can talk with the world,'' he said in a message to Dave Larsen,
N6JLH.

Well, the other difference is the packaging: the military parts use expensive hermetically-sealed ceramic packages, while the commercial parts use plastic packages, because of the different temperature ranges envisioned for their use. The plastic packages can't hold a hermetic seal if they are temperature-cycled too drastically.

The military actually has been known to use plastic packages in some situations. There was a Vietnam-era incident where proximity fuzes which had worked fine in Vietnam were showing a high failure rate in peacetime use afterwards. Turned out that the problem was plastic IC packages. They were fine when the fuzes went straight from the factory onto a plane for Vietnam, but less satisfactory when the fuzes sat in an unheated warehouse for a couple of years before use.

=========
SpaceNews
=========

MONDAY JANUARY 22, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* OSCAR-10 NEWS *
=================
AMSAT-OSCAR-10's orientation is such that its solar panels are not receiving
adequate illumination to maintain a charge on its storage batteries. As a
result, the downlink recently experienced frequency instability, and has now
gone silent. Users should refrain from using AO-10 until sun angles improve
to the point where its storage batteries can one again be charged.

* WEBERSAT-OSCAR-18 NEWS *
==========================
WEBERSAT (WO-18) is currently sending telemetry, photos, weekly whole
orbit data (WOD), and light spectra of the Sun or Earth on Mondays.

The satellite's digipeater is on and can be accessed on an uplink frequency
of 145.900 MHz. Using a terminal program connected to your TNC/PSK modem,
try connecting to yourself or calling CQ "VIA WEBER-1". Repeated packets
will appear on the downlink between telemetry and CCD image data
transmissions.

Photo 10/14 of Ethiopia is the current image. It has great contrast with
very few clouds and land features clearly visible. Use WW1.3 to convert the
photo to a GIF image, then use your favorite graphics program to size it,
and adjust the contrast and brightness slightly.

The satellite continues to have a weak and relatively steady tone of about
1200 Hz in the downlink signal, which can cause reception problems with some

modems. If this problem occurs, a ground-based solution is to adjust the IF-shift of the receiver to suppress the carrier into the skirts of the IF filter. Night reception seems to be better than in the daytime.

WOD collection and broadcast will adhere to the following schedule:

13 January/Week4: Temperatures and impact detector, Ch# 14 2F 30 35 3B 40
20 January/Week1: Array currents, Ch# 26 27 28 29 2A 2B
27 January/Week2: User requested channels, Ch# ?? ?? ?? ?? ?? ??
3 February/Week3: BCR, 21 22 29 2F 33 36
10 February/Week4: Temperatures and impact detector, Ch# 14 2F 30 35 3B 40
17 February/Week1: Array currents, Ch# 26 27 28 29 2A 2B

Check your local BBS, an issue of SpaceNews, or AMSAT bulletin for the current status of your favorite satellite.

[Info via Tom, IK3WVJ]

* OSCAR-11 NEWS *
==========
The UoSAT-OSCAR-11 continues to function well. UO-11 may be copied transmitting AFSK data on a narrowband FM carrier frequency of 145.826 MHz. OSCAR-11 transmits binary and ASCII data at a rate of 1200 bits per second. Surplus Bell-202 modems can be used to demodulate OSCAR-11 data provided the demodulated data stream is inverted prior to its application to the computer's serial port.

The following computer status report was recently received from OSCAR-11 by IK3WVJ:

** UoSAT-OSCAR-11 OBC **

The only problem is, you really have to search your building every day to make
sure that no bugs are around. I would just leave the bugs in the building
and fill them with dis-information.

I know that AMSAT (the Radio Amateur Satellite Corporation) has a web page with the keplerian elements available. I don't have the URL handy right now. Try finding it on Yahoo, and if you can't find it, e-mail me back (hamdan@ix.netcom.com), and I'll get it for you. There is also a way to subscribe to a mailing list for the elements. If you want that, I can dig that up for you as well.

73's de Bernie, KF0QS. Denver, Colorado.

JONATHAN'S SPACE REPORT - LATEST ISSUE

Jonathan's Space Report
No 273 1996 Jan 20 Cambridge, MA

-

Shuttle

Shuttle mission STS-72 has been completed with two satellite retrievals and two spacewalks. Endeavour completed its rendezvous with the Space Flyer Unit satellite on Jan 13. The SFU successfully retracted its solar panels, but failed to latch them, so the decision was made to jettison them. The first panel was ejected at 0935 UTC and the second at 0947 UTC. At 1057 UTC the RMS 303 robot arm was used to grapple SFU, and it was berthed in Endeavour's payload bay at 1139 UTC. SFU carried science and technology experiments for Japan's National Space Development Agency.

Endeavour then lowered its orbit to 302 x 311 km x 28.5 deg. The OAST-Flyer (Spartan 206) satellite was released using the RMS arm at 1132 UTC on Jan 14. OAST-Flyer carries an experiment to measure contamination caused by spacecraft outgassing, and a test of a laser-fired explosive separation device to make sure the device doesn't go off accidentally in sunlight. It also carried an amateur radio experiment.

Astronauts Leroy Chiao and Daniel Barry carried out a spacewalk on Jan 15. The airlock was depressurized at 0525 UTC, and NASA declared the EVA in progress at 0535 UTC. The hatch was opened at 0540 UTC. Chiao and Barry tested out Space Station equipment including a portable work platform and a rigid umbilical truss for carrying electrical cables and fluid lines. The astronauts returned to the airlock at 1130 UTC and closed the hatch 3 minutes later, returning their suits to orbiter power and repressurizing the airlock at 1144 UTC. NASA's official time for the walk was 6h 9m 19s, while I would give it an extra ten minutes (counting from depressurization rather than battery power).

On Jan 15-16 the Shuttle carried out a series of rendezvous burns to approach the OAST-Flyer Spartan, and on Jan 16 at 0947 UTC Wakata grappled the satellite with the RMS arm.

The second spacewalk to test out Space Station tools and equipment was performed by Chiao and Winston Scott. It started a little behind schedule, with depressurization at 0534 UTC on Jan 17, and hatch opening

at 0554. The spacewalk ended at 1234 UTC, for a duration of 7 hours 0 min (depress to repress) or 6h 53m 41s (on-battery-power to repress, the official NASA number). Scott tested out the thermal modifications to the spacesuit by standing in shadow on the Spartan Flight Support Structure while the Orbiter was turned to make the payload bay as cold as possible.

Endeavour closed its payload bay doors early on Jan 20, firing its braking rockets at 0641 UTC and reentered to a nighttime landing on runway 15 at Kennedy Space Center at 0742 UTC on Jan 20.
The next Shuttle mission is STS-75, with orbiter Columbia and the reflight of the 20 km long tethered satellite, which failed on its first flight in 1992.

Errata

I was wrong! Fred Cerkan informs me that STS-72 was not the first flight with no TAL requirement - STS-1, the very first mission, had no TAL requirement or TAL capability.

IRS-1C's panchromatic camera has a resolution of under 6 m, not 10m as I said earlier. Thanks to several readers for the correction.

Request for Info

Know anyone who worked for ABL in the 1960s? I'm trying to find information on the MG-18 rocket, a version of the X-258 Altair II used as an upper stage on Scout and Thor. Any info welcome.

Recent Launches

Ariane V82 was launched on Jan 12 from Kourou. It was an Ariane 44L model with the H-10-III upper stage. V82 carried two communications satellites, PAS 3R and Measat 1. PAS 3R is a Hughes HS-601 comsat with a launch mass of 2918 kg, to provide C and Ku band communications and television broadcasting services for the Atlantic Ocean region. It is due to be stationed at 43 deg W, and carries 16 C-band and 16 Ku-band transponders. PAS 3R replaces PAS 3, lost in a launch accident in 1994. MEASAT 1 (Malaysia/East Asia Satellite) is another Hughes satellite, this time the older HS-376 spin-stabilized model. Measat 1 is owned by Binariang Sdn. Bhd., the Malaysian telecommunications agency, and will provide C and Ku-band telecommunications services over Malaysia and the rest of SE Asia.

Delta 231 was launched on Jan 14 from Cape Canaveral Air Station and successfully rocketed to geostationary transfer orbit of 1357 x 35418 km x 21.0 deg. Payload of Delta 231 was Koreasat 2, a Lockheed Martin Astro Space AS3000 class comsat. Koreasat 1, launched last year, used up half its stationkeeping fuel reaching geostationary orbit after a launch malfunction left it in a lower than normal transfer orbit. The Koreasat

(Mugunghwa) satellites are owned by Korea Telecom. The McDonnell Douglas launch vehicle was a 7925 model.

Kosmos-2327 was launched on Jan 16 from Plesetsk into a 947 x 1020 km x 83.0 deg orbit, characteristic of a navigation satellite in the Parus series. It is in the same plane as the Parus satellite launched in Nov 1993 and named Kosmos-2266. The ground track is consistent with an ontime launch at 1534 UTC. Launch vehicle was a Kosmos-3M from the Polyot organization.

It has now been confirmed that the capsule found in Ghana last year is the reentry vehicle from the German Express microgravity satellite which failed to reach its planned orbit in Jan 1995. Negotiations are underway for its return to Germany.

There was a big recruiting drive by US State Department Security about
that time. They were looking for both counterbugging and computer
security people. Not only did they have nationwide magazine ads
(Electronics Mag.), they also had a road show that had inteviews set up
all over the country. (I kind of regret not interviewing for the job,
just for the entertainment value of it).

Looks like they used it as an opportunity to expand.

Would be useful if you knew precisely where in the building the little suckers are located. Unless you are working in Congress, most federal agencies, or the White House (first, and, in particular, the *second* floor), it's hard to fill the day with useless and distorted bullshit and keep your business afloat.

The only case that I know of where an entire building was bugged, was the US Embassy in Moscow, dutifully constructed by Soviet "craftsmen." No doubt all our CI guys got the normal promotions for their diligence.

I suppose there are monitoring devices and ways to install tamper-indicating seals and so on to determine the reintroduction of common listening devices once the place has been "swept."

Hi Chuck,

I got the kit and haven't built it yet.

It looks well made. I'd go for the newer version -138 vs -137 or something
that allows diode switching the crystals and has a more stable double sided
PC board.

From what I have read, you really need a 40 kHz bandpass or so to get a
good clean signal without distortion.

The directions are good and there is tune up info. Generally uses a
10.7 and 137 MHz generator to set the IF cans and crystal trimmer caps.

73,
Steve, N4DG

Subject: African Stations via RS-12/13, etc.

Hi,

I am looking for African Stations who like to have a sked with me
via the satellite RS-12/13 (maybe RS-10/11 and/or RS-15 if you like?).

If you don't have any experience with RS-12/13 then I would be happy
to give you all instructions you need. All what you need to work via
the satellite RS-12/13 is your normal HF equipment. No special radio
or antennas or training necessary!

BTW: If you are not from Africa and would like to have a sked with me,
don't worry and feel free to drop me an e-mail!

SB SPACE ARL ARLS001
ARLS001 Ham radio power supply aboard Mir fails

German cosmonaut Thomas Reiter, DF4TR/DP0MIR, aboard the Mir orbital complex, reports that a power supply used for some of the spacecraft's ham radio equipment failed on New Year's Eve. The remaining, older power supply is only capable of powering the old Icom 2-meter transceiver and one 1200-baud TNC. The digital voice module also has failed, so there will be no more automatic voice recordings in the near future.

Reiter reports all four fuses in the two connected transceivers have blown and only two spare fuses remain. Last month, Reiter used the digital voice recorder, built by Thomas Kieselbach, DL2MDE, to broadcast holiday messages. The primary transmitting frequency is 145.800 MHz.

Recently, the cosmonauts on Mir unpacked new Amateur Radio equipment delivered by rocket, including a 70-cm FM transceiver and 9600-baud packet gear.

Reiter was philosophical. ''Well, at least we can be reached and still can talk with the world,'' he said in a message to Dave Larsen, N6JLH.

From: XE2MXU/N5UHB <fjorozco@academ07.mty.itesm.mx>
Subject: help with SAREX

Hello all, we would like to get one of the local schools into the SAREX program, and I would like to hear from other hams who have helped out in SAREX school contacts.

Also, I've been asked to speak to a group of high school kids about SAREX, and I would like to hear suggestions from sarex 'veterans' as to what I can focus on so kids who've seldom had any contact with amateur radio can become excited about ham radio, and particularly SAREX. This talk would be either at the end of this week or during the next one.

Thanks in advance!

Date: 9 Jan 1996 23:31:16 GMT
From: Jim Devenport <jdevenport@lanl.gov>
Subject: uplink and downlink freqs. for MIR

The MIR space station is much easier to contact via radio than ANY of the USA Shuttle missions but it isn't overly easy either. I don't even bother to use satellite tracking programs for MIR any more, I just put 145.55 simplex into my 2 meter mobile and remote base memories and add it to the scanning lists. Several times a day I'll hear the packet buzzing away and with simple packet equipment I've contacted the MIR system several times but rarely have gotten more than the successful connect or a busy (DM) signal from the MIR TNC. A "busy" signal is actually, to me, a successful 2-way packet contact especially if you compare it to the usual USA SAREX policy of hoping to someday see your callsign in a published "stations heard" list. If you get a busy signal from MIR (very likely) it proves MIR has successfully heard you and you have successfully heard MIR. Full callsign exchanges and all: a legit 2-way contact. But confirming it may be a problem. Voice operation seems to be getting rarer and rarer from MIR but the cosmonauts still pop up on voice unexpectedly from time to time. I have called them repeatedly with high and low power without success but there are at least several local stations in Northern New Mexico who have successfully QSO'ed with MIR using 10 watts or less into omnidirectional outside antennas.

Subject: WANTED address for ordering a TRAKBOX is a antenna tracking box.

Hello

can someone give me the address for to order an TRAKBOX ?

All information is welkom!

Addresses of USA or EUROPE are all welkom!

Thanks in advance.

Our guys secreted bugs in the embassy fiasco that ultimately had a 200 million dollar price tag? It must have been a great laugh to see the Soviet and American "construction workers" fighting over choice bug placement spots and exchanging pointers on the relative merits of different devices. I wonder who negotiated the frequency allocations--then again, Aldrich Ames may have been the "referee"

The reality is that we probably botched the job, and any explanation that our bugs were in the mix is just good ol' nickel and dime CYA politics by the PR folks.

```
SPARTAN PACKET RADIO EXPERIMENT (SPRE)
------------------------------------------------------------------------

SPRE Post Mission Report

By: Ken McCaughey (N3FZX)
File: postmis1.txt
Date: 22-Jan-96

The SPRE mission has been a success meeting all the mission objectives!

Mission Objectives
------------------

* Promote amateur radio and amateur satellite communications.
* Test GPS and packet radio based tracking system using a Low Earth
Orbit (LEO) satellite.
* Provide an educational tool to inspire elementary and high school
students to pursue science and engineering.
* Provide a unique hands-on educational opportunity for college students.

Mission Statistics
------------------

At this time we are still receiving and processing SPRE and ARRtrak data.
We have been able to estimate the following statistics:

Number of amateur radio operators who where successful with APRtrak:
* approximately 100 in eight counties

Number of schools attempting to work SPRE:
* approximately 20, two were also on our control network

First station to receive SPRE telemetry:
* NH6TK at Pearl City High School, Hawaii,
(this station barely beat our control network :)

First station to digi through SPRE:
* BV1AF in Taiwan

Lowest powered station used to make a contact:
* 5 Watts by XE1KK in Mexico

Amateur radio operators in the following countries attempted to
participate with SPRE:
* Argentina
Australia
Columbia
```

Greece
France
Honduras
Hong Kong
Hungry
Japan
Peru
Portugal
South Africa
Spain
Taiwan
United States

Time from concept to flight:
* two years!

APRtrak

APRtrak was very successful even though opportunities were cut short. There were very few callsign duplications. There has been an overwhelming positive response from the amateur radio community. Everyone enjoyed being able to see the locations of the stations they where hearing. The turn out was pretty good considering the passes over the US were around 3am. The international turn out was very good as well.

A composite of the data collected by ground stations is being put together. When this is available, the data will be able to be replayed using APRtrak.

SPRE Ground Control Network

In addition to the main objectives, the control network was also a significant success story. There were nine control stations linked real-time via the Internet. This showed that the Internet could be used to support real-time amateur radio operations beyond wormholes and mail.

A big thanks goes out to all of the control stations that supported SPRE. They were a very capable, patient, and skilled group of HAMs. They made SPRE a joy to fly.

SPRE Loss of Signal

SPRE operated for 17 hours and 21 minutes before it suddenly stopped sending data. Right up to this event SPRE was performing as expected with no signs of any problems. Contrary to any rumors, SPRE was not purposely or inadvertently turned off by a control station contact. The exact cause of the problem is undetermined based on telemetry. In a few weeks the SPRE Team will have the hardware back and we will find out what happened.

SPRE Future

Many people have asked when SPRE is going to fly again. Right now it is
too early to say what is in store for the future of SPRE. A second flight
is not out of the question.

The End...

189. TCP/IP over Mobile SatPhone ?

Newsgroup: rec.radio.amateur.space
Date: 1996-01-25 00:00:00 UTC
From: jordan@tesla.iar.nrc.ca
Message-ID: <4e88ib$scm@nrcnet0.nrc.ca>
Source record: 23156
Cross-posted to: comp.dcom.telecom.tech,comp.protocols.tcp-ip,comp.protocols.ppp,sci.space.tech,rec.radio.amateur.space

Greetings,

We are considering the purchase of an aeronautical mobile satellite
phone terminal for use with AMSC/MSAT. This terminal provides an RS-232C
data port operating at 4800 bps and the literature claims it can be used
with any data communications software.

What I need to know is if one can run TCP/IP using SLIP or PPP over
such a link without problems ? Note: the MSAT satellite is geostationary
and would present a 300 odd msec. propagation delay It is connected
to the terrestial phone system through a gateway.

If not, what other protocol could be used for Internet access and
ftp file transfers ?

Thanks for any information or experience reports,
Jim

When you get this baby up and runnng could you post your results to the
group. I am currently using(yes I know thi isnot the "right" way to do it)
a Pro2004 in the wideband mode. The BW is way to wide, but I get pretty
good pix. I have a crossed dipole up 40' wiht an older(ancient) Vangard
JFET preamp. I have been tinkering with a comercial Sienhieser wireless
microhone receiver. While it has a better noise floor and the proper bw
(about 38Kc with gentle skirt out another 5 or 6kc then real step), it
is prone to im(busness band and ham nbfm) and aircraft trafic down around
120MHz. I was forced to go back to the Pro2004. I have been thinking
about the Hmatronics receiver.
Has anyone compared the "performance" of a cross dipole/turnstill with
the "eggbeater"? Does the Eggbeater have a narrower bw? Narrowed bw
might help my "out of band" interferrence problems.
Good luck

191. Band width

Newsgroup: rec.radio.amateur.space

Source record: 23067

Ok,
I know all you brainiacs out there will laugh at this question,
but...What exactly is bandwidth? I read about it all the time in relation
to communications, but how does it affect the transmission of data?
I always hear, "Need more bandwidth!" Is this the equivalent of "Need
a bigger hammer!"? The more complicated the answer the better.

Thanks alot,
Jim

192. PC Track, Where?

Hi,

A couple of years ago I remember seeing a very friendly satellite tracking program for DOS called PC-Track. I know it has been distributed on CD-ROM in the past, but don't know which one.

Does anyone know if it is available on the net, and if so where? And if it's not available does anyone have any recomendations on what to use instead?

Its for tracking Mir, just in case you're interested.

Thanks for any help,

Paul

Message-ID: <4eadrn$ea@kwuz.nerc-keyworth.ac.uk>
Source record: 23069

Someone said that there was 9600 baud packet equipment operating on 70cms aboard
the Mir space station, they also said it was down at the mo, due to a failed power supply. Does anyone know when a new power supply will be sent up?

Also, do they give QSL cards out for Mir? If so, where do I send the card, and how many dollars is the going rate?

Thanks,

Paul

MARKET MANAGER - ANTENNA PRODUCTS

Larsen Electronics is an internationally recognized supplier of quality antenna products for two-way communications. We are seeking an experienced Market/Product Manager for Amateur and Commercial antennas.

Successful candidates will have in-depth experience in radio related products up to 800 MHz. Direct experience with LMR and Amateur markets is preferred. Bachelor92s degree in Business or Marketing, or extensive related business experience required. Position responsibilities include: Product line management, pricing, sales programs, new products, training, and technical support. This position will also include a competitive compensation, incentive, and benefits plan.

Interested candidates may respond by forwarding a resume92 including income history to:

Larsen Electronics, Inc.
ATT: Human Resources Manager
P.O. Box 1799
Vancouver, WA. 98668-1799
FAX: 1-360-944-7556

Pre-employment drug screen required. Larsen Electronics is an Equal Opportunity Employer.

JONATHAN'S SPACE REPORT - LATEST ISSUE

Jonathan's Space Report
No 273 1996 Jan 20 Cambridge, MA

-

Shuttle

Shuttle mission STS-72 has been completed with two satellite retrievals and two spacewalks. Endeavour completed its rendezvous with the Space Flyer Unit satellite on Jan 13. The SFU successfully retracted its solar panels, but failed to latch them, so the decision was made to jettison them. The first panel was ejected at 0935 UTC and the second at 0947 UTC. At 1057 UTC the RMS 303 robot arm was used to grapple SFU, and it was berthed in Endeavour's payload bay at 1139 UTC. SFU carried science and technology experiments for Japan's National Space Development Agency.

Endeavour then lowered its orbit to 302 x 311 km x 28.5 deg. The OAST-Flyer (Spartan 206) satellite was released using the RMS arm at 1132 UTC on Jan 14. OAST-Flyer carries an experiment to measure contamination caused by spacecraft outgassing, and a test of a laser-fired explosive separation device to make sure the device doesn't go off accidentally in sunlight. It also carried an amateur radio experiment.

Astronauts Leroy Chiao and Daniel Barry carried out a spacewalk on Jan 15. The airlock was depressurized at 0525 UTC, and NASA declared the EVA in progress at 0535 UTC. The hatch was opened at 0540 UTC. Chiao and Barry tested out Space Station equipment including a portable work platform and a rigid umbilical truss for carrying electrical cables and fluid lines. The astronauts returned to the airlock at 1130 UTC and closed the hatch 3 minutes later, returning their suits to orbiter power and repressurizing the airlock at 1144 UTC. NASA's official time for the walk was 6h 9m 19s, while I would give it an extra ten minutes (counting from depressurization rather than battery power).

On Jan 15-16 the Shuttle carried out a series of rendezvous burns to approach the OAST-Flyer Spartan, and on Jan 16 at 0947 UTC Wakata grappled the satellite with the RMS arm.

The second spacewalk to test out Space Station tools and equipment was performed by Chiao and Winston Scott. It started a little behind schedule, with depressurization at 0534 UTC on Jan 17, and hatch opening

at 0554. The spacewalk ended at 1234 UTC, for a duration of 7 hours 0 min (depress to repress) or 6h 53m 41s (on-battery-power to repress, the official NASA number). Scott tested out the thermal modifications to the spacesuit by standing in shadow on the Spartan Flight Support Structure while the Orbiter was turned to make the payload bay as cold as possible.

Endeavour closed its payload bay doors early on Jan 20, firing its braking rockets at 0641 UTC and reentered to a nighttime landing on runway 15 at Kennedy Space Center at 0742 UTC on Jan 20.
The next Shuttle mission is STS-75, with orbiter Columbia and the reflight of the 20 km long tethered satellite, which failed on its first flight in 1992.

Errata

I was wrong! Fred Cerkan informs me that STS-72 was not the first flight with no TAL requirement - STS-1, the very first mission, had no TAL requirement or TAL capability.

IRS-1C's panchromatic camera has a resolution of under 6 m, not 10m as I said earlier. Thanks to several readers for the correction.

Request for Info

Know anyone who worked for ABL in the 1960s? I'm trying to find information on the MG-18 rocket, a version of the X-258 Altair II used as an upper stage on Scout and Thor. Any info welcome.

Recent Launches

Ariane V82 was launched on Jan 12 from Kourou. It was an Ariane 44L model with the H-10-III upper stage. V82 carried two communications satellites, PAS 3R and Measat 1. PAS 3R is a Hughes HS-601 comsat with a launch mass of 2918 kg, to provide C and Ku band communications and television broadcasting services for the Atlantic Ocean region. It is due to be stationed at 43 deg W, and carries 16 C-band and 16 Ku-band transponders. PAS 3R replaces PAS 3, lost in a launch accident in 1994. MEASAT 1 (Malaysia/East Asia Satellite) is another Hughes satellite, this time the older HS-376 spin-stabilized model. Measat 1 is owned by Binariang Sdn. Bhd., the Malaysian telecommunications agency, and will provide C and Ku-band telecommunications services over Malaysia and the rest of SE Asia.

Delta 231 was launched on Jan 14 from Cape Canaveral Air Station and successfully rocketed to geostationary transfer orbit of 1357 x 35418 km x 21.0 deg. Payload of Delta 231 was Koreasat 2, a Lockheed Martin Astro Space AS3000 class comsat. Koreasat 1, launched last year, used up half its stationkeeping fuel reaching geostationary orbit after a launch malfunction left it in a lower than normal transfer orbit. The Koreasat

(Mugunghwa) satellites are owned by Korea Telecom. The McDonnell Douglas launch vehicle was a 7925 model.

Kosmos-2327 was launched on Jan 16 from Plesetsk into a 947 x 1020 km x 83.0 deg orbit, characteristic of a navigation satellite in the Parus series. It is in the same plane as the Parus satellite launched in Nov 1993 and named Kosmos-2266. The ground track is consistent with an ontime launch at 1534 UTC. Launch vehicle was a Kosmos-3M from the Polyot organization.

It has now been confirmed that the capsule found in Ghana last year is the reentry vehicle from the German Express microgravity satellite which failed to reach its planned orbit in Jan 1995. Negotiations are underway for its return to Germany.

Try JVFAX 7.0 (or 7.1 not much difference, but I think the docs woth 7.0
are better). With a simple uA741 circuit, you can receive hf fax on
SW. I am unfamiliar wiht what fax stations you have "down under".
I routinly receive NAM 8080 on a real bad antenna. You will also need
a fairly stable radio. I have a Kenwood R2000 that works great. I have
an older Panasonic RF2200 that is totally unsuited to any data reception.
You can "grab" JVFAX at the AMSAT web site.
If you are wanting to get wx sat photos JVFAX will also work for that.
I would recomend that you get Dr. Ralph Tagerts Latest WX sat handbook.
I do not know how things work in Australia, but assume that if it came
to the worst case, you could order it from the ARRL. JVFAX supports
a real simple voc that goes between you VHF receiver and the uA741 hf

fax demod. This is a cheap, fun way to get into wx sat fax. A "real"
wx demodulator will work circles around this cheap methode.
Good luck and happy faxing.

Subject: African Stations via RS-12/13, etc.

Hi,

I am looking for African Stations who like to have a sked with me
via the satellite RS-12/13 (maybe RS-10/11 and/or RS-15 if you like?).

If you don't have any experience with RS-12/13 then I would be happy
to give you all instructions you need. All what you need to work via
the satellite RS-12/13 is your normal HF equipment. No special radio
or antennas or training necessary!

BTW: If you are not from Africa and would like to have a sked with me,
don't worry and feel free to drop me an e-mail!

To all radio amateurs

SB SPACE ARL ARLS001
ARLS001 Ham radio power supply aboard Mir fails

German cosmonaut Thomas Reiter, DF4TR/DP0MIR, aboard the Mir orbital complex, reports that a power supply used for some of the spacecraft's ham radio equipment failed on New Year's Eve. The remaining, older power supply is only capable of powering the old Icom 2-meter transceiver and one 1200-baud TNC. The digital voice module also has failed, so there will be no more automatic voice recordings in the near future.

Reiter reports all four fuses in the two connected transceivers have blown and only two spare fuses remain. Last month, Reiter used the digital voice recorder, built by Thomas Kieselbach, DL2MDE, to broadcast holiday messages. The primary transmitting frequency is 145.800 MHz.

Recently, the cosmonauts on Mir unpacked new Amateur Radio equipment delivered by rocket, including a 70-cm FM transceiver and 9600-baud packet gear.

Reiter was philosophical. ''Well, at least we can be reached and still can talk with the world,'' he said in a message to Dave Larsen, N6JLH.

Subject: help with SAREX

Hello all, we would like to get one of the local schools into the SAREX program, and I would like to hear from other hams who have helped out in SAREX school contacts.

Also, I've been asked to speak to a group of high school kids about SAREX, and I would like to hear suggestions from sarex 'veterans' as to what I can focus on so kids who've seldom had any contact with amateur radio can become excited about ham radio, and particularly SAREX. This talk would be either at the end of this week or during the next one.

Thanks in advance!

From: Jim Devenport <jdevenport@lanl.gov>
Subject: uplink and downlink freqs. for MIR

The MIR space station is much easier to contact via radio than ANY of the USA Shuttle missions but it isn't overly easy either. I don't even bother to use satellite tracking programs for MIR any more, I just put 145.55 simplex into my 2 meter mobile and remote base memories and add it to the scanning lists. Several times a day I'll hear the packet buzzing away and with simple packet equipment I've contacted the MIR system several times but rarely have gotten more than the successful connect or a busy (DM) signal from the MIR TNC. A "busy" signal is actually, to me, a successful 2-way packet contact especially if you compare it to the usual USA SAREX policy of hoping to someday see your callsign in a published "stations heard" list. If you get a busy signal from MIR (very likely) it proves MIR has successfully heard you and you have successfully heard MIR. Full callsign exchanges and all: a legit 2-way contact. But confirming it may be a problem. Voice operation seems to be getting rarer and rarer from MIR but the cosmonauts still pop up on voice unexpectedly from time to time. I have called them repeatedly with high and low power without success but there are at least several local stations in Northern New Mexico who have successfully QSO'ed with MIR using 10 watts or less into omnidirectional outside antennas.

the person who wrote the receiving equipment for these transmisions was extreamely expensive was right. our local repeater broadcasts the shuttle link through a sat. link. you could use your scanner to copy this, however it is a secondary user of the frequency. maybe you have something like this in your area. contact your local ham radio club. hope this helped.

UCI PD freqs:

F-1 155.445 MHz
F-2 155.505 MHz

The UC system is suppossed to be switching over to 800 MHz trunked system
for each campus (which will include all radio users from the PD to
maintenance), but I'm not sure when. The UCI allocated freqs are:

866.4875; 866.9875; 867.4875; 867.9875; 867.9875; 868.4875.

Any other info you want, feel free to E-mail me.

I sent something very similar to the below to support@grove.net --
it should interest the readers on this group -- and they might be
able to help out as well.

It is a inquiry pursuing something someone whose email address is no
longer good who posted the below quote to the Rush Limbaugh FAQ
(see below).

Thanks! -- Roleigh Martin (rol@uhc.com)

P.S. Please also reply by email to. Also, does anyone know what is
the current email address for:
Kenneth Carlson <carlsenk@seq.oit.osshe.edu> -- this address is no
longer valid. Thanks again!

==========

To - support@grove.net

Dear Sirs:

For an writeup I'm doing on what to do if you are a diehard Rush
Limbaugh fan who lives in an area where there is no local AM radio
station who carries his show. I'm touching on Shortwave and
Satellite Alternatives. I am quoting from some email and usenet postings
pertain I believe to a product you sell that I want to ask you if so, and if
so, what all has to be ordered and at what cost. I'd like to give my readers
enough information to order a complete kit from you.

I reprint this part of the Internet Rush Limbaugh FAQ, per the written
permission of the FAQ posters:*

"Q7: What satellite channels carry Rush's Radio and TV shows?
A7: Kenneth Carlson <carlsenk@seq.oit.osshe.edu> writes:
Rush Limbaugh Radio Show on Satellite:

I have had a few inquires for satellite locations, since Waterfront
Communications has moved to different satellites. You of course, have
my permission to post. The United States Armed Forces Radio and
Television Service (AFRTS) broadcast live, the first hour of radio
show on Spacenet 2, Transponder 20, 7.40 MHz. On this feed will have
his national show and Armed Forces PSA's.

The Rush Limbaugh Radio Show is broadcasted to radio stations on
SatCom C5, Transponder 23. This feed is digital, thus needing special
equipment to pick it up, which cost thousands of dollars.

There is another radio show feed on Galaxy 4, transponder 3. This SCPC which requires a receiver for @$US500 dollars. On this feed you will get the national feed, PSA's and bogus commericals that Rush's Radio Show produced."

My question to you is this. Regarding his last paragraph, is he referring to something like what is shown on your web page: http://catmac.grove.net/CGI.SPG?L=F&P=RCV+27

SCPC-100 Satellite Audio Receiver
Receive Hundreds of SCPC Radio Channels on Your TVRO System!
RCV 27
Years ago most radio networks--ABC,
CBS, Mutual, NBC, NPR and others
distributed their programming by
telephone lines or microwave systems.
Single Channel Per Carrier (SCPC)
technology has allowed these networks
to use satellite transmissions to their
affiliates and users.

Now you can expand your home satellite system to receive all of these "hidden signals" and programs with the Universal SCPC-100 Satellite SCPC Audio Receiver.

The new SCPC-100 receiver is the first high quality unit that is affordable, rivaling many commercial SCPC receivers costing thousands of dollars. Features include:

Stable microprocessor--controlled tuning with two buttons. No knobs; frequency agile. 50-channel program memory with instant one-button recall;Non- volatile; holds memory when power is off. Receives entire 950-1450 MHz LNB frequency range from your satellite system. Easy-to-read 1/2" LED's; 4 digits, 7 segment numbers. Receives high quality music from hundreds of stations; Simple 3 minute hook-up; easy to use; no user fees or subscriptions required for reception. Receives all C- and Ku-band SCPC signals and programming.

Unit made and assembled in the U.S.A.
Manufacturer: Universal
Price: $399.95
Shipping Rates
US Rates: UPS 2nd: $5.50 Priority Mail: $7.50
Canadian Rates: Can App: $8.00 Can UPS: $9.00
For International Shipping Rates call or E-Mail: order@grove.net

Is the above capable of allowing U.S. citizens who are living in the USA in areas where they are not near an AM radio station that carries Rush Limbaugh, the Radio Show, to get Rush's Radio Show via the "feed on Galaxy 4, transponder 3. This SCPC which requires a receiver for @$US500 dollars. On this feed you will get the national feed, PSA's and bogus commericals that Rush's Radio Show produced." [By the way, what is a "PSA"--do you know?]

If your receiver is what is needed, what other things will people have to order: eg, perhaps antennas, masts, cables, directional-rotators (is that what it is called?), descramblers or decoders--what will they need to order? I'm interested in a fully spec'ed out items of things to buy but I do not want to recommend to the readers any frivolous, overkill items.

Last, do you know if the above satellite feed is capable of reaching all across America, including Alaska, Canada, and Hawaii?

Thank you for your attention. I will want to reprint your reply, so please make it specified in your reply that you are aware and okay such reprinting in a commercial book.

Thanks! -- Roleigh Martin, 5511 Malibu Drive, Edina MN 55436

==========

P.S. Regarding the "*" footnote, I got written permission to reprint the whole FAQ, which I'm including in the Appendix. I do focus on this paragraph too.

202. NORAD Two-Line Orbital Element Sets (TLE744)

Newsgroup: rec.radio.amateur.space
Date: 1996-01-26 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4ebmlu$m65@blackbird.afit.af.mil>
Source record: 23165

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

SB SPACE ARL ARLS002
ARLS002 STS-75 launch date

The next scheduled Space Shuttle mission is STS-75. Launch is
planned for February 22, 1996 at 2018 UTC.

The STS-75 Nominal Mission Orbit Profile and State Vectors have been
uploaded to the AMSAT FTP site:

ftp.amsat.org /amsat/keps/sts-75v.zip

This data is available for immediate download. The AMSAT WWW State
Vector Tutorial page will be updated soon to link this and thus make
it available for download via the World-Wide Web.

Thanks to Ken Ernandes, N2WWD, for providing this information.

Jim,

Nope is like you need a bigger PIPE
more bits to flow thru it in the same amount of given time
Geneerally the higher the transmission rate the more bandwidth /space/ the
signal will occupy
That is about as complicated as I can get :->
I'm sure other will do better

If the part is spec'ed only to LEO radiation levels and if there is an equivalent commercial from the same manufacturer then, yes, all parts are from the same production line. (While I worked at Intel "we" (the people I worked for) created a new part rating called Express, which happened to be parts that passed commercial screens, but failed the more extreme military screens. Because it was "better" than commercial, they could charge more. :-))

If the part is spec'ed for higher orbits and/or higher levels it's likely different from the ground up. You have to use a different process and different design rules. Fortunately (?), modern CMOS (submicron) processes have begun to see the same types of damage (though through different mechanisms) during manufacturing that total dose radiation causes, which indirectly is, in addition to geometry shrinks, driving processes to be harder.

Jeff (used to nuke parts)

Hi:

My name is Ruth and I am down here in Nashville from Ontario Canada. I am on a five month roller coaster tour of America, hoping to ride as many as I can! I would like to go to Six Flags over Georgia, as well as Paramount`s Carowinds in North Carolina and Ghost Town In The Sky in North Carolina. Can anyone help me by letting me know when they are open ie. February. Much appreciated!

P.S. If anyone is planning to go to Paramounts Wonderland in Maple, Ontario, Canada, The BAT is well worth the visit!!!

Please E-Mail me at Metcan@Nashville.Net

216. Special Events Station!!!

Newsgroup: rec.radio.amateur.space

Thank-you for reading this. My name is Michael Long (KB8WPE) and I am the Public Relations Manager for the Husky Amateur Radio Club (HARC) whose callsign is W8YY. The club is located on the Michigan Technological University campus.

Starting on February 1, 6am EST, and continuing on until February 3, 6am EST, W8YY will be running a Special Events station for Michigan Tech's Winter Carnival '96. The frequencies listed below are the most likely place we will be operating. For this Special Events station we have 8"x11" certificates that would look great on anyones' wall! All you have to do is contact us and then send a QSL with a self addressed stamped envelope to receive the certificate.

Here are the frequencies:

Band Frequency Mode Time
160m 1.90 MHz LSB 8pm-8am
75m 3.90 MHz LSB 10pm-8am
40m 7.25 MHz LSB 7pm-10pm
20m 14.250 MHz USB majority of the day (8am-7pm)
17m 18.150 MHz USB if open 8am-7pm
15m 21.350 MHz USB if open 8am-7pm
10m 28.40 MHz USB if open 8am-7pm
2m 144.2 MHz USB All the time
146.58 MHz FM All the time
70cm 432.100 MHz USB All the time

Again, thank-you for reading this message and all of us here hope to here from you during the Special Events station!

For any more info. email me at cmlong@mtu.edu or the Club President, Dave Gillahan, at dmgillah@mtu.edu

You can also check out our homepage at
http://techsrv1.tech.mtu.edu:8080/harc.html
Though it is just beginning it does have a little information on it.

Sincerely,
Mike Long -KB8WPE-

217. Question about frequencie from parabol to reciever. Ghz to ??? Mhz?

Newsgroup: rec.radio.amateur.space
Date: 1996-01-28 00:00:00 UTC
From: Geert.Pirens@ping.be
Message-ID: <4eh1v8$8u8@ping1.ping.be>
Source record: 23084

Hello,

I have a question to you all the expers!

I have a satellite reciever, and I wana now witch frequencie must I have in Ghz on my screen to recieve the frequencie 1258 Mhz.

I want to recieve ATV with my normal satellite reciever but on my screen I can only see the frequenties in Ghz, like this 10.662 Mhz.

I want to schut off the parabol antenna and connect an 23cm ATV antenna, but I want to recieve the frequentie 1.258 Mhz.

My satellite reciever can recieve between 950 - 1750 Mhz.
Normaly it must work!

Can anybody help me on this ?

ALL INFORMATION IS WELKOM.

* SAREX TO FLY ON STS-76 *
==========
The Shuttle Amateur Radio EXperiment, or SAREX will fly again on Shuttle Mission STS-76 set for launch March 21, 1996 at 0834 UTC (3:34 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for March 30, 1995 at 1707 UTC (12:07 AM EST) at the Kennedy Space Center, Florida. STS-76 will be a 9 day mission.

Among those in the crew who hold amateur licenses are, Astronaut Richard A. Searfoss, KC5CKM, who will serve as the Shuttle's Pilot, Mission Specialist Linda M. Godwin, N5RAX, and Ronald M. Sega, KC5ETH. The remaining crew members include Commander Kevin P. Chilton, and Mission Specialists Shannon W. Lucid (who is expected to have his amateur license by that time) and Michael R. Clifford.

STS-76 will be Linda Godwin's third shuttle flight. She used ham radio aboard the shuttle Atlantis during STS-37 in April 1991, and from aboard Endeavour during STS-59 in April 1994. Searfoss last operated SAREX from the Space Shuttle Columbia during mission STS-58 in October/November 1993. This will be his second Shuttle flight. Ronald Sega used SAREX from Discovery during the first joint US/Russian shuttle mission, STS-60, in February 1994.

During the mission, the shuttle will rendezvous and dock with the Russian Space Station Mir. Later, the shuttle will return to Earth, leaving Shannon Lucid on Mir for a 5 month stay aboard the Russian complex.

The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

During SAREX missions, the astronauts will typically make Amateur Radio scheduled contacts with schools, personal contacts with family members and random contacts with the Amateur Radio operators.

Additional STS-76 mission information can be obtained from NASA:
* NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 [VT-100, 8-N-1]
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
* NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

* MIR NEWS *
============
1996 will be a year filled with interesting activities on the Russian space station MIR. The crew currently on-board MIR (Main Expedition ME 20) will continue the Euromir-95 program and make a third space walk (EVA) on 08-Feb-96. This EVA, originally an EVA to be executed by Russians in the interest of ESA, will now be made in the framework of Euromir-95 and one of the 2 participants will be Thomas Reiter. This became possible due to the 44 day extension of the ME-20/Euromir-95 mission. During the EVA, the Cosmonauts will retrieve the ESEF (European Science Exposure Facility), which had been installed on the outer surface of the MIR-complex by Reiter and Avdeyev on 20-Oct-95. The crew of ME-20 will be relieved by the crew of ME-21, which will include Cosmonauts Onufriyenko and Usachov. They will start with the Soyuz-TM23 on 21-Feb-96 and link up with MIR on 23-Feb-96. The ME-20/Euromir-95 crew will return to Earth in the Soyuz-TM22 on 29-Feb-96.

Other events scheduled for MIR in 1996 will be three docking missions with Space Shuttle Atlantis. Docking will occur on STS missions:

STS-76 (23-Mar-96)
STS-79 (03-Aug-96)
STS-81 (05-Dec-96)

Soyuz-TM ships will bring relief crews to the MIR space station three times in 1996. Foreigners, including a French woman and German man will be involved in two of these missions. Soyuz-TM ships will return to Earth three times with relieved crews.

During 1996, four Progress-M supply ships will link up with MIR. The last big module, Priroda, will be launched to MIR in March 1996. This will be

the fifth and final module for the MIR orbital complex.

A few days after the docking of Priroda and its redocking from the axial to a radial port, the first Atlantis docking mission will begin. During this mission, Astronauts will make an EVA and work outside the huge complex. One of the American astronauts, Shannon Lucid, will be added to the MIR crew and return to Earth by Atlantis during the second docking mission in August.

The crew of MIR-ME-21 (launch 21-Feb-96) will perform five EVAs. The following crew (ME-22), scheduled for launch on 06-Jul-96, will make four EVAs. The most spectacular operation will be during the last Atlantis mission in 1996 (STS-86). In the period in which the Atlantis is docked to the MIR complex, the freighter Progress-M34 will undock and decay in the atmosphere. One day later, the Soyuz-TM 25 with a relief crew will dock to the complex. On the following day, Atlantis will undock and return to Earth.

>such a link without problems ? Note: the MSAT satellite is geostationary
>and would present a 300 odd msec. propagation delay...

TCP/IP via geostationary comsat has been done quite extensively in the
past, and if you dig a bit in the literature, you should find quite a
bit of detail.

If (rather dim) memory serves, it works tolerably well but you need some
careful attention to tuning parameters -- such a link is very different
from the links most straight-out-of-the-box TCPs are tuned for. There
are some limits on what can be done; the long round-trip time badly hurts
high-level protocols that run in stop-and-wait lockstep, and there are
rather a lot of those.

JVFAX and a simple 741 comperator style interface is a good way to get your feet wet. I have been playing with JVFAX V4.1 (which has Herc support), an IC725 for RX, connected to a low dipole, routinely picking up WX pics from AXM in Melbourne (good service :-)

You might be better off listening to AXI in Darwin or ZKLF Auckland as Melbourne may be inside the skip zone... Most these stations transmit on multiple frequencies, you pick the one that gives the best signals.

The advantage of the 741 interface is that, if you get bored with WX fax, you can try out HAMCOM V3.0 and tune in to amateur and commercial RTTY, SITOR/AMTOR etc.

Coming back to the WX fax, (S)VGA is recommended, due to better resolution over Herc MGA. as JVFAX does the signal processing in software, tuning is not critical, it will keep tracking the signal even when moving the signal inside the passband. JVFAX 7.1 comes with circuits for a better, ADC based AM/FM FAX decoder.

JONATHAN'S SPACE REPORT - LATEST ISSUE

Jonathan's Space Report
No 273 1996 Jan 20 Cambridge, MA

-

Shuttle

Shuttle mission STS-72 has been completed with two satellite retrievals and two spacewalks. Endeavour completed its rendezvous with the Space Flyer Unit satellite on Jan 13. The SFU successfully retracted its solar panels, but failed to latch them, so the decision was made to jettison them. The first panel was ejected at 0935 UTC and the second at 0947 UTC. At 1057 UTC the RMS 303 robot arm was used to grapple SFU, and it was berthed in Endeavour's payload bay at 1139 UTC. SFU carried science and technology experiments for Japan's National Space Development Agency.

Endeavour then lowered its orbit to 302 x 311 km x 28.5 deg. The OAST-Flyer (Spartan 206) satellite was released using the RMS arm at 1132 UTC on Jan 14. OAST-Flyer carries an experiment to measure contamination caused by spacecraft outgassing, and a test of a laser-fired explosive separation device to make sure the device doesn't go off accidentally in sunlight. It also carried an amateur radio experiment.

Astronauts Leroy Chiao and Daniel Barry carried out a spacewalk on Jan 15. The airlock was depressurized at 0525 UTC, and NASA declared the EVA in progress at 0535 UTC. The hatch was opened at 0540 UTC. Chiao and Barry tested out Space Station equipment including a portable work platform and a rigid umbilical truss for carrying electrical cables and fluid lines. The astronauts returned to the airlock at 1130 UTC and closed the hatch 3 minutes later, returning their suits to orbiter power and repressurizing the airlock at 1144 UTC. NASA's official time for the walk was 6h 9m 19s, while I would give it an extra ten minutes (counting from depressurization rather than battery power).

On Jan 15-16 the Shuttle carried out a series of rendezvous burns to approach the OAST-Flyer Spartan, and on Jan 16 at 0947 UTC Wakata grappled the satellite with the RMS arm.

The second spacewalk to test out Space Station tools and equipment was performed by Chiao and Winston Scott. It started a little behind schedule, with depressurization at 0534 UTC on Jan 17, and hatch opening

at 0554. The spacewalk ended at 1234 UTC, for a duration of 7 hours 0 min (depress to repress) or 6h 53m 41s (on-battery-power to repress, the official NASA number). Scott tested out the thermal modifications to the spacesuit by standing in shadow on the Spartan Flight Support Structure while the Orbiter was turned to make the payload bay as cold as possible.

Endeavour closed its payload bay doors early on Jan 20, firing its braking rockets at 0641 UTC and reentered to a nighttime landing on runway 15 at Kennedy Space Center at 0742 UTC on Jan 20.
The next Shuttle mission is STS-75, with orbiter Columbia and the reflight of the 20 km long tethered satellite, which failed on its first flight in 1992.

Errata

I was wrong! Fred Cerkan informs me that STS-72 was not the first flight with no TAL requirement - STS-1, the very first mission, had no TAL requirement or TAL capability.

IRS-1C's panchromatic camera has a resolution of under 6 m, not 10m as I said earlier. Thanks to several readers for the correction.

Request for Info

Know anyone who worked for ABL in the 1960s? I'm trying to find information on the MG-18 rocket, a version of the X-258 Altair II used as an upper stage on Scout and Thor. Any info welcome.

Recent Launches

Ariane V82 was launched on Jan 12 from Kourou. It was an Ariane 44L model with the H-10-III upper stage. V82 carried two communications satellites, PAS 3R and Measat 1. PAS 3R is a Hughes HS-601 comsat with a launch mass of 2918 kg, to provide C and Ku band communications and television broadcasting services for the Atlantic Ocean region. It is due to be stationed at 43 deg W, and carries 16 C-band and 16 Ku-band transponders. PAS 3R replaces PAS 3, lost in a launch accident in 1994. MEASAT 1 (Malaysia/East Asia Satellite) is another Hughes satellite, this time the older HS-376 spin-stabilized model. Measat 1 is owned by Binariang Sdn. Bhd., the Malaysian telecommunications agency, and will provide C and Ku-band telecommunications services over Malaysia and the rest of SE Asia.

Delta 231 was launched on Jan 14 from Cape Canaveral Air Station and successfully rocketed to geostationary transfer orbit of 1357 x 35418 km x 21.0 deg. Payload of Delta 231 was Koreasat 2, a Lockheed Martin Astro Space AS3000 class comsat. Koreasat 1, launched last year, used up half its stationkeeping fuel reaching geostationary orbit after a launch malfunction left it in a lower than normal transfer orbit. The Koreasat

(Mugunghwa) satellites are owned by Korea Telecom. The McDonnell Douglas launch vehicle was a 7925 model.

Kosmos-2327 was launched on Jan 16 from Plesetsk into a 947 x 1020 km x 83.0 deg orbit, characteristic of a navigation satellite in the Parus series. It is in the same plane as the Parus satellite launched in Nov 1993 and named Kosmos-2266. The ground track is consistent with an ontime launch at 1534 UTC. Launch vehicle was a Kosmos-3M from the Polyot organization.

It has now been confirmed that the capsule found in Ghana last year is the reentry vehicle from the German Express microgravity satellite which failed to reach its planned orbit in Jan 1995. Negotiations are underway for its return to Germany.

Try JVFAX 7.0 (or 7.1 not much difference, but I think the docs woth 7.0
are better). With a simple uA741 circuit, you can receive hf fax on
SW. I am unfamiliar wiht what fax stations you have "down under".
I routinly receive NAM 8080 on a real bad antenna. You will also need
a fairly stable radio. I have a Kenwood R2000 that works great. I have
an older Panasonic RF2200 that is totally unsuited to any data reception.
You can "grab" JVFAX at the AMSAT web site.
If you are wanting to get wx sat photos JVFAX will also work for that.
I would recomend that you get Dr. Ralph Tagerts Latest WX sat handbook.
I do not know how things work in Australia, but assume that if it came
to the worst case, you could order it from the ARRL. JVFAX supports
a real simple voc that goes between you VHF receiver and the uA741 hf

fax demod. This is a cheap, fun way to get into wx sat fax. A "real"
wx demodulator will work circles around this cheap methode.
Good luck and happy faxing.

Subject: African Stations via RS-12/13, etc.

Hi,

I am looking for African Stations who like to have a sked with me
via the satellite RS-12/13 (maybe RS-10/11 and/or RS-15 if you like?).

If you don't have any experience with RS-12/13 then I would be happy
to give you all instructions you need. All what you need to work via
the satellite RS-12/13 is your normal HF equipment. No special radio
or antennas or training necessary!

BTW: If you are not from Africa and would like to have a sked with me,
don't worry and feel free to drop me an e-mail!

To all radio amateurs

SB SPACE ARL ARLS001
ARLS001 Ham radio power supply aboard Mir fails

German cosmonaut Thomas Reiter, DF4TR/DP0MIR, aboard the Mir orbital complex, reports that a power supply used for some of the spacecraft's ham radio equipment failed on New Year's Eve. The remaining, older power supply is only capable of powering the old Icom 2-meter transceiver and one 1200-baud TNC. The digital voice module also has failed, so there will be no more automatic voice recordings in the near future.

Reiter reports all four fuses in the two connected transceivers have blown and only two spare fuses remain. Last month, Reiter used the digital voice recorder, built by Thomas Kieselbach, DL2MDE, to broadcast holiday messages. The primary transmitting frequency is 145.800 MHz.

Recently, the cosmonauts on Mir unpacked new Amateur Radio equipment delivered by rocket, including a 70-cm FM transceiver and 9600-baud packet gear.

Reiter was philosophical. ''Well, at least we can be reached and still can talk with the world,'' he said in a message to Dave Larsen, N6JLH.

Subject: help with SAREX

Hello all, we would like to get one of the local schools into the SAREX program, and I would like to hear from other hams who have helped out in SAREX school contacts.

Also, I've been asked to speak to a group of high school kids about SAREX, and I would like to hear suggestions from sarex 'veterans' as to what I can focus on so kids who've seldom had any contact with amateur radio can become excited about ham radio, and particularly SAREX. This talk would be either at the end of this week or during the next one.

Thanks in advance!

From: Jim Devenport <jdevenport@lanl.gov>
Subject: uplink and downlink freqs. for MIR

The MIR space station is much easier to contact via radio than ANY of the USA Shuttle missions but it isn't overly easy either. I don't even bother to use satellite tracking programs for MIR any more, I just put 145.55 simplex into my 2 meter mobile and remote base memories and add it to the scanning lists. Several times a day I'll hear the packet buzzing away and with simple packet equipment I've contacted the MIR system several times but rarely have gotten more than the successful connect or a busy (DM) signal from the MIR TNC. A "busy" signal is actually, to me, a successful 2-way packet contact especially if you compare it to the usual USA SAREX policy of hoping to someday see your callsign in a published "stations heard" list. If you get a busy signal from MIR (very likely) it proves MIR has successfully heard you and you have successfully heard MIR. Full callsign exchanges and all: a legit 2-way contact. But confirming it may be a problem. Voice operation seems to be getting rarer and rarer from MIR but the cosmonauts still pop up on voice unexpectedly from time to time. I have called them repeatedly with high and low power without success but there are at least several local stations in Northern New Mexico who have successfully QSO'ed with MIR using 10 watts or less into omnidirectional outside antennas.

>Ok,
> I know all you brainiacs out there will laugh at this question,
>but...What exactly is bandwidth? I read about it all the time in relation
>to communications, but how does it affect the transmission of data?
>I always hear, "Need more bandwidth!" Is this the equivalent of "Need
>a bigger hammer!"? The more complicated the answer the better.

Any modulated signal is a product of the carrier and the modulating waveform (the information or intelligence the signal carries). A plain carrier has a line spectrum, IE it only has energy at one frequency (ideally), but a modulated carrier has a spectrum that is spread around the carrier line spectrum, and it consists of all the products of the carrier and the modulating wave. The finite chunk of spectrum occupied is called the bandwidth of the signal. The more intelligence the modulating waveform contains, the more complex this waveform must be, and the more bandwidth the signal will require.

This is a highly simplified explanation because I don't feel like typing in all the equations using an ASCII editor that won't do them justice. Shannon's information theorem is involved, and the equations describing the various forms of modulation are involved. Consult a good textbook for all that.

In <4ebf5sINN6i3@oasys.dt.navy.mil>,
beckley@oasys.dt.navy.mil (James Beckley) writes:

>...What exactly is bandwidth?

Literally, bandwidth is the amount of electromagnetic spectrum occupied by a signal. It is directly related to the rate of information being carried by that signal. An unmodulated signal carries no information, and occupies (theoretically) zero bandwidth. A frequency-shift modulation signal with 1000 bits per second of data occupies (theoretically) 1000 Hz of bandwidth. NTSC broadcast TV signals are 6 MHz "wide".

"More bandwidth" means faster information transfer. Each bit still takes the same amount of time to get from "here" to "there", but you can fit more bits in, either simultaneously or closer together. It's like a wider road; each car still travels at (theoretically) 60 MPH, but more cars can go by each second.

>Normaly it must work!

Not really. Although the frequencies seem the same, the modulation is completely different. The TV satellites use FM, with a bandwidth of 36 mHz. ATV uses VSB, with a bandwidth of about 6 mHz. The two systems are, therefore, incompatible unless the ATV users are trying out FM, which is not popular due to the bandwidth.

You are far better off getting a separate system for your ATV.

As I understand it, this is not a problem. The internet can have a variety
delays as the information progresses from one node to another. The only
concern I have is dropouts. If the phone were to drop out, the SLIP connection
is lost and you have to go through the initialization process again.

I don't know when the 70cm packet station will be up and running. In
the U.S. for a card send your card and info to:

N6JLH
Dave Larsen
P.O.Box 1501
Pine Grove, Ca
95665

There's a list of other QSL addresses but I don't have it on me.

Amsat is debating having a yearly contest on the satellites, something besides Field Day.

Should there be one?

I would say YES. At least one every quarter. For us beginners (no code TECHS)
it would be a great way to work some DX and other countries. The bands would
be full with contesters looking to make a CQ.

Absolutely not. Basically the person with the strongest uplink
wins at the expense of everyone else. Although the transponders
may be 100-200 kHz wide, they have a fixed power budget and
operate in a linear fashion. As a result several strong signals
would dominate the transponder and push everyone else's signals
into the mud. Aren't there enough contests already?

I also say NO to contest on any of the birds

Todd,
You are right about the downlink power budget
I have heard may stations on ao-13 who were several DB LOUDER than the beacon
I have also seen the effects of a strong signal on other weaker signals..
Last year I and others tried to work a station who we could just barely hear
I listened to others who attempted to work that staion with little
luck. That station could not hear them . Their signals on the downlink
side were 4-4 and right up there with
the beacon. that station could not hear then. I doubt if he could even
copy his own dowlink signal
Another station came up I'll bet he was at leat 8 - 12 db stronger
than the beacon since he was about 3 s-units more than the beacon was

He made his contact and then that was all he could do was brag to
the other station about how good he was :->
needles to say I then let him know about his bad operating practice !

What can we do about that ??

: such a link without problems ? Note: the MSAT satellite is geostationary
: and would present a 300 odd msec. propagation delay It is connected
: to the terrestial phone system through a gateway.

Since when TCP/IP was invented a 300 baud modem was screamingly
fast, and most people who owned or leased modems had 75 or 120 baud
because 300s were too damn expensive. TCP/IP will run just fine, albeit
rather slowly. No web browsers on that link. :-)
You may have to tweak your software a bit to adapt to the
propagation delay, but it is a common tweak, RTFM or call tech support.

While this is true, it is also worth pointing out that TCP over SLIP/PPP,
even via terrestrial links, already encounters fairly long round trip
times, in some cases comparable to the RTT via a geosync bird. I suspect
the tuning required is quite similar in both cases.

Dear Geert,

over here in Europe FM-ATV seems to be much more common than in the US.
So having a try using the sat-receiver for 23 cm FM-receiption could be
successfull.
Due to the different used bandwidths (36 MHz commercial, 12 MHz ham-radio)
the results will be worse than with special ham-radio equipment. But some
receivers
have an option of adjusting the bandwidth. Additionally the sensitivity of
sat-receivers
is very low. So you'll need a low-noise, high-gain pre-amp (> 40 dB gain)
for the
amateur-radio band. Concerning frequencies and material support I'm
unfortunately
not able to give any hint, because I'm satellite-operator and no ATV-ham.

Todd, you are absolutely right in as far as the type of contest that
you have in mind, but I believe what is beling proposed is more in
the line of the technical competition that is done regularly on AO-13.
The object of the contest is to see who can copy the weakest of
an ever decreasing string of CW uplinks.
If they are considering a contest like we hear on the HF bands we
will all suffer the results of transponder overload.

One doesn't win contests by making it impossible to hear the other
stations.

I'm looking for a diagram of Dr.Ralph Taggart's "Satellite Zapper"
turnstile antenna for the polar orbiting satellites. Years ago I picked
up a file that someone had Ziped up and posted to one of the BBS's with a
drawing of it, but at some point when I was "Cleaning House" I tossed it.

If you have it, or can reference me to a magazine,month,year that has it
I'ed really appreciate it.

I know..... one should never "Clean House" :-(

Danny,
On shortwave WA3NAN broadcasts the missions on Single side band. Freqs
are:

3.860
7.185
14.285
14.295
21.390
21.395
28.650

In N.Y. I pick them up best on the first 2 freqs.
During Sarex missions listen in on 145.550 and on the Mir docking missions
listen on 145.840 when the craft is overhead of your area.

If you're thinking in "HF style contest" on the birds, i say "That's
totaly non sence!
It come to my mind a couple questions:
1- for what purpouse?
2- in whitch bird(s)?
3- what about the others who don't have visibility?
4- QRP only?
and i'm sure you're thinking in lot more...
I think all the answers go to the same word: NO

But, if you think in a ZRO test, or any other kind, but always thinking
that a satellite has a limited power budget and the winner is not the
"top power", but the "big ears", than i say YES.

Mike Gathergood (Mike@g4kfk.demon.co.uk) wrote:

: I didn't know France had switched to PAL. When did this happen?

There's rather a lot of PAL tv in France.

SECAM uses FM on a subcarrier to convey the chroma, so if you try
fading and mixing between sources, the capture effect switches the chroma
more abruptly than a smooth fade of luminance. French studios usually are
PAL and the signal only gets converted to SECAM as it's shipped out for
broadcast. If you think of France as a PAL country that just happens to
have SECAM domestic TV receivers...

A new release of MacGPS is now available. MacGPS is free software which allows transfer of waypoint, routes and track logs between a Garmin GPS receiver and a Macintosh computer. New features include a rendered topographic world globe showing your current location. There are also some bug fixes, so everyone who uses MacGPS should get this new version. Download it from:

ftp://mirrors.aol.com/pub/info-mac/sci/larrys-mac-gps-04b8.hqx

or the info-mac mirror site which is closest to you. After you download the file, drop it on StuffIt expander to extract the application.

> stations.

Say what? I didn't say it would be impossible for the power station
to hear others. His uplink power in no way affects his ability to
hear. In fact, if the power is due to using something like an EME
class antenna array, he'll be able to hear anything that makes it
above the elevated noise floor of the transponder. While transmitting,
his signal will cause the AGC circuit in the transponder to drop
everyone *else's* signal to below the average user's noise floor.
You can win contests by making contacts or preventing others from
making more contacts that you. This topic has been beaten to death
on the VHF reflector for VHF+ contests and on the satellites it
is no longer a local issue but a global one.

Simply listen on AO-13 when someone is using an uplink power that
results in a downlink signal significantly higher than the beacon.
Their QSO continues without a hitch, but everyone else's QSOs
suffers big time.

On Field Day, this is generally not as big a problem as few Field Day
stations are strong enough to dominate the transponder, certainly
not for the few additional points one gets after getting the satellite
bonus.

What benefit will a satellite based contest serve? There is already
a "contest" to measure your stations receive capabilities, which
is where people's effort should be placed as better receive capabilities
benefit everyone.

For completeness:
On satellite links, there is the additional problems of errors. Common
TCP implementations think errors indicate congestion and those implementations
will, besides resending the complete window, invoke all kind of congestion
control mechanisms like window decreasing and slow start.

However, given a data rate of 4800bps, I don't think this will be a major
problem, if at all noticeable. But if you go to higher rates like 64Kbps,
384Kbps, 2Mbps..., this will become rather serious.

Also note, that tuning some TCP parameters can not be done per session.
So, if you have a station that connect to both a satellite network and
a LAN, you might not be able to tune your TCP to be optimal for both
cases.

FACT: AMSAT already supports satellite contesting, for AMSAT promotes and sanctions the ARRL Field Day "contest" on satellites. Don't believe me? Check out the AMSAT WEB homepage.

Some may argue that the ARRL Field Day event is not a contest, but call it whatever you want, for under the cover of the words ARRL Field Day "event", its a CONTEST!

So since AMSAT "supports" satellite contesting, why woun't AMSAT support other satellite contest?

Some say they don't want satellite contesting to ocure because they don't want all the "BIG GUNS" to hog all the satellite battery power. So what! AO-13 is going to crash anyways!!! Until then, the solar pannels will recharge the batteries. Lets get the most use out of the the bird before it burns up!

I think its more of a "religious" and "political" issue. AMSAT needs to be in political alignment with ARRL, so they allow the ARRL Field Day contest to occure. However, those powers to be don't personally like contesting, so they don't support satellite contesting!

Kind of two faced double standard if you tell me!!!

Tom...

It is not a matter of the BIG GUNS accessing the bird... but of PROPER
and respected operating procedure.. Like not operating stronger than the
downlink beacon !

It does not taked a BIG GUN to trash the transponder

I have even heard FM signals on the thing !

It is either a lack of knowledge or RESPECT and proper operating procedures.

The BIG GUN was indead a problem on AO-21 but that is another story.

How is contesting related to using too much uplink power?
I would say a contest is the ideal way to educate users about uplink
power. When many stations are active, a few strong ones will surely
attract attention and can be asked to lower their power.
On a sat like ao-13, it is easy to arrange for a few monitoring stations
that just blacklist those stations that run too much power and don't
reduce it when asked.

> I didn't know France had switched to PAL. When did this happen?

France has used PAL for production and distribution for years. It's only the transmission that is SECAM. Anyway the list is for video BUGs not broadcast TV.

Cheers
Dave.

Multiop stations are often scanning the band on receive while calling CQ.
(Some of the hotshot HF contesters do this singleop.) Somebody who's *real*
obnoxious about it will soon find nobody wants to work him. The
satellite's not visible to everybody at once, when the big bad guy's
out of sight everybody else can run stations like crazy. I think (sure,
just my guess, but then your opinion is just your guess) that, with the
right set of rules, it would be counterproductive to seize the transponder.

Phase 3D's supposed to have a auto-notchout gizmo to prevent this,
BTW. We can have the same argument again after it goes up. Assuming
current schedules, couldn't get a contest organized and publicized
much before it goes up anyway.

>What benefit will a satellite based contest serve?

Same as terrestrial contests. Gets a bunch of people on at once for
intense activity, gives people a deadline to work toward -- I had
a 220 MHz beam in the garage for several months; for some reason
it actually got on the roof the week before the January VHF Sweepstakes.

269. Looking for homebrew 2m/70cm lna's

Newsgroup: rec.radio.amateur.space
Date: 1996-02-02 00:00:00 UTC
From: Danie Brynard <danie.brynard@pixie.co.za>
Message-ID: <4esjr5$bqa@hawk.pix.za>
Source record: 23036

I am looking for references etc to a good and easy to build 2m and
70cm LNA for satellite use. I recently build a 2m LNA with relays
with a BF982. The relays caused the NF to be very high. Did other
hams experience this as well ? is the general tendency to go
without relays for lowest loss ? which relays are best and cheap ?

This "contest" already exists. It is called the ZRO test and measures
how far below the beacon you can copy a CW signal. This is why I assumed
an HF style contest.

From: "Walt W.", dfheli@gramercy.ios.com
Message-ID: <4esq1s$qlf@news.ios.com>
Source record: 23038

Hello

I need schematics and Pods/probes for a
K102D Gould/Biomation Logic Analyzer.

If you have schematics and can
not 'bear to part with' them, then perhaps
you could photocopy them and send them to me
via UPS/COD for the cost of the service and shipping?

I also need (4) pods/probes, I would like to pay $0,
but otherwise if the cost is reasonable, I am sure
we could work something out?!

Many Thanks,
Walt W., 96.02.01

I would like to hear from other hams who have interfaced their
PK232's to a 9600 buad modem. I have a PK232 and a G3RUH 9600
modem.

Main points are:
- which I/F was used ?
- which PC s/w goes with that ?
- how well does it work ?
- which 96 modem was used ?

Also on the new AEA DSP modem: is it possible to DOWNLOAD from the
PC new modem s/w ? Can one write your own and download ?

273. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1996-02-02 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4eu34u$sku@blackbird.afit.af.mil>
Source record: 23040

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)
```

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293

In general there are enough listeners out there on any particular satellite pass that calling CQ will get you a contact. The birds are congested enough that finding a quiet spot on the more popular ones (e.g. RS-10/11) is hard to do. Adding extra traffic with a satellite-focused contest would overload them such that you'd probably have *less* chance of making a contact.

On top of all that, add in the temptation that contests bring to bump your power level and elbow your way onto the bird, and you'll end up with what I heard a few years ago during Field Day. Someone with a very strong signal kept calling CQ CQ CQ and his call sign 3-4 times, over and over, waiting a bare fraction of a second between each call. Since this was on AO-21, an FM bird (one QSO at a time), all he did was monopolize the entire pass with his calling. He never did make a contact, nor did anyone else.

A Satellite-focused contest would be an interesting experiment to see how our Amateur satellite fleet handles extreme overload, power management, battery failures, and other such things, but I'm not sure it'd be worth it.

If you want to have some long distance chats with a Tech license, satellite communication is the way to go, but you don't need or want a contest to "help".

I vote NO.

Picked up an Icom 820H today but had to take the demo. COuld someone
please send me the pinouts on the ACCY connector - they aren't the same
(as I found out) as their other HF rigs!

Thanks and 73 de Bob
N3FTU

Hey -- don't blame AMSAT!! A thread developed on the amsat-bb@amsat.org mail exploder asking the question, and it generated a lot of replies.

If by "they" you mean the AMSAT Board/Officers, this is >>NOT<< a topic of discussion in those circles.

Tom Clark, W3IWI
AMSAT Director & President Emeritus

The extra steps for military chips and components are somewhat varied, depending on exact component and application category. One screening is higher rates of finished lot inspection and testing. Another is more thorough inspection and testing at each step of the fab process. Then there are specific environmental tests, depending on the application. These can include operation over a wide temperature range, immunity to radiation, tolerance for shock and vibration, etc. Some of the highest grade components, e.g., components which protect human life in a space environment, would certainly receive 100% inspection all the way back to the silicon foundry. This type of reliability is not generally achieved with only post-manufacture testing. It has to be planned from the beginning.

>
>Dave Covert, KB5GOG

Dave -- RUDAK is intended to be a general purpose digital package. Take a wideband uplink, carve out an IF range. Put a bunch of DEMs (tailend of a modem) on that IF, some discrete, and some DSP. Then allow the digital bits to be piped into some MOs (the other half of a modem) either directly or via an onboard computer, and stick the MO'd signals on a wideband downlink. Allow the "crossbar" switch that connects any MO to any DEM to be programmable from the ground. And use some of the MOs for special signals generated onboard (like pictures from the cameras, raw data from the GPS receiver, spacecraft telemetry, etc). That's RUDAK. In short, it's whatever people want it to be (providing somebody writes the software!).

Thanks, another kind person dropped me the rest of that file..

Oscar 10 is suprisingly well behaved "when it is working"
I am hoping to add another klm 22c (stack with the klm I have now)
sometime in spring, to help me with the mode b downlinks and a little
more punch on terrestrial ssb.. So I really will be looking forward
to old ao-10 hanging in there for years to come.. hopefully can put
the dead battery time to catch up on the qsling..hi

Do you operate any other modes and sats?

>copy his own dowlink signal

Friends,
Please correct me on any bad newsgroup etiquette, I am not sure
when its appropriate to express myself..

As to the alligators on the sats, I have only been working the birds
for a year and I must say overall most of the operators show a great
deal of class.. However one of the first things I discovered is the
great need to have the best recieve as you possibly can. I do the
best I can, but occasionally the station I am working will give me
a 5-7 or so signal report even the my downlink sounds like its in the
mud.. I learned to cut back at that point realizing that I have no
way of knowing how much metal is pointing at the sky on their end.
I agree about the beacon also on 13.. but judgement on 10 should be
used..

I enjoy fo-20 work as well, and that that is where your point really
is driven home.. I have heard cw operators just killing the downlink
to the point that you can hear the chop chop in the rest of the qso's
on the bird.. I experimented with a little cw on both fo-20 and ao-10
and was quite amazed at how little power produced a decent downlink..
5watts produced an echo on ao-10 when it was all I could do to hear
my downlink with 90watts ssb..

Mike you may want to take a look at quiktrak.. I saw an old copy of
that program and I understood it "at the time" that it was to be
continued to be developed to point your rotor at cellestial objects
as well.. the version I a saw had it on the menu, but it did not work,
I think it was either to be developed or was available as an add on..

I know quiktrak has works well with the kct tsr for tracking...

The main reason I see for allowing satellite contests for field day is that field day is generally a club activity and having a satellite station exposes satellite operation to hams that do not use the mode.

As far as I'm concerned we have way to many contests already. Field day is the only contest that I support, since it involves so much more than just firing up you multakilowatt station and seeing who you can step on. But I guess different strokes for different folks.

287. Blown Powersupply in Tek Scope, Yuk!

Newsgroup: rec.radio.amateur.space
Date: 1996-02-03 00:00:00 UTC
From: "Walt W.", dfheli@gramercy.ios.com
Message-ID: <4euf8h$t0t@news.ios.com>
Source record: 23054

Hello,

My Tek-465-B, sputtered and choked the other day,
and now all is quiet.

What I need this week is the Tek-465-B Service Manual, I did
buy a Tek-465 Service Manual this week but it just is not
similar enough to fix the powersupply.

If anyone out there has a Tek-465-B Service Manual they
would like to trade for an excellant condition Tek-465
Service Manual, that would be great.

How about sending me a photocopy of the Powersupply
schematic? or a scanned pwrsply.gif file?, via mime attachment.

I would really appreciate any effort extended to me.

The powersupply is sagging on all the outputs and more...

I think the +55 vdc full wave bridge rectifier has a shorted
diode in it. Since this supply is also sagging and it is the
reference voltage for the lower voltages.

Thanks for the help,

Walt W.

Angus and others bring up a good point, although I am sure that Instantrack was never meant to do other than track earth satellites! Shortly, the need will surface in which we need to track planets, such as Mars and Venus. At the time of the comet collision, I wished I had something to track Jupiter! Shortly there will be emissions on 438.1 MHz from a Mars probe. Tracking programs for planets are NOT trivial but I too would like to locate something similar. Cliff Buttschardt W6HDO

The vast majority of stations that participate in Field Day do
so under less than ideal conditions. They erect stations in
under 24 hours that are not permanent stations, but using
available means to support, rotate, and power their radios.
As a result, few EME class stations are erected for Field Day.
Someone has probably done it and will prove the rule. ;-)

> So since AMSAT "supports" satellite contesting, why woun't AMSAT support
> other satellite contest?

The ARRL has long maintained that Field Day is not a contest.
You can choose to disagree with that view, but that hardly
makes AMSAT a supporter of satellite contests.

> Some say they don't want satellite contesting to ocure because they don't

> AO-13 is going to crash anyways!!! Until then, the solar pannels will
> recharge the batteries. Lets get the most use out of the the bird before
> it burns up!

It has little to do with battery power and much more to do with
a fixed power budget. The transponder of *any* satellite whether it
is AO-13 or any other bird, has a fixed power limit. The transponders
are linear in operation. As a result, the strongest uplink
signals yield the strongest downlink signals. If the uplink signals
combined exceed a certain maximum, the AGC circuitry of the
satellite reduces *all* the signals. So whether the batteries are
in great or poor condition, the same result occurs, once the
AGC has been triggered, the loudest uplink dominates the downlink.

I don't know where you concocted this idea, but I doubt it has
little basis in reality. Read *any* text on amateur satellites
and they'll explain why traditional HF style contests are a
bad idea on the birds. Would you care to name names as to
who personally doesn't like satellite contesting? This is an
engineering issue not a personal preference issue.

> Kind of two faced double standard if you tell me!!!

Please explain. What double standard and in what way is
it two faced?

73,
Todd

: it sounded quiet out there. Years ago I could hear the audio on a close
: pass with just the rubber duck in the back yard. I'm not sure how current
: my Freqency list is, and for that matter how many of these sat's that are
: listed in the TLE are still transmiting pictures.

: Could someone please "Fill in the Blanks or correct" and either E-Mail it
: back to me or post it here in case others might want the info also?

NOAA 12 & 14 are the only active US orbiters; most of the Russian Meteor 2 series have been quiet for years, except Meteor 2-21, Meteor 3-5 is off and on.

You may wish to subscribe to this weather satellite listserv for info:

Hopefully additional launches will bring the orbiter program back up to par but who knows with all the congressional game playing.

Can any body tell me where can i get some information about mobile
satellite systems. I need some information about Iridium, GlobalStar
and Inmarsat-P. The only place whitch i now is
http://www.ee.surrey.ac.uk/Personal/L.Wood/iridium.html.
If any body nows something about Iridium antennas i would apreciate.

Thaks.

Radio Meteor Observation Bulletin No. 30 Feb 1996

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East),
elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA, Bratislava
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

January 1996
Quadrantids

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Notes:

. * maximum Quadrantid activity on the morning of Jan 4.
Best forward scatter conditions for this setup between 2h and 8h UT.

Maurice De Meyere / Chris Steyaert

Observer: Werfried Kuneth
Location: Villach, Austria (13 53' E, 46 37' N)
Antenna: dipole with reflector, direction east.
Frequency 1: 59.250 MHz, SSB mode, 150 kW TV video carrier
in Bucaresti, distance 950 km, east.
Frequency 2: 48.246 Mhz, SSB mode, 100 kW TV video carrier
Location Germany, distance 550 km, northwest.
Dipole used alternating with frequency 1.
Receivers: Several, incl. homemade converter. AGC enabled. No preamplifiers.
Observing method: the audio signal is fed into a real time FFT display
(FFTDSP program from AF9Y) on the PC where 640 channels of 2Hz width
are recorded and stored continuously. Every meteor reflection produces
a distinct whistle, which is recorded easily by the real time FFT
program.
From the saved .GIF images the total length of the meteor reflections
if calculated automatically.

The following figures give information about the total length of the
meteor reflections during one hour, expressed in percentage of time.

Hourly reflection duration percentage on receiver # 1:

```
Jan UT
1996 5h, 6h, 7h, 8h, 9h,10h,11h,12h,13h,14h,15h,16h,17h,18h,19h,20h,21h

```

Notes:

. 0 (zero) means no data available.

. the complete figures for Oct, Nov and Dec 95 including summary GIF files
are available via anonymous ftp at:
ftp://charlie.luc.ac.be/pub/icaros/werfried
or at the radio pages of the International Meteor Organisation on WWW.

. local time conversion: one hour ahead of UT (06h00 UT is 07h00 local).

. remarkably enough, no dip in counts is visible when the Quadrantid
radiant has a high elevation (between 5h and 8h UT), and for the given
transmitter data. Anyone has an explanation?

. Correction for the Dec. 1995 RMOB: The figures shown are also "total
length of the meteor reflections during one hour shown as percentage".

Werfried Kuneth

```
Observer: Ingo Reimann

Ingo Reimann / via Jeroen Van Wassenhove

Observer: Ton Schoenmaker
Location: Roden, Netherlands (6 degr 26' E, 53 degr 08' N)
Frequency: 66.89 MHz
Transmitter location: Krakow, Poland, 120 kW, distance 980 km
Antenna: Horizontal Yagi, 5 elements, geographical azimuth 110 degrees (ESE), elevation 15 degrees
Receiver: Homemade convertor 65-67 MHz to 28-30 MHz + Barlow-Wadley 0-30 MHz receiver; total sensitivity 0.3 uV for 20 dB S/N with a bandwidth of 3 kHz
Observing method: Brown strip chart recorder, 18 inch/hour + occasionally listening.

Bootids 1996

Observations were made from 2 January 19h UT until 5 January 22h UT. In total 75h of observations were recorded on paper running with a speed of 18 inch/hour, resulting in about 34 meter length of recording paper. This has not been fully analysed yet. At the peak of activity there are many echoes of long duration which block the weaker signals. A simple tallying of echoes will not give a correct indication of the activity of the Bootids. During maximum the activity was comparable to that of the Alpha-Monocerotids 1995, although the Bootids have a much higher percentage of long echoes.

Bootid activity started on 3 January at about 13h UT and ended around midnight at the end of 4 January. After corrections for the obser-vability (Hines) a maximum was found on 4.33 January, solar longitude 283.29 degrees (J2000). A small extra peak was found on 3.54 January.

Below follows the preliminary result of the observations, only using relatively strong signals of 0.5 microvolt or more. Uncorrected counts of these signals during one hour intervals starting at:

```
Time UT | 2 Jan 3 Jan 4 Jan 5 Jan |
--------+---------------------------+
0 | - 15 52 11 |
1 | - 15 66 9 |

2. CONFERENCE

ACM 96 - the sixth international Conference on Asteroids, Comets, Meteors - will be held in Versailles, France, from 8 July to 12 July. It will include all aspects of studies of asteroids, comets, meteors and their interrelations. The format will feature plenary sessions devoted to the various fields of research and problems, together with parallel sessions devoted to smaller workshops, and to poster presentations.

Registration preferably before 15 May. To receive the second and the third announcement, please contact: ACM, Aeronomie CNRS, BP 3, F-91371 Verrieres, France (fax: +33 1 64 47 43 48).

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and has gradually been expanded.

Typically it contains: summaries of recent observations, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or unsubscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

How do the rotor controls (az. or el.) know where the rotor is? I am looking for the different types of informational feedback. (i.e. pots., optical/absolute encoders, electrical contacts, etc.). Any info would be helpful.

Thanks,
Joe Utter, N9ZJL

297. Contacts for WAS needed

Newsgroup: rec.radio.amateur.space
Date: 1996-02-05 00:00:00 UTC
From: Stephanie Steele <kc7dba@primenet.com>
Message-ID: <3116F405.5977@primenet.com>
Source record: 22967

Hi,

If you live in Montana, North Dakota, Oklahoma, Arkansas, South Carolina, Kentucky, or Delaware and would like to schedule a contact with me (I live in Idaho) please drop me a note. I work both P3 and the LEO birds.

Thanks to the gentlemen from Indiana and North Carolina that provided me with nice contacts this last weekend. I hope to hear from you again.

73,

Stephanie KC7DBA

298. IC820 and Pacsats

Newsgroup: rec.radio.amateur.space

From: Bob Smith <bsmith@msn.com>
Message-ID: <311638AB.1D61@msn.com>
Source record: 22969

Any ideas on a 440 preamp for the IC820? Should have TX bypass and work off of the 10 v provided up the coax for this purpose.

I'll be also in te market for one if you know of one.

Thanks ever so much.

Bob Smith

G0URW partial shack clearance
Toni has asked me to post these items on his behalf, please reply ONLY TO HIM, on 0973-601252.

Item one

Yaesu FT290R1 excellent condition, complete with 30watt 2m linear amp, with built-in pre-amp. £295ukp ovno.

Item two

SommerKamp (Also known as Yaesu) FT102 HF base station, again in excellent condition, complete with AM and FM option boards, and NARROW CW AND NARROW SSB filters. £595ukp ovno.

Collection from East London.

* AMSAT-UK CALL FOR PAPERS *
============================
The 11th AMSAT-UK Colloquium will be held at Surrey University, Guildford,
Surrey, U.K., from Thursday 25th to Sunday 28th July 1996. Current intentions
are to devote the Thursday to international/IARU matters and to structure
other subjects across the following three days.

AMSAT-UK invite authors to submit papers, about amateur radio space and
associated activities, for this event; we normally prefer authors to present
the papers themselves rather than having someone else read them in the
authors' absence.

Abstracts of Papers for presentation should be submitted as soon as possible;
the date for full submissions will be announced in a future bulletin. It is
likely that the final date will be about one month prior to the event in order
that the "Proceedings" document be available to participants.

Submissions should be sent to: Chris Jackson, G7UPN via Internet at:
G7UPN@amsat.org or direct on UO-22.

AMSAT-UK also invite anyone with requests for Program Topics to submit them
as soon as possible to G7UPN as above or to G3RWL or G6ZRU (both available
@amsat.org and on digital satellites). Invitations for papers on specific
subjects will be included in the future bulletin (about end-February).

An address for postal mail, plus information about UoS Colloquium Web pages,
will also be included in the future bulletin.

NOTE: SEND ALL OTHER INQUIRIES ABOUT COLLOQUIUM '96 TO THE AMSAT-UK OFFICE:

AMSAT-UK
LONDON E12 5EQ

* OSCAR STATUS REPORT *
======================
PACSAT AO-16: Normal BBS.

DOVE DO-17: In MBL mode on 2 meters. MBL frames being sent at random intervals.

WEBERSAT WO-18: Not monitored this week

LUSAT LO-19: Not monitored this week

ITAMSAT IO-26: Not monitored this week

WX Sats APT 137 MHz only:
NOAA 12, 14: ON
Meteor 2/21: ON
Meteor 3/5 : OFF

[Info via Graham, VK7ZO]

* OOPS! *
=========
In last week's issue of SpaceNews, U.S. Astronaut Shannon W. Lucid was mistakenly referred to as a male. Sorry for the error, and my apologies to Shannon.

* DOVE NEWS *
=============
DOVE is in MBL (Microsat Boot Loader) mode while controllers sort out what's wrong with the satellite. The packets being seen in the 145.825 MHz downlink are short telemetry frames sent from 'DOVE' to 'MBLCTL', which is MBL Control. They are sent at more or less random intervals from a few seconds to several minutes. The primary purpose of this mode is to allow software to be loaded. This telemetry is in a binary format that may have been published several years ago but is of little interest because testing has shown it's not especially accurate and the Microsats are seldom in this mode for very long. As controllers continue the process of troubleshooting the satellite, other "strange" downlink packets will continue.

[Info via Jim White, WD0E, of the DOVE Team]

* GOES-9 NEWS *
===============
GOES-9, one of a new generation of U.S. weather satellites, is now on the job over the Pacific Ocean. The satellite has been positioned in orbit 22,300 miles above the equator at 135 degrees west longitude, enabling its cameras to view the western United States, Hawaii, Alaska and much of the Pacific Ocean, according to the National Oceanic and Atmospheric

Administration.

GOES-9 was launched May 23 and was positioned over the Gulf of Mexico for testing. Starting in December, the satellite was slowly moved 3,130 miles westward to its present location. The new satellite teams with GOES-8 to give full weather-camera coverage of the United States and adjacent waters.

Louis Uccellini, director of the NOAA office of meteorology, said the advanced instruments on GOES-9 will provide digital imagery of clouds, temperatures and moisture, all of which will improve short-term weather forecasts. Both GOES-8 and GOES-9 also measure solar activity and the Earth's magnetic field. Additionally, the satellites can aid in rescue services by relaying distress signals from people, ships and airplanes.

GOES-8 was launched April 13, 1994, and is now positioned at 75 degrees west, overlooking the east coasts of North and South America and well into the Atlantic Ocean. GOES-7, which had been in service for eight years, is being replaced by GOES-9. The older satellite remains in orbit and will be maintained on a standby status.

[Info via the Associated Press]

* W6OLO SK *
============
Jim Woods, KC7FG reports of the passing of Nick Marshall, W6OLO. Nick died on 25-Jan-96 in his sleep at the age of 81. Nick had been an Amateur Radio operator since the 1930s, was one of the founders of Project OSCAR, and one of the principals behind the early OSCAR satellites. He was active with Lockheed Martin at their Palo Alto Research Laboratory as a staff scientist up until his death. He was a charter member of the LERA (Lockheed) Amateur Radio Club in 1957.

Nick always looked to the future and welcomed great challenges. He actively promoted a repeater on the moon and a mission to Mars. He will be truly missed.

Satellite Frequency Still transmiting Pictures?

NOAA 9 137.62 I heard that this one is dead (YES!)
10 137.50 Safestate, NO APT
11 137.62 AVHRR damaged, NO APT
12 137.50 * operational morning descender, APT OK
14 137.62 * operational noon ascender, APT OK

METEOR 2-16 137.40 NO APT since LONG, down
2-17 137.30 NO APT since LONG, down
2-18 NO APT since LONG, down
2-19 NO APT since LONG, down
2-20 137.85 NO APT since LONG, down
2-21 137.85 * operational, weak (antenna not depl.)
3-2 NO APT since LONG, down
3-3 NO APT since LONG, down
3-4 137.30 NO APT since LONG, down
3-5 137.85 * operational, now in darkness (off)
3-6 NO APT since LONG time

I marked the operational birds with an asterix. Forget the other ones,
they reached their op.lifetime and will NEVER come back. The only secret
is MET 3-6 - transmitted APT shortly when just put in orbit, nothing since
then. Met 2-21 is VERY weak, the antenna-boom failed to deploy.

Hope that helps

Peter Henne (henne@gmd.de)

All I want and NEED is one satellite contest. It should be international in scope and sponsored by AMSAT. It will take place during Field Day.

WHY?, Because field day is the best opportunity to show-off our part of the hobby to other hams. The first priority of the contest would be the display and use of an OSCAR station to others(Portable operations most likely required). Second priority, make QSO's & have FUN!

That's ALL I want. One 24 hour long contest and to recuit more hams into AMSAT. One little 24 hour contest shouldn't tax our satellites batteries too much.

And who knows, maybe they'll like satellite operation so much, that they'll make a Phase 3D donation right on the spot. ;-)

310. Antennas for satellites, advice

Newsgroup: rec.radio.amateur.space
Date: 1996-02-06 00:00:00 UTC
From: Jim Fellows <jimf>
Message-ID: <4f8kqc$sde@murrow.corp.sgi.com>
Source record: 22977

Hi all,

I'm interested in working satellites using primarily SSB voice and secondarily packet. I've got my rig and tracker/predicter progrtam fired up and have listened in on FO-20 and some of the other birds. Just yesterday I got up the gumption to call up an antenna manufacturer and place an order. The call ended up being more of an advice line than an order line. I'm happy that I did not get just a salesman that was willing to take my money, but now I'm more confused.

All that I have read so far in the "Satellite Experimenters HandBook" and other publications recommend *switchable sense* circular polarity antennas. Well the advice I got was to use either fixed sense, that being RHCP, or linearly polarized antennas with more gain. The reasoning being for the former is that almost all the non-LEO birds are RHCP and that *should* be sufficient. The reasoning for the latter is that the approximate 3 dB loss between circular and linear polarizations can be made up by higher gain arrays (stacked) and this also would then work better for the weak signal terrestrial SSB work that I do.

Since I'm new to satellite work I would appreciate the wisdom of experience for advice.

Thanks,

Jim KF6AGJ

Hello,

I'm afraid to say it but you have another Amateur radio neophyte on board. :-)

I'm a software engineer and I am very interested in getting involved and learning Amateur radio communications with satellites and SETI. I went to a local ham fest and learned a little. Should I buy the Amateur Radio Handbook? It looked like it had good information. I'm not new to writing code or electronics and computers in general, I've been involved for 10+ years so technology isn't new to me. However, I have no idea what band, frequency, radio, antenna, etc. I need. Where do I get the low down on what all the buzz words mean? It seems there are many different avenues one can follow, I'm looking for satellite linking and SETI information, what equipment and the like will I need?

E-Mail is not only accepted, but encouraged. :-)

Thank you,
Joe Lambert

Source record: 22981

Greetings All:

I have heard some exciting rumors about a Russian phase 3D type satellite that is in operation that offers a 2.4 GHz downlink which apparently offers a good SNR with relatively small capture area receiving antennas. I also noticed a recent posting regarding the RUDAK transponder and wonder if it is the one.

I would like to obtain more specific information and wonder if there is a site on the internet where I could find it? I took a look at the AMSAT WWW page and downloaded a description of the Russian amateur satellites but did not see anything on a Russian P3D bird.

316. RS-12 in Mode KT (up:21m, down 10m/2m)

Newsgroup: rec.radio.amateur.space
Date: 1996-02-08 00:00:00 UTC
From: kebsch@pdb.sni.de
Message-ID: <4fcktc$p86@nervous.pdb.sni.de>
Source record: 22983

Hi RS-12 Sat fans,

yesterday morning I heard an HAM on RS-12 (rx-10m) speaking about the downlink on 2m (mode T). Uuups, what's going on here ..??? I have tuned my transmitter to the uper edge of the transponder (~21.248) and scanned the satellite window on 2m to find my own signal ... yeeaaah .. I heard myself loud and clear (2m/70cm groundplane). :-).

During the next pass over, the sat was covering the east coast of the USA and Western-Europe; I made my first QSO via RS-12 in mode T. It was with an US-HAM. In the past we have worked us several times via RS-12 in mode K and RS-15 in mode A.

BTW: The downlink on 2m is 145.910-950 MHz. If you are scanning for your own signal you have to add upto 6 kHz (Dopler effect).

Now my question? Was this change (mode: K -> KT) planned? Will this mode be available for the next few months/years? What is planned/going on with RS-10? This sat is able to work in A, K, T, KA, KT, like RS-12. Currently we have mode A on RS-10, or does it changed too and "I don't heard the bells"? :->)

Anyhow: Good luck and a lot of QSO's via RS-12, mode T.

So, are the MOs and DEMs on P3D spec'ed out to generate 56kb traffic?

You said that some of the demodulators would be discrete and some
would be DSP.
I imagine that the DSP units will have to have instructions to
clean up the signal. Will 56kb be one of the 'installed' programs? If
not, will I expected to upload the instructions to the DSP whenever
I take control of one of the DSP dems?

The space shuttle can be monitored on the following frequencies:

296.800 MHz Voice (AM)
259.700 MHz Voice (AM)
243.000 MHz Voice (AM)
279.000 MHz Voice (AM)
416.500 MHz Data (Narrow FM)

319. Help Icom IC-970/H ,9600 Bd satellite modificatiaon ??

Newsgroup: rec.radio.amateur.space
Date: 1996-02-08 00:00:00 UTC
From: r.serna@eworld.com
Message-ID: <4fes3i$hoc@hp5.online.apple.com>
Source record: 22986

I am interested in the modification of the Icom ic-970/h
please send me information and esquematic diagram of the modification.

My adress is:

Ramon Serna EA3CFC
PO.Box-115
E.08750-Molins de Rei
Barcelona
Spain E.Mail:R.Serna@eworld.com

Thank`s for your Help

Joe, email to your address listed above bounced. I'm not going into
any detail this time. Try LYCOS search for AMSAT and go to the home page.
Search for the n7ryw asatpage.html too.

321. Newsgroup Servers....

Newsgroup: rec.radio.amateur.space
Date: 1996-02-09 00:00:00 UTC
From: kleite@carajas.homeshopping.COM.BR
Message-ID: <9602090148.AA23323@carajas>
Source record: 22988

Dear OM,

Thank you for reading my message. I looking for
servers names for newsgroups below:

uk.amateur.radio
rec.radio.shortwave
rec.radio.scanner
rec.radio.noncomm
rec.radio.info
rec.radio.broadcasting
rec.radio.amateur.space
rec.radio.amateur.misc
rec.radio.amateur.equipment
rec.radio.amateur.digital.misc
alt.radio.scanner
alt.radio.pirate

I am using Internet In A Box and that program was pre-
configured with one server, for Internet In A Box newsgroup only.

I would like to thank you for any help in advance!

Anyone defeat the tuning step on the IC-820 on PACSATS, specifically AO-16.
Trying now to set up for this bird. Using the TAPR DSP-93 as the modem.
Thanks in advance for any help.

Hope to catch you on AO-16 this weekend!

Only authorized telecommand stations will be allowed to control items
on the satellite or uplink code. If one of the DSP modems is configured
for 56kb, you'll be able to use it. If it isn't, you won't. It's my
expectation that the system will act as a regenerating repeater, not
a switch node, so whatever you uplink, it'll clean it up and immediately
retransmit it.

324. RUDAK on AO-21 - was P3D/RUDAK/digital

Newsgroup: rec.radio.amateur.space

What your describing here appears to be a somewhat garbled interpretation
of the RUDAK experiment on the AO-21 spacecraft.

AO-21 was (past tense) a Russian satellite, with a Russian-built amateur
radio payload as a piggyback payload. In addition it also featured the
German RUDAK experiment. When in operation it was extremely successful,
and gave just a hint of what's possible with a sophisticated piece of
hardware in space, combined with excellent software and innovative hams
on the ground. Even though AO-21 had SSB transponders it was able to
operate as an FM satellite because the FM 'waveforms' were programmed in
to the RUDAK computer.

Unfortunately when the parent satellite finished its mission there
weren't funds to continue its operation and it was shut down, and AO-21
was lost in the process.

Still, it gave hams a tantalizing look at what's possible with RUDAK and
a decent bandwidth connection.

>too would like to locate something similar.

Instant Track, and other typical satellite tracking programs, are only designed to track satellites which are in orbit around the Earth. Sometimes additional 'special' objects like the Sun are included because they're important for certain types of calculations (e.g. when is the satellite in shadow). In theory the moon can be treated just as another satellite in orbit around Earth. In practice it's so far out that the Sun's gravitational pull is a significant pertubation on its orbit, and the moon's relatively large, so the assumption that satellites are point masses can no longer be considered valid.

However, there are many *EXCELLENT* ways to track the planets - going back to the ancient Greek and Babylonian astronomers. Mechanical wheels called 'orreys' were extremely popular for predicting the locations of the planets with excellent accuracy. (As a side comment, many of these devices still work - even though they make the initial assumption that the Earth is the unmoving center of the universe. Which only proves that any coordinate system can be made a valid one if you stick with it.)

But we're talking about computers here, not museum pieces. Just get a good star chart / planetarium simulator computer program. I've used 'Dance of the Planets' on the PC and "Voyager" on the Macintosh. Voyager is particularily good for showing where the planets are and similating different scenarios through time. The "Orbittrack" earth-satellite tracking program for the Mac even makes an output file which is compatible with Voyager. I can take a large object (i.e. the shuttle, Hubble, UARS, GRO, some secret military satellites - shhh!) and predict when and where they'll be passing overhead in Orbittrack, and then output the file to Voyager which will show me the constellations it will pass through.

For the Mars beacon using Voyager will be a piece of cake to just input the solar kepleraians for the spacecraft after it's launched, and then the program will show you where to point your beams antenna.

Of course getting good enough gain and an adequate pre-amp is up to you
...

>
> Anyone know how this worked? Commercial or amateur?

Actually it's not even that difficult or unique anymore. At the North Pole you're far enough away from everybody else so you don't have too much competition to use the low altitude satellites. And all of the polar satellites eventually go close to the pole (hence the term polar satellites).

Many years ago one team used a laptop computer and UOSAT (UO-11) to determine their location and status each day. They used a standard hiking ELT (Emergency Location Transmitter) which sent a beacon which was heard on the NOAA and Cosmos satellites which are part of the COPAS/SARASAT program. The ground stations determined their location, and passed that data to the satellite operators which sent packet messages addressed to the expedition with their location.

Naturally something like this should only be done with the consent of all involved - otherwise emergency rescue teams might be sent out by accident, and you might lose your amatuer license for using your transmitter for non-amateur purposes. Your mileage may vary.

Of course today the simpler solution would be to use a GPS receiver, but I'm certain any polar team would want to use some similar method to transmit data back to their home station.

327. NORAD Two-Line Orbital Element Sets (TLE752)

Newsgroup: rec.radio.amateur.space
Date: 1996-02-10 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4fgono$2ed@blackbird.afit.af.mil>
Source record: 22994

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

>went to a local ham fest and learned a little.

Did AMSAT have a booth at the hamfest? Generally there's some good literature available, hams with satellite experience to talk to, and some excellent books to purchase.

There are plenty of brochures, and some beginner's guides you can purchase which are normally available at the hamfests. If you can't find them give AMSAT headquarters a call at 301-589-6062 and ask them for information. Or browse the AMSAT WWW site at http://www.amast.org

One excellent source I've found is "The Satellite Experimenter's Handbook" which is published by the League. 8x10 bound with a brown border on its cover. Very popular and available at every hamfest I've ever been to.

>However, I have no idea what
>band, frequency, radio, antenna, etc. I need.

A typical beginner's set up includes a 2 meter all-mode radio with a trackable beam antenna, and either a 10 meter all-mode receiver or a 70 cm. all-mode radio depending on what birds you want to operate. But there are exceptions - I've only got 2 meter FM equipment at the present which limits me to the shuttle, Mir, and a couple of specialized satellites.

It seems there are many different
>avenues one can follow, I'm looking for satellite linking and SETI
>information, what equipment and the like will I need?

Blatant plug - check out the April issue of "Popular Mechanics" for information on the SETI League. Or just check their web site (I forgot the URL)

I use a program called OrbiTrack. Should be available on radio-oriented
ftp sites or contact:

Thanks you Philip for the suggestions regarding tracking planets. Indeed
I understand that most programs track only earth satellites.
You make a good case for using the program "voyager" but most of us
do not have access to Mac programs. So far, it appears that "Dance of
the Planets" is the only alternative.
As you observe, tracking the proposed Mars probe on 438.1 MHz is not
a planet track and will require other information. Just the idea of
having to use DSP in order to obtain any infomation will turn many off.
Possibly we can still find a simple method of finding antenna
pointing information by the use of Right Assention and Declination.
This sounds like a job for a calculator! Cliff Buttschardt W6HDO

OrbiTrack is not a substitute for WiSP or PB.

Look at http://www.clark.net/pub/mackall/home.html for a beta protocol
program for the Mac.

Hello Folks,
this is our "Post-EVA TGIF message". Everything went fine, we have done our
work and retrieved two astrophysical cassettes, which were part of the
EUROMIR96-program. Now we are getting more and more into the preparations for
our return. It's friday, and we just would not feel allright if we would not
remind you about the TGIF drinks....
19 days and counting, many greetings,
Juri, Sergei and Thomas.

PC> Date: 10 Feb 1996 06:27:45 GMT
PC> Organization: Earth News

PC> In article <kenhDMEDHr.4H2@netcom.com> Ken Harris, kenh@netcom.com
PC> writes:
>> I saw an article in National Geographic at indicated that
>> members of an expedition to the north pole (if memory serves) used some
>> sort of new fangled gadget to send updates via satellite back home.
>> They had a photo of some people gathered around a notebook PC, and a
>> photo of a simple (dipole?) antenna. Anyone know how this worked?
>> Commercial or amateur?

The last few years many (southern) pole stations used KO-23 for sending email.
And pictures too! It's amateur-business so the messages have to be
non-business!

Write me direct if you want to kno more.

338. You Can Beam Messages to God for $9.95

Newsgroup: rec.radio.amateur.space
Date: 1996-02-11 00:00:00 UTC
From: miles@mail.utexas.edu
Message-ID: <miles-1102962140310001@slip-43-3.ots.utexas.edu>
Source record: 23005
Cross-posted to: sci.electronics.misc,rec.radio.amateur.space

I just came across http://www.golden.org/~startrek/

The text starts out:

"Modern technology has finally caught up with mankind's spiritual
needs. Here is a non-denominational, publicly accessible direct link
to the Heavens that can electronically beam prayers, hopes and
dreams into space, into time, ... into forever.

"Our equipment accepts your letters or drawings, and launches them
electronically at the speed of light on a powerful microwave radio
beam into deep space. As soon as they are sent, they become
available to be intercepted by God, spirits, or extraterrestrials .

"We are not attempting to sell a mystical claim or smoke and
mirrors. We are offering science fact, based on the same
technology that NASA uses to communicate with deep-space
probes like Voyager, and which modern astronomers use to study
the Universe as it was some 10 billion years ago.

"It is well known to modern science that the radio waves on which
the message is carried will endure until our present Universe ceases
to exist - another way of saying until the end of time. That is an
unprecedented lifetime guarantee!"

The page has quite a bit more text. It ends with the pitch:

"The cost is $9.95 per page. This includes the Broadcast
Certificate...with a signed and dated Authentication Seal."

I wonder who signs it...P. T. Barnum? :-)

Military or JPL spec electronics have to survive the hostile
environment of beaurocratic red tape. Other than that the parts I used to
help construct the CCD controller and frame buffer for Mars Pathfinder
were not rated much better than comercial grade parts.

340. Broadcasting Radio Station Database for you.....

Newsgroup: rec.radio.amateur.space
Date: 1996-02-12 00:00:00 UTC
From: chuck <chuck@mail.flinet.com>
Message-ID: <4fme8u$bsf@news.flinet.com>
Source record: 23007
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.noncomm,rec.radio.scanner,rec.radio.swap

Friend,

A fully functional standalone Broadcasting Radio Station Database for IBM and compatibles with more than 4,000 Radio Station records already. This program covers stations on Longwave, Mediumwave, and Shortwave. Each record contains the Station name, Frequencies, Schedule, Languages, Country, and Continent. The program sorts in same order.

What's needed to get it? Your EMail address and your Postal Mailing address for registration and future information via Post of other Radio Related Database programs. This information will be kept confidential.

If you can read a document written in MS Word(extension is DOC), request the operating instructions for the Radio Station Database Program called Voyageur. You'll get an idea from reading this document of the Voyageur Database and what it does.

Incidently, the program offered with this notice is valid until June 6, 1996.

Hope to hear from you..

Chuck

Logsat v5.1 is available from AMSAT http://www.amsat.org/amsat/AmsatHome.html and also on Compuserve in the Ham Radio Forum. I have been using it for about 2 years now and have found it to be the best (most graphical) Windows tracking program by far. The author has made great improvements to the program recently including support for the Kansas City Tracker/Tuner. He is also happy to hear from anyone with suggestions and frequently will incorporate your suggestions into the program. Program also includes a logging module and an antenna design module.

BTW, I do not work for nor recieve any compensation from either the author or LogSat Inc. I just really like the program.

Stephanie

Pole hasn't been using any of the Amateur satellites, but rather uses
older inclined geo-syncs for pictures, email etc. The bulk of their
transmissions are on the GOES 3 and LES 9 satellites.

Two years ago we utilized both the LES and GOES 2 satellites to make a
geographic north to geographic south pole internet connection with a US
ice-breaker operating up north.

McMurdo has done a quite bit on the amateur satellites.

Brent

345. Ham Radio Online goes Interactive! Check us out!

Newsgroup: rec.radio.amateur.space
Date: 1996-02-12 00:00:00 UTC
From: vbook@vbook.com
Message-ID: <4fnpc6$38f@news.accessone.com>
Source record: 23012
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.space,rec.radio.amateur.antenna,,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave

INTRODUCING HAM RADIO ONLINE INTERACTIVE!
Now you can post free classified ads, DX openings, VHF band openings
and much more. And with over 10,000 readers stopping by last month,
your thoughts will actually get read at this ham radio web site! We are not
just pointers to cyberspace - we've got actual content - feature articles,
newsletters, product reviews, real-time propagation conditions and more.

The February 1996 edition of Ham Radio Online International Magazine
is available at http://www.accessone.com/~vbook/hronline.htm

Some of the NEW February stories include a review of SkyTel's "2-way paging" system,
radio surveillance frequencies, and the effects of two-way radio operation in blasting
zones.

Ham Radio Online has been selected as a featured web site by America Online
and a Top 100 web site for the month of January by Planet Earth, Inc.
New articles are available now and we add articles throughout the month.

Ham Radio Online has up-to-date news about Amateur Radio from around the world,
feature stories, real-time propagation and auroral condition reports, real-time
earthquake and severe weather conditions for emergency communications planning,
online humor section and the Ham Radio Online Library with fully indexed (find
any section with just a mouse click) Part 97 rules and regulations.

Plus we cover broadcasting, shortwave, scanning generally anything having to
do with radio telecommunications.

And we plan to offer some totally cool new services during the coming months. As
always its free and free of ads.

Thanks to you, we had over 10,000 readers stop by during January!

Please enjoy!

73, Ed Mitchell

346. Looking for Dave Larsen, N6JLH

Newsgroup: rec.radio.amateur.space
Date: 1996-02-12 00:00:00 UTC
From: p56959@mermaids.es.hac.com
Message-ID: <p56959-1202961954520001@tamc107.es.hac.com>
Source record: 23013

I am looking for the address and / or phone number of Mr. Dave Larsen of Jackson, California. The phone number I had has been changed to an unlisted number.

I have some 'very important news' to relay to him regarding my brother Arturo (LU2EYD) who from time to time communicated with him thru the space station MIR.

Anybody having any knowledge of Mr. Larsen's address and / or phone number, or having direct contact with him (and can relay this message) is requested to contact the undersigned via e-mail or by phone direct to the following phone numbers: (310) 416-4123 office or (310) 575-3342 home.

Any help anyone can provide regarding this matter will be greatly appreciated.

Sincerely,

Jose Fernandez
W6/LU6AND

MONDAY FEBRUARY 12, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* RS-12 NEWS *
==============
The Russian RS-12 Amateur Radio communications satellite has been in Mode
KT since 02-Feb-96. Mode KT takes an uplink on 15 meters and downlinks it
on BOTH the 10 meter and 2 meter bands. Before this change, RS-12 was in
Mode K, and the only downlink was on 15 meters.

The 2-meter downlink is strong, and allows better communications performance
for groundstations who experience difficulties in operating full-duplex on
the 10 and 15 meter HF bands.

348. MIR contacts on packet

Newsgroup: rec.radio.amateur.space
Date: 1996-02-13 00:00:00 UTC
From: relliott@cyberhighway.net
Message-ID: <4fp30g$hos@host-3.cyberhighway.net>
Source record: 22917

Is there anybody out there that has information on what qualifies as a contact for MIR on packet? I have heard it just takes a
confirmed CONNECT. I also need to know the address to send the required information.

Do I have to leave a message on the PBBS on MIR?

Any help will be greatly appreciated!

Later,
Rich Elliott KC7CDK

This is essentially the same business proposition as Space Shot.
From page 99 of Spectrum Guide (930-931 MHz):

"An exotic radio service, Space Shot, once tried to get access
to this band. Space Shot billed itself as 'The Interplanetary
Communication System that Links You to the Universe.'

"Space Shot offered to help customers 'actively search for
extraterrestrial life' by sending love notes, peace messages
or birthday wishes into space on 903.0125 MHz for $5.00 per
'launch'. Its purveyors held a temporary, experimental license,
but the FCC turned down its request for formal, permanent
status in 1985.

"The Commission dryly said it doubted that the Space Shot
transmitter could activate receivers at the 'target locations,'
which were supposed to be the Sun, the Moon and 'any of the
planets in our Solar System.'

"We viewed the proposal as an intriguing test of the FCC's
pro-marketplace philosophy. Industry commenters called
Space Shot a 'radio version of the Pet Rock.'"

Sorry, can't help it if you're 'Macintosh deprived'. ;-)

Actually I just remembered that the CD astronomy program "Red Shift"
which is available on both Mac and PC platforms will track objects in
orbit around the sun. So that may be suitable.

> As you observe, tracking the proposed Mars probe on 438.1 MHz is
not
>a planet track and will require other information.

Actually - in the most basic sense, the Mars Pathfinder is a planet - an
object in orbit around the sun. It's just that it's pretty small and has
pretty sophisticated electronics (in comparison with most planets) and in
an elliptical orbit where the perihelion touches Earth's orbit and the
aphelion touches Mars's orbit.

>And pictures too! It's amateur-business so the messages have to be
>non-business!

It's a bit beyond the reach of this newsgroup, but satellite
communications with the south pole is actually fairly sophisticated. The
old ATS-3 satellite and the original TDRS-1 satellite are in fairly
highly inclined geosynchronous orbits due to drift, and over most of
Antarctica for parts of each day. In addition the purposely high
inclination LES-8 and LES-9 satellites are used for polar communications.
Those satellites are nuclear powered - something which wasn't realized
by somebody I corresponded with via E-mail from the South pole.

His sig had his location as 90 degrees South. But I never did find out
what his latitude was. ;-)

Dr OMs,
I am interested in wx satellite reception, particularly low
orbite wx satellites... As you know, they aretransmit APT
format fax information with a bandwith of 40 kHz..
THe NBFM receivers have abt. 15 kHz and WBFM receivers have >100
kHz bandwith so they are not suitable to receive the wx satellites
signals. Now i'm looking for a IF stage that has 40 kHz bandwith..
A circuit built with either ic(s) or discrete devices is welcome.
Tnx for all information... Best regards..73's
Recep Aydin Gulec

Hi. I'm a postgrad student in the UK. Currently I am head of a team that is trying to automate our NOAA AVHRR receiver system.

What I am looking for is C routines that will take the NASA two line elements, my lat and long and the time and return a direction and azimuth to direct the dish.

I am looking for routines rather than a complete program as we have to build a complete system ourselves in C.

I have seen the routines, or something similar, on one of the NASA sites previously, but I've been looking for a few days and can't find them again!

Any assitance would be very much appreciated. I'd prefer to be e-mailed if possible, thanks.

Charles Oldham

There are a couple of ways to do this either using a piece of external hardware to convert the audio to data for display on screen or using the mic input on your Mac, if it has one.

If you are using a Mac with a mic input then have a look at a piece of shareware called RadFax. Quite simply you feed audio from your HF receiver into the mic input on your Mac and RadFax will display the incoming WEFAX picture. Have a look at ftp.demon.co.uk /pub/ham/mac.

If you Mac has no mic input then you will need some form of external decoder most of the popular ham data TNCs are capable of this, PK232, KAM + etc etc. Most of the major TNCs also have controller software which will run on the Mac, in the case of the PK232 it's called MacRatt II and with the KAM it's HostMaster. Both will allow you to display received WEFAX images. As these are commerical packages you'll need to get your local dealer to order it.

Hope this helps,

Sean.

Dear Jim, et al

I work the high orbit birds (Oscar 10 and AO-13) exclusively. For my 70cm uplink I use fifty watts into a single, horizontally polarized yagi. It's from Rutland Arrays, is 14 feet long and (if I remember correctly) has 28 elements. Several operators have commented to me on how good my signal sounded. I also use Aircom Plus cable and the special N-connectors which I get from SSB Electronics. I am NOT affilitated with either of these two companies, but I must say my experience with thier products has been good. It IS possible to work the high orbit birds using linear polarization.

On the 2 meter downlink I use 2 8-element yagis (again Rutland Arrays) which I have phased for RHCP. I found that using only one 8-element yagi with a good mast-mounted preamp allowed me to work AO-13 with some difficulty, but I was unable to hear anything but the beacon on Oscar 10. Using 2 yagis phased for RHCP allows me to work both AO-13 and Oscar 10 and gives a more-than-adequate downlink. I suppose if one were _always_ on the birds that there would be a time when the ability to switch to LHCP would come in handy, but I do not believe that to be the case very often. Perhaps someone who has actually used LHCP on the downlink can elucidate as to just how often they have used it. Hope this hasn't confused you even further.

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

During summer 1996, the Florida EXPLORES! program will be offering for the first time part of its groundstation training course via the WWW and other electronic avenues, for credit at FSU. Operators (or operators soon-to-be) of weather satellite groundstations who are interested in taking this class may view the course syllabus at

http://www.met.fsu.edu/explores/summercourse96.html

Paul Ruscher
FSU Meteorology
ruscher@met.fsu.edu

PS - This course is designed primarily for educators who use the course in their teaching at the K-12 or College/University level.

More information on Florida EXPLORES! may be found at
http://www.met.fsu.edu/explores/explores.html

>

I think I remember that email... :)

FYI: TDRS1 just came visible to the pole in the past couple of months.
Though it's not being used yet at Amundsen-Scott Station (90 South),
NASA is planning on some experiments with the bird from there in the
next couple of years. The plan is to use it for uni-directional high
bandwidth (100+ MBPS) data transfers from the Pole to the States. The
astronomers at the Pole generate HEAPS of data that needs to get back
to the states in near real-time. It almost seems silly that at a place
where there are usually only 25 people, they can saturate a 100 MBPS
link...

I would recommend TrakSat for DOS (although it will run in a DOS window)
It is a simple program with only the basic graphic displays but I find
it useful

It can be found at:

ftp://ftp.amsat.org/amsat/software/PC/tracking/trak310.zip

367. Information on equipment sought by new Tech

Newsgroup: rec.radio.amateur.space
Date: 1996-02-16 00:00:00 UTC
From: tomz@premier1.net
Message-ID: <DMuJuB.GLH@data-io.com>
Source record: 22934
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

Hi,
I am going to be taking my Tech tests on Saturday (2/17) and am now starting to look in to what type of radios to get. I plan to put a 2M Mobile in my truck and get a more substantial base for home.

For home I'm looking into Base Multiband / Multimode Transceivers and trying to decide what will be my best bet. I was thinking of one that would cover at least 2M and perhaps 70cm. I am interested in working into Satellite and EME as well as FM and perhaps some local CW, 12V operation would be a plus but not a major requirement. I do plan on upgrading to at least General with in the next year and expanding also into some HF as well. So I would want to take that into consideration as well. possibly using Transverters get to the higher freqs for satellite and EME and going with a more basic UHF/VHF base unit.

For the mobile unit I was thinking of a rather simple 2M unit for repeater and simplex FM. I live in a rather remote area in the western foothills of the Cascades so I think one of the higher output power units would be in order. I was considering picking up one of the new Radio Shack units. As far as I can tell it has most everything I am looking for at a reasonable price. From the cross talk I have seen on the net and the write up in CQ (VHF) it seems to be a good choice.

I would like to take advantage of the wealth of experience of those out here on the net and get some input from you as to what you think. Suggestions on equipment to get or avoid as well as things to look for or useless features to not even consider. For me price, value and reliability are important, I have a modest but hopefully adequate amount set aside for starting up and want to use it wisely. The Base unit I'll be looking for used at up coming Ham fests so any information about current or older equipment would be helpful. I was thinking of picking up the Mobil new (if it is in or around the same price range as the Radio Shack unit) but am vary open to suggestions. I would also welcome comment on other accessory gear that you feel would be useful as well as thoughts on band selection (pros and cons of the diffrent amature bands) or what ever info. you would like to pass on to a newbie like myself. I know there are lots of books and other sources around and would not mind pointers to the better source like that, but I am primarily looking for personal insights and experience.

Thanks
TZ

Screw talking to "Gawd"! Any such worth its salt doesn't need same!
But now hold on before you dismiss the idea of broadcasting to aliens!
For all we know they communicate intersystem on giant narrow lasers
anyway! Maybe they use neutrino interference, or some such, between
each other, but maybe some of them are always listening for signs of
INTELLIGENT life. Maybe they see totally MORONIC crap coming at them
from all over periodically, from races for the short time with radio

and TV before those races learn not to pollute and get fiber optics!!
Maybe we will hear something as soon as our pollution gets out, and
maybe it will be a warning to shut up or ELSE! While we are waiting for
THAT, though, perhaps they are listening to see what we're saying,
dumping "I Love Lucy" to /dev/null, or their equivalent, and even
listening for any POSSIBLY sterling CONTENT to justify bothering to
answer back! And it IS QUITE easy to get out with even a backyard
dish and a transmitter to spherical angles of space that might contain
such listeners if you use the right FM bands, such as that of TV and
radio audio. And if you are smart enough to send the right and well
crafted message, yours MIGHT be the message that might get them sending
narrow maser at us in response, given a few decades or centuries of
travel!! You might be famous after you're dead! :-) Heartwarming,
isn't it?! It is dumb, but quite possible that if SETI finds any
number of signals from other worlds, that they may be dumb broadcasts
that are as assinine and puzzling to another species as ours have
been!! ;-> Might be amusing to find some race sending us back early FM
junk just to tell us they heard us, and it might be a stupid kid show
from the fifties!! And we'd think it was Nik at Night bleeding in and
change the channel to get rid of the "distortion from earth-based
sources"!!! Dumb, really dumb!!

369. NOAA APT

Newsgroup: rec.radio.amateur.space
Date: 1996-02-16 00:00:00 UTC
From: nigel@ndavison.demon.co.uk
Message-ID: <824470654.3535@ndavison.demon.co.uk>
Source record: 22936

Hi,

Could somebody please tell me what APT stands for, and also supply me with some info regarding the content of an NOAA APT signal, ie frequency content, and minimum audio bandwidth required for acceptable results.

I know that I need 35 Khz IF BW but as we are all aware, common scanners do not have this feature. All I can do is use WFM and use a sound program so filter out the wanted and exclude the not wanted.

Any help would be appreciated.

Regards

Nigel Davison

I think APT=Advanced Picture Technology. I will check Dr.Taggerts
WX sat hand book. This is a GOOD book to get, try the ARRL website,
their bookstore has it.
I used a Pro2004 scanner in the wide fm (75KHz) mode. While it was too
wide, it worked. I started out with the scanner, a radio shack diskcone,
and and an older JFET preamp(located at the scanner no less). It gave
surprizingly good results for everything being done wrong.
I now use a crossed dipole, over a set of reflecting dipoles, with the
JFET preamp mounted at the antenna, good qualilty (RG-214) coax, and
the pro2004 with an out board if strip(to get the 35-40KHZ bw), a A&A
NOAA APT demode feeding the parallel port on a 486. I use JVFAX 7.0 to
capture and display the image.
Check out JVFAX 7.0, there is a real simple uA741 opamp based HF fax
demod. There is also a simple single ic front end that will convert
NOAA apt to a signal that the hf fax demod can "Read". While not as
good as a real NOAA apt demod, it does work fairly well.
Good luck!

Apart from InstantTrack, which is sold to benefit the AMSAT satellite
programs, my favorite is STSPLUS. It's DOS-based, and a thing of beauty.
It even has detailed Doppler information InstantTrack lacks, and many
different map views.

For Windows, WINORBIT is also good. Both can be found at

Web: http://www.amsat.org/amsat/AmsatHome.html
(find "downloadable software")

372. GEO Orbital Locations of US SIGINT Satellites [check them out!!]

Newsgroup: rec.radio.amateur.space
Date: 1996-02-16 00:00:00 UTC
From: John Pike <johnpike@fas.org>
Message-ID: <4g0j67$pe0@clarknet.clark.net>
Source record: 22939
Cross-posted to: sci.space.policy,sci.astro.amateur,alt.politics.org.cia,alt.politics.org.nsa,rec.radio.amateur.space

At the 1995 World Radio Conference, the US registered the following satellites as operating in the 17.8-21.2 GHz downlink and 30-31 GHz uplink bands.

station longitude

US CSID-A1 E 000
US CSID-A2 E 044
US CSID-A3 E 075
US CSID-A4 E 082
US CSID-A5 E 092
US CSID-A6 E 110
US CSID-E1 W 010
US CSID-E2 W 013
US CSID-E3 W 024
US CSID-E4 W 030
US CSID-W1 W 141
US CSID-W2 W 144

The US also registered

US CSID-P non-GSO [63 degrees, 39400-1000 km, 8 satellites]

[source: WRC-95 Document 235(Rev.2)-E 14 November 1995]

It is to be expected that geostationary SIGINT [VORTEX, MAGNUM, etc] birds will be found occupying some [but perhaps not all] of the registered orbital locations, and that the HEO registrations cover JUMPSEAT/TRUMPET spacecraft.

These systems have been operating at these locations since the 1970s, and their spectrum/orbit allocations were grandfathered to protect them from potential interferrence from new KA-band applicants, such as Teledesic.

These systems are associated with two ground stations, one in the Washington area, and the other at Castle Rock near Denver. These ground stations have a 200 dbi gain.

Hi Paul,

I would recommend LogSat. It is a Windows program, includes support for
the KCT Tracker/Tuner if you need it, and also includes a logging module
and an antenna design module. Great program that is highly supported by
the author. You can find it at:

I've sent a card for them about 1 year and a half, with the IRC's and
evthng, but they didn't replyed yet. (I lost the address :( )

I'm curious. What is a standard Hiking ELT and what frequency does it
operate on.

376. Wich DX and CallBooks are copatible whit Kansas City Tracker ?

Newsgroup: rec.radio.amateur.space

The Radio Shack mobile is Ok, but wait for it to go on sale. There are
many other 2 meter radios that will also fit your needs. The used market
will offer you the best value. For example, the IC-28H was one of the first
"high power" compact 2 meter mobile rigs, and it is available used at
attractive prices. However, you might want to think twice about other
miniature mobile rigs if you need high power. While the IC-28H had adequate
heatsinking for extended high power operation, many of the other rigs do not.
An alternative is a lower power radio and a brick amplifier. You can find
tons of 10 watt class 2 meter radios on the used market cheap, and a brick
isn't too expensive. That can give you 160 watts.

You've also got to consider environmental factors. If temperature
extremes and rough off-road driving are factors, you need a radio

that will hold up under those conditions. Yaesu has some "milspec" radios that might meet the need. They're a bit larger than the current crop of tiny radios, but still small enough to be practical for mounting in a truck.

Also, don't forget a high performance, and rugged, antenna. Antenna gain works both ways, transmit and receive, so it is more valuable than just a high output radio. A NMO mounted Larsen 5/8ths wave antenna may be just the thing to put on top of the truck. If you travel into the outback regularly, a collapsable yagi and a push up pole might ride in the truck for those times when a bit more gain and height would make the difference (obviously for use when you're stopped). Good coax is a must, don't throw away your power in cheap coax.

For the base rig, your choices are quite a bit more limited. For a 2 meter only multimode, the IC-275H is the unquestioned champ. But for satellite, the tried and true FT-736R 2m/70cm *duplex* radio remains the favorite of satellite operators. Beware of the Kenwood TS-790A, it has problems for satellite use, and a bad thermal design and poor user interface to boot. The IC-820H is a bit quirky for satellite use, and the IC-970 is too expensive for your budget.

An option for the soon to be General is the new IC-706. It is both HF and 2 meters. That still leaves you looking for 70 cm equipment for satellite operation, however. And while the radio is nice (very nice), it isn't completely top of the line in terms of raw receiver performance. If you're thinking of HF mobile, however, and need a radio to do dual duty, it is a very attractive and cost effective option. It is 100 watts on HF and 6 meters, and 10 watts on 2 meters. So use of a brick to bring the 2 meter side up to 160 watts would make a potent mobile or base combination for HF through 2 meters all mode. (If I could have only one radio, I think this would be it.)

HF only radios and transverters are an option, but beware, there are several potential gotchas here. First, the number of suitable transverters is limited, and the number of HF rigs that work well with transverters is limited too. The SSB Electronics transverters are about the only commercial choice. They're very good, but also expensive. Second, you need to listen at the same time that you transmit for satellite operation, and that means two transverters and *two HF radios* because most (if not all) HF radios won't operate full duplex. Of course, one of the HF rigs can be only a receiver, but it needs to be a good one, and there are few of those on the market today.

You could pair a two meter all mode with a HF rig and 70cm transverter. That would work all right for satellite, but now you have 3 boxes to deal with, and a fair hunk of change invested. Or you could use a 70cm all mode, like the excellent

IC-475H, and a 2 meter all mode like the IC-275H (makes a *wonderful* Mode B station), but now you don't have HF, and the pair costs quite a bit more than a FT-736R.

The 2 meter rig *could* be the IC-706, however, paired with an IC-475H for 70cm, and then you'd have HF too. That's an interesting combination.

Again, I'd advise that there are tons of used rigs out there. You *can* find excellent buys on used HF equipment, such as the fine IC-735, and many many choices for FM VHF/UHF rigs. Where things get a bit tight are in the multimode VHF/UHF market and the transverter market. There have been many fewer of those sold, and some aren't very good, so you might have a hard time finding what you need on the used market.

And finally, you can *build*. That's not as popular as it once was, but thanks to high integration parts, and some excellent designs, you can build credible equipment for VHF/UHF FM or SSB, and even for HF. VHF FM rigs are almost trivial to build today, and thanks to Rick Campbell (and the new DDS chips), single band SSB rigs up through 70cm are also a snap. A multiband HF rig could be daunting, however, due to all the required filters and switching.

The real drawback to building is packaging. Making something homebrew look nice and be easy to operate is still not trivial. However, microprocessors can take much of the pain out of the user interface, and Ten-Tec sells some nice cabinets. This probably isn't the right approach for a new ham though. You do need some skills besides being able to solder to successfully build a quality rig from scratch.

You can basically forget kits, most of them offer less performance, and higher cost, than commercially built equipment (especially if bought used) and teach you little other than how to follow directions and solder. Some kits can be used as *subassemblies* however, such as the Kanga kits of Campbell's designs, the Down East Microwave kits, and some of Ten-Tec's kit offerings such as their 6 meter transverter (you can't buy a 6 meter transverter for what Ten-Tec gets for their kit). FAR Circuits also performs a real service by offering boards for popular circuits at low cost. This takes a lot of the pain out of building, though if you use SMD parts, making your own boards isn't hard. Accurately registering all those through holes is what makes PC board fabrication difficult for the home builder.

Gary

378. NORAD Two-Line Orbital Element Sets (TLE757)

Newsgroup: rec.radio.amateur.space
Date: 1996-02-17 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4g4qko$8p5@blackbird.afit.af.mil>
Source record: 22945

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Note: The Celestial BBS will cease operations around mid-March 1996. It will be replaced before then with a new WWW site for distributing the current selection of data and software. Data will continue to be available via anonymous ftp at archive.afit.af.mil.

>
>Could somebody please tell me what APT stands for, and also supply me
>with some info regarding the content of an NOAA APT signal, ie
>frequency content, and minimum audio bandwidth required for acceptable
>results.

APT stands for Automatic Picture Transmission. The signal is a 2400 Hz tone varied in amplitude to convey the luminance information of the picture. White level is 100% amplitude, black is 4% amplitude. The picture format is 120 lpm progressive scan. This signal is FM modulated with 15 kHz deviation (30 kHz channel). So the *audio* bandwidth of the receiver can be sharply restricted to just 2400 Hz, but the *IF* bandwidth needs to be about 35 kHz (allowing some slop for doppler).

>I know that I need 35 Khz IF BW but as we are all aware, common
>scanners do not have this feature. All I can do is use WFM and use a
>sound program so filter out the wanted and exclude the not wanted.

Murata makes suitable IF filters, DigiKey handles them. WBFM uses a 200 kHz filter, and the resulting SNR will be poor. For best results, you need to sacrifice either the NBFM or WBFM position on your scanner and replace its filter with the proper bandwidth filter. It is critically important that the IF limit the FM signal, otherwise incidental AM modulation will be introduced and picture quality will be severely degraded.

381. EME? help!?

Newsgroup: rec.radio.amateur.space
Date: 1996-02-17 00:00:00 UTC
From: c002@Lehigh.EDU
Message-ID: <4g5c8a$10h0@ns2-1.CC.Lehigh.EDU>
Source record: 22948

HEllllo out there in EME land!
i now have set up a semi-el-az rotor system, with one 11 element yagi
in a backissue of QST, (the one with the pic of a 7m EME dish mising a segment
or 2 with the guy working on it) said that i will be able to do EME with that
and at least 170W, due to the megastations
i have not heard anything for Feb 17. in the caption with the pic, said there
was EME the 17th and 18th
is it me, or is there no stations out there saturday?
or could it be the sun, which is only 10deg. above it?

thanks

david

>confused you even further.

The real reason to use CP is to reduce *spin modulation* of the signal. When the satellite antennas are off-pointed from your location, this can become quite pronounced when using linear polarized antennas. The reason you may need to use LHCP is when the satellite is grossly off-pointed from your location the polarization sense effectively reverses, IE when the Bahn attitude is greater than 90 degrees off your location.

I use the KLM-40CX and KLM-22C for mode B operations. I rarely need more than 10 watts uplink power to match the beacon in strength (that's the maximum signal you should put to the birds) when off-pointing is not gross. When off-pointing is gross,

switching to LHCP allows me to continue to work the satellite
when use of the full 100 watts uplink power my station is
capable of generating won't do the trick using RHCP.

Use of linear antennas costs more than 3 db when the satellite
antennas are even slightly off pointed from your location.
The spin modulation (caused by cross polarization) can cause
fades much greater than 3 db, up to 30 db in some pathological
cases. This pogoing of signal strength can make you uncopyable.
Using the correct CP sense can almost eliminate the effects
of spin modulation.

Spin modulation is much worse on Oscar 10 than on Oscar 13
because Oscar 10's arrays were damaged post-separation when
the booster ran into it. That means that even when you are
on its boresight there will still be a spin modulation
component to the signal.

I used to use pairs of Cushcraft long boomers stacked for
linear polarization on Oscar 10. It was horrid. At signal
peaks, it was strong, but at signal dips it was nearly gone.
I had to run 100 watts to be copyable during the dips, which
made me stronger than the beacon during the peaks (not a
good thing). Switching to CP eliminated virtually all of
that and allowed me to reduce uplink power to a socially
acceptable level.

383. ICOM Radio control via comport

Newsgroup: rec.radio.amateur.space
Date: 1996-02-20 00:00:00 UTC
From: Danie Brynard <bryd@kidd.co.za>
Message-ID: <4gbod1$har@igw01.kidd.co.za>
Source record: 22950

Is there a software package available that will tune an ICOM CI-V via the standard PC com ports or parallel ports ? (thus without having to put additional h/w into the PC like a KCT card etc)

danie zs6awk
BRYD@KIDD.CO.ZA

384. HELP! sat. how?

Newsgroup: rec.radio.amateur.space
Date: 1996-02-20 00:00:00 UTC
From: gearloos@gnn.com
Message-ID: <4gc786$lof@news-e2a.gnn.com>
Source record: 22951

Hi and Thank You for reading this.
I have a Yeasu 736 with 144, 220, 440 installed
and I have adjusted the alc to give me a total 37 watts out on 2
meters and modified it for 9600 packet operation, Which I have
tested and seems to work ok.
A Cushcraft boomer 13 element,15.8db.gain anttenna
A Kantronics 9612 and kantronics kpc-3 packet controllers.
All this is fed through 50 feet of 9913 belden and a struthers
wattmeter which is on a piece of 9913 3 ft long from the radio.
The antenna is up 10 feet above the roof of a 20 ft tall building
for a total of about 30 ft.
How do I recieve/or transmit to any sats.voice or data.
what freqs...do I need some software...I have heard of Keps...but
how do I use them?
I am in the Los Angeles area....Sorry but I am really lost!!!
Thank You Again for any help.
73...de...ke6ott

385. DOVE activity increases

Newsgroup: rec.radio.amateur.space
Date: 1996-02-20 00:00:00 UTC
From: Robert D Houghton <rhought@cello.gina.calstate.edu>
Message-ID: <4gcji0$i02@cello.gina.calstate.edu>

What does the logging module do? Does it collect telemetry?

Thanks,

Bob KC6LVG

Do two things:

1. Go to your nearest han store and get a copy of The Satellite
Experimeters Handbook (or order from ARRL)

2. Visit and study the info on the AMSAT web page
http://www.amsat.org/amsat/AmsatHome.html

Have fun.

389. Increased activity from DOVE

Newsgroup: rec.radio.amateur.space
Date: 1996-02-20 00:00:00 UTC
From: rhough6007@aol.com
Message-ID: <4ge4fo$9fg@newsbf02.news.aol.com>
Source record: 22956
Body handling: HTML body converted to readable text

I have been monitoring DOVE for several weeks now and until yesterday I would only receive short MBLCTL frames on each pass. (It is my understanding that this is some sort of diagnostic mode that sends binary data.)

Yesterday, these MBLCTL frames became much more "verbose" with long strings every few seconds. Below is a sample of what I saw yesterday. Times are Pacific Standard Time (UTC -8).

```

SB NEWS @ AMSAT $SPC0219
* SpaceNews 19-Feb-96 *

BID: $SPC0219

=========
SpaceNews
=========

MONDAY FEBRUARY 19, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* CHINESE LAUNCH FAILS *
========================
A Chinese "Long March 3B" rocket crashed during launch on 14-Feb-96
destroying an Intelsat VII A2 (TVRO) communications satellite, according
to industry sources. The Long March rocket just barely cleared the tower
before it started veering sideways, and then crashed to the earth. At that
point the uplink was immediately cut. It is not clear whether the drop of
the uplink was caused by interruption of power or the censor's finger on
"the button".

[Info via Gary Bourgois, WB8EOH]

* W0CY - SILENT KEY *
====================
Another sad note. Jim McKim, W0CY, became a Silent Key 14-Feb-96. Jim
was born in 1915 and first licensed in 1933. He had been involved in
satellites since the launch of Sputnik I in 1957. A Life Member of AMSAT,
with a Life Membership Number of 7, as well as a life member of ARRL and
QCWA, Jim was known as "Mr. Ham Radio" all over central Kansas. W0CY was
an ardent supporter of AMSAT. Among his activities for the organization
was his stewardship of the of the Mid-America Section of the 75 Meter AMSAT
Net since its inception in the 1970's.

Jim McKim was also active in the Central States VHF Society and was an avid
VHF'er. He was especially fond of the six meter band. His first love was
CW and he was still able to copy it to the end.

The heating and air conditioning business, which he headed, designed and installed the systems in the Eisenhower Library and Museum complex in Abilene, KS. Jim had also been an amateur radio equipment dealer in Salina, Kansas. His satellite activities were featured in the December 1986/January 1987 issue of Smithsonian Air & Space magazine in an article entitled: "Homebuilt Satellites." This article, by Nancy Shute, captures the essence of Jim's activity on satellites and the AMSAT 75 Meter Net. He was also featured in an article by Jim White WD0E in the May/June 1994 issue of the AMSAT Journal. W0CY's booming voice will be missed by all on the 75 Meter AMSAT Net and the bands above 50 MHz.

[Info via the AMSAT News Service]

* MIR NEWS *
============
Yuriy Gidzenko and Thomas Reiter carried out a 3 hour, 2 minute spacewalk on 08-Feb-96, starting around 1307 UTC from the Kvant-2 airlock. The walk was reportedly shorter than planned due to a pressurization problem in the suit of EO-20 mission commander Gidzenko. The Cosmonauts recovered some samples which had been exposed to space on the exterior of the Spektr module (the ESEF or European Space Exposure Facility) to study the effects of radiation, vacuum and debris impacts. Launch of the EO-21 crew, Yuriy Ivanovich Onufrienko and Yuriy Vladimirovich Usachyov (callsign Skif-1 and Skif-2) will take place on 21-Feb-96.

[Info via Jonathan's Space Report #275]

* STS-75 LAUNCH *
=================
Just a reminder that space shuttle "Columbia" is scheduled for launch this week on 22-Feb-96.

* RS-12 NEWS *
==============
RS-12's recent switch to "Mode KT" allows its 2-meter downlink to be received and relayed through any satellite with an uplink passband within RS-12's VHF downlink passband. Such satellites include RS-10 operating in "Mode A", and FO-20, operating in "Mode JA". Careful planning can yield some interesting "dual-hop" contacts when these satellites are properly aligned in orbit.

392. Radio Database Program LW, MW, SW coverage for YOU.....

Newsgroup: rec.radio.amateur.space
Date: 1996-02-21 00:00:00 UTC
From: Charles Bolland <chuck@mail.flinet.com>
Message-ID: <4gduns$sio@news.flinet.com>
Source record: 22959
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.noncomm,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

FRIENDS,

If you would like a free copy of a radio database program that covers longwave, mediumwave, and shortwave with at least 4,000 of records, send your NAME, POSTAL ADDRESS, and EMAIL address to chuck@flinet, and I will return the program to you via EMAIL.

The program is not up to date! It is a program used during 1994 and hasn't be updated since. However, many of the records are still current for stations that do not change every quarter.

The program is good until June 6, 1996. After that it will not function.

Hope to hear from you and don't forget your Postal Address for registration and future information via mail..

All addresses will be kept confidential!

Chuck

>communication?
>
>-Thomas
>
I would like to point out that quite a few hams do eme communication all the time. I live about 1.5miles from Bill Maxim(N4AR?) and he does (or did) eme on 2mtrs. When he fires up(mostly cw) for eme operations, I just turn my radios off. There are articals in most of the ARRL yearly handbooks showing how to do it. Power bdgets, tranmitter/receiver requirments, and most important, antenna requirements. The nice thing about eme is that you can reach anyone who can see the moon at the same time you do(assuming you both have tied up a fortune in radio gear and land for the antenna's<g>).

>
> -Thomas
>

As far as I knew hams have done plenty of EME. You just need A LOT of
power and a large antenna array. If you take a look at the 2 Meter band you
will see that 144.0-144.05 is set aside for EME CW. And 144.10 to 144.20 is
for EME and SSB.

That's strange. I get the opposite feeling working the digital satellites (UO-22, KO-23, KO-25). When the satellite is over the East coast, the queue is usually full, while over the West coast, the queue is often nearly empty.

Which satellites do you refer to? On what do you base your data.

BTW, I get the same feeling with FO-20.

400. Radio Propagation & Space Weather Forecasting Course

Newsgroup: rec.radio.amateur.space
Date: 1996-02-22 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <4gh7c5$e19@holly.cc.uleth.ca>
Source record: 22869
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.amateur.space

NOTICE: There are still lots of seats available for the Internet Space Weather and Radio Propagation Forecasting Course, scheduled to begin on 18 March. An enrollment form is included at the end of this announcement for those who want to enroll. Enrollment forms must be postal mailed by interested participants no later than 04 March to be accepted.

CORRECTION TO PREVIOUS ANNOUNCEMENT:

We would like to correct a mistake in our previous posted announcement that stated that no more than 60 people will be accepted for this course. We WILL accept more than 60 people for the course. If more than 60 enrollment forms are received, everyone who enrolls will be accepted. But we will stop actively advertising the course and will discourage investigators from enrolling to take this course after 60 people have enrolled.

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE ANNOUNCEMENT

The response to our questionaire has been sufficient to justify going ahead with the Internet Space Weather and Radio Propagation Forecasting Course. People with almost any type of computer system will be able to take this course (see below).

Course Start-Date

The course is scheduled to begin on 18 March 1996. Persons interested in enrolling in this course MUST SEND US THE APPROPRIATE ENROLLMENT FORM AND PAYMENT FOR THE COURSE NO LATER THAN 04 MARCH 1996 TO BE ACCEPTED. That is, the enrollment forms must be postmarked no later than 04 March. This is required so that we have time to receive the enrollments and to distribute all required computer software and make certain everyone is ready to receive the course material before the course start-date. A printable enrollment form with mailing instructions has been appended below.

Course Prerequisites

There are no prerequisites to take this course. If you are interested, sign and send the enrollment form. This course will not be a difficult one for most people to handle. It will be visually-oriented with minimal math involved and will gradually increase in detail and complexity, building on the framework previously taught and established.

By the time the course is completed, everyone who takes the course should be able to forecast space environment and radio propagation conditions with accuracies comparable to professional forecasters.

One-Time Course

There are currently no scheduled plans to offer this course again in the future, UNLESS there is sufficient interest in the Internet community to justify offerring it again.

So, if you are interested in taking this course, this is the time to sign up. Don't wait for the next opportunity, because there might not be one.

Course Curriculum Reading Software

The following FREE software will be required to take this course. This software is available for most computer platforms, including:

* DOS
* Windows (3.x / NT / 95)
* Macintosh
* SDK
* UNIX systems (HP, SGI, and Sun supported)

The software is the ADOBE ACROBAT READER. This software is free of charge and can be downloaded at your convenience via FTP or WWW from Adobe (ftp.adobe.com/pub/adobe/Acrobat or http://www.adobe.com) or via our FTP system at: solar.uleth.ca in the subdirectories of "pub/solar/Software/Acrobat". Our FTP system is now connected to the Internet using a high-speed T1 line, so those who may have had slow downloads previously should notice a significant improvement in transfer speeds.

The use of the Adobe Acrobat Reader software has several significant advantages over other delivery methods. These include:

* Ability to incorporate complete graphical figures and high-resolution images into the lesson material for high-quality visually-oriented lessons.
* WWW-style links to other sections of the lesson material, allowing cross-references or bookmarks to be included.
* Support for imbedded digital video movies (AVI, MOV, MPEG, etc) if we should choose to insert movies of solar flares, etc.
* Wide compatability amongst most available computer platforms.
* Lessons can include links to WWW sites if you have Internet WWW access (not a requirement for the course).
* Lessons can be printed out on paper for those who would rather take the course on paper.
* There are security features available that are attractive.
* Compression features to reduce the disk-space requirements and download times.

Available Optional Course Material

This course will make use of a number of different IBM or compatible software products (designed for MSDOS 3.3 or higher systems or Windows systems running in DOS mode). The available software which can be used as part of the course curriculum includes the following, which can be ordered as part of the course when filling out the Course Enrollment Form appended to this announcement. This software is optional and will not be required to successfully complete the course. But it will certainly provide greater hands-on experience:

1. SKYCOM PRO Version 2.0 Ionospheric Signal Analyst Software (normally sold for $110.00 to $135.00 USD).
2. Professional Dynamic Auroral Oval Simulator (normally sold for $100.00 USD).
3. BCAST Solar and Geophysical Database Manager (normally sold for $50.00 USD).
4. Extended Database containing sunpot numbers from the year 1818, solar flux values from the year 1947, and geomagnetic data from the year 1932 (normally sold for $50.00 USD).
5. IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Software (valued at $50.00 USD).

Also available as part of the course curriculum, intended to be indirectly used as tools for the course, are our subscribable E-Mail Internet Services FOR ONE YEAR that include:

1. Daily Summaries of Solar and Geophysical Data (including all of the critical solar indices, geomagnetic indices, and statistics on solar flares, sunspot numbers, solar flux values, proton and electron fluences, neutron monitor and PCA statistics, etc).
2. Daily Summaries of Ionospheric Data (including ionospheric data from observatories around the world).
3. Daily Summaries of Auroral Activity (summarizing auroral activity for the last 24 hours and giving forecasts for the next 3 days).
4. Weekly Solar Terrestrial Forecasts and Reviews (which include complete summaries of activity in graphical formats as well as 10-day forecasts of geomagnetic activity, HF propagation conditions, auroral activity and potential satellite anomalies.
5. All Alerts and Warnings (warnings and alerts for major solar flares, geomagnetic storms, proton and PCA events, satellite anomalies and auroral activity).

These additional optional materials are not required to take the course, but will help you in developing your forecasting skills during and after you have completed the course.

Number of "Seats" Available

(Notice that this couse will be conducted entirely through the Internet via FTP or WWW in the convenience of your home or office. It does not require that you fly out and physically attend a class. Those who are interested in the course but do not have Internet access may also

arrange to purchase the course on-disk. Contact us for pricing.)

Enrollment will be on a first-come first-served basis. Although 60 seats are officially available, we will accept anyone who enrolls even if the number of seats exceeds 60. We will, however, stop advertising this course after the 60th seat has been taken. If you are concerned about the speed of the postal system delivering your enrollment form, we can reserve a seat (or seats) for you if you send an e-mail message stating your intent to enroll in this course to: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu. Include an appropriate enrollment form in your message.

Method of Course Delivery

Lessons will be available for download via FTP or WWW on a weekly basis by all individuals taking the course. If you are away one week, the older material will remain on-line so you can catch up at your convenience. We now have a high-speed T1 line installed which has resulted in significantly faster FTP and WWW transfers. The transfer of course material using this method will therefore be more than adequate.

Course Assignments

There will be course assignments that can be completed and returned to us if desired. However, we are not going to enforce this. If you are too busy to complete course assignments, we certainly won't hold that against you. Whether you decide to work on the assignments or "hand them in" will be entirely up to you. The assignments are only intended to help hone your skills and test your knowledge.

We Will Help

If parts of the course are particularly difficult to grasp, send us e-mail and we will try to clarify and explain the concepts using e-mail correspondence.

Revised Course Outline

The current course outline follows below. The order of the material listed below may not necessarily be the order in which they appear in the course curriculum.

COURSE OUTLINE FOR THE
INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

Over 150 Topics Covered

Goal: To learn how to accurately forecast space weather and radio propagation conditions using information available on the Internet, through radio observations, and through studies using supplied computer software.

Upon completion of this course, each student should be able to formulate space-weather and radio propagation forecasts with accuracies comparable to professional forecasters.

Supplied: o SKYCOM PRO Version 2.0 HF Ionospheric Signal Analyst
o Professional Dynamic Auroral Oval Simulator
o BCAST Solar and Geophysical Database Manager
o IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Program
o Extended Database of sunspot numbers, solar flux and geomagnetic data.
o Subscription to All STD Solar and Geophysical E-Mail Products (including alerts and warnings) for one year.

Total Value of the Supplied Material: over $540.00USD

The following topics and subtopics are currently scheduled to be included as part of the course curriculum. There will probably be many other subtopics included that are not listed here.

o The Sun
* Basics of the Sun
* Sunspots
- Types of Sunspots
- Sunspot Magnetic Fields
* Solar Radiation and Radio Emissions
* Solar Cycles
* Techniques for Modelling Solar Cycles
* Sources of Information and Imagery

o Interplanetary Space
* The Solar Wind
* Magnetic Fields
* Heliospheric Current Sheet
* Solar Sector Structures

o The Earth
* Magnetosphere
- The quiet magnetosphere
- The disturbed magnetosphere
- Understanding and Deriving Magnetic Indices
K-Indices
A-Indices
Auroral Electrojet (AE) Index
DST Index
- Magnetic Storms
Sudden Storm Commencements (SSCs)
Gradual Storm Commencements
- Geomagnetically Induced Currents (GICs)
Effects on Electrical Hydro Systems
Effects on Other Long Conductors
* Ionosphere

- Formation of Ionospheric Layers
- Factors Affecting Ionospheric Layers

o Solar Disturbances
* Transient Solar Coronal Mass Ejections (CMEs)
- Types and Structures of Coronal Mass Ejections
- Understanding the Importance of CME Structures
- Inferring CME Structures from Available Solar Data
- Coronal Mass Ejection Detection Methods
- Using IMPACT (software) to Aid in CME Disturbance Predictions
- Solar Cycle Dependencies
* Solar Flares
- Basic Nature of Flares
- Types of Flares
- Flare Rating Systems
- Significance of Proton Flares
- Ground Level Events (GLEs)
- Fast Transit Events
- Interpreting Magnetograms
- Determining Magnetic Shear and Flare Susceptability
- Solar Flare (and Proton Flare) Prediction Techniques
- Solar Flare Related Coronal Mass Ejection Prediction Techniques
- Sources of Solar Flare Information
* Solar Coronal Holes
- Coronal Hole Basics
- Recurrence
- Solar Cycle Correlations
- Associations with Near-Relativistic Electrons
- Coronal Hole Related Disturbance Prediction Techniques
* Filament Eruptions
- Filaments and Prominences
- Eruptive and Non-Eruptive Activity
- Filament-Associated Coronal Mass Ejections
- Filament-Related Disturbance Prediction Techniques
* Possible Lunar Influences
- Interaction with the Geotail

o Auroral Activity
* Basic Theory of the Northern/Southern Lights
* Behavioral Characteristics of the Auroral Ovals
* Sensitivity to Solar Disturbances
* Affects on Satellite Health and Radio Communications
* Mathematical Models of the Auroral Zones
* Auroral Activity Prediction Techniques
* Information Sources

o Conditions Affecting Satellite Health
* Satellite Orbits
- Geosynchronous
- Sun synchronous
- Polar

- Properties of Lagrangian Orbital Points
* Atmospheric Drag
* Surface Charging Anomalies
* Deep Dialectric Charging Anomalies
* Interplanetary Shocks
* Magnetopause Crossings

o Postulated Sun/Earth Climate Connections
* Possible Long-Term Climatic Trends
- Rainfall
- Temperatures
- Atmospheric Pressure
- Storm Tracks
- Ozone Correlations
* Possible Short-Term Meteorological Trends
- Pressure and Winds
- Lightning
- Storm Systems
- Ozone Responses

o Radio Propagation
* Basic Theory (Non-Technical)
- Characteristics and Components of Radio Signals
- Understanding Plasmas
- Importance of Electron Collisions
- Appleton/Hartree Contributions
- Signal Polarization and Coupling
- Ionospheric Absorption
Deviative Absorption
Non-Deviative Absorption
- Fading
- Multipathing
- Travelling Ionospheric Disturbances
- Solar Related Disturbances
- Structure of the Ionosphere
Ionospheric Layers
Importance of Sporadic-E
Effects of Spread-F
Solar-Cycle Dependencies
Models of the Ionosphere
x Simple Mathematical Models
x Numerical Maps
x CCIR
x URSI
x The International Reference Ionosphere (IRI)
x Others
* Probing the Ionosphere
- Probing Techniques
- Probing Instruments
- Sources of Ionosonde Information
* Basic Ray-Tracing Concepts

- Ordinary vs Extraordinary Signals
- Becoming Familiar with Ray-Tracing Software
* Ray-Tracing in Three-Dimensions
- Ray-Tracing Software Considerations
- Preparing for 3D Ray-Tracings
- Performing 3D Ray-Tracings
- Studying 3D Ray-Tracing Results
* Vertical Radio Signal Propagation
- Signal Reflection Behavior
- Critical Frequencies
- Ray-Tracing Vertically-Incident Signals
* Oblique Radio Signal Propagation
- Signal Refraction/Reflection Characteristics
- Effects of Geomagnetic Activity
- Effects of Solar Activity
- Ray-Tracing Obliquely Incident Radio Signals
- Determination of Maximum Usable Frequencies
Simple Empirical Methods
Ray-Tracing Techniques
- Effects of Sporadic-E
- Non-Great-Circle (NGC) Propagation
Responsible Conditions
Compensation Methods
Ray-Tracing Techniques to Analyze NGC Propagation
- Chordal-Hop and Inter-Layer Ducting Propagation
Advantages and Disadvantages
Analysis using Ray-Tracing Techniques
Detailed Ducting Analyses
- Searching for and Exploiting Exotic Propagation Paths
Properties of Exotic Paths
x Auroral-Related Non-Great-Circle Propagation
Searching for Exotic Paths using 3D Ray-Tracing Techniques
Determining the Most Reliable Exotic Radio Paths
* Ionospheric Disturbances
- Solar Related Disturbances
Solar Flares and Related Coronal Mass Ejections
Coronal Holes and High Speed Solar Wind Streams
Filament Related Coronal Mass Ejections
Impact of Flare Related Radio Noise Bursts
- Short Wave Fadeouts
- Sudden Phase Anomalies
- Sudden Frequency Deviations
- Devastating Effects of Polar Cap Absorption
- Disturbances and their Effects on Satellite Communications
* Radio Propagation Prediction Methods
- Short-Term Forecasting Techniques
- Medium-Term Forecasting Techniques
- Long-Term Forecasting Techniques
- Sources of Forecasting Information

o Applied Forecasting Techniques
* Climatology
* Pattern Recognition
* Compiling Necessary Information
* Exploiting Databases
* Computer Related Aids
* Studying Real-Life Examples
* Developing Experience and "Intuition"

o Field Experience
* We present you with some specific historic real-life scenarios. Using the information and techniques studied in this course, you are asked to develop your own space-weather and radio-propagation predictions. The actual real-life impacts are then studied and compared with your forecasts.
* We present you with several hypothetical (possible future) examples and ask you to develop your own forecasts.

o Course Completed

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE
ENROLLMENT FORM

I am interested in taking the Internet Space Weather and Radio Propagation Forecasting Course, currently scheduled to begin March 18, 1996. I have filled out the necessary information below.

I AM INTERESTED IN TAKING THE FOLLOWING COURSE VARIANT:

[ ] - The Full Course without the accompanying computer software or subscribable e-mail services for $150.00USD.

[ ] - The Full Course WITH all accompanying computer software, but WITHOUT the STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $200.00 USD.

[ ] - The Full Course WITHOUT the accompanying computer software, but WITH all STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $200.00 USD.

[ ] - The Full Course WITH all accompanying computer software AND WITH the STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $250.00 USD.

CHOOSE ONE OF THE FOLLOWING:

[ ] - I need the computer software postal mailed to me on 3.5" high-density disks to the address written on the *REVERSE* side of this order form for an additional $40.00USD which includes shipping and handling.

[ ] - I expect the Solar Terrestrial Dispatch to notify me via e-mail of the Internet FTP and WWW procedures to obtain the computer software.

CHOOSE ONE OF THE FOLLOWING:

[ ] - Please inform me of the FTP/WWW procedures to obtain the FREE ADOBE ACROBAT READER software over the Internet, required to read the course material.

[ ] - Please ship me the ADOBE ACROBAT READER software on 3.5" HD disks (for IBM or compatible systems only) for an additional $10.00 USD.

TYPE OF COMPUTER AND OPERATING SYSTEM THAT WILL BE USED TO TAKE THIS COURSE:

_____

MY E-MAIL ADDRESS IS:_____

MY BACKUP E-MAIL ADDRESS IS: _____
(if available)

MY VOICE TELEPHONE NUMBER IS: _____

MY FAX TELEPHONE NUMBER IS: _____

TOTAL AMOUNT INCLUDED FOR ENROLLMENT, INCLUDING ANY ADDITIONAL AMOUNTS REQUESTED FOR SHIPPING SOFTWARE, ETC, IN UNITED STATES CURRENCY ONLY:

$_____._____ U.S. DOLLARS

I have remitted a check or money order (IN U.S. FUNDS) for the above amount to the "Solar Terrestrial Dispatch" at the following address:

Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0
Canada

FAX: 403-756-3008

I understand that course material (lessons) will be made available on a weekly basis for anonymous FTP and WWW from the Solar Terrestrial Dispatch and that I will be notified via e-mail of the FTP/WWW and other procedures required to obtain the lesson material and read it on my computer. I also understand that there will be no refunds for the course should I be dissatisfied with the course or the included software or services.

By signing below, I agree that I will not share copies of this course with any other individual(s) through any means without the expressed permission of the Solar Terrestrial Dispatch. FAILURE TO SIGN AND DATE THIS FORM WILL VOID YOUR ENROLLMENT APPLICATION.

Date: _____, Signed: _____

Please Print Your Signed Name Here: _____

+-+-+-+-+-+-+-+-+-+-+-+-> End of Enrollment Application <-+-+-+-+-+-+-+-+-+-+-+-+

403. 90's failed Pegasus launch

Newsgroup: rec.radio.amateur.space
Date: 1996-02-22 00:00:00 UTC
From: n2oto@aol.com
Message-ID: <4giavv$bfr@newsbf02.news.aol.com>
Source record: 22872

Hello all-

Back in the early 1990's there was a Pegasus launch of several military microsats that failed to achive orbit.

These microsats had a very short life and were of no use to the military.

The military gave permission to us hams to use these microsats.

Eventually the sats burnt up in the atmosphere.

Does anyone remember the names of these microsats and where I can find info on them?

Thanks,
Rupert E. Lubkemeier, N2OTO, FN30cr

Actually, they run on 121.5 Mhz and also 243.0 Mhz.

Some new types also run on 403 or 406 (can't remember)!

David,
I can only think that the hams out east might not have as much money to
spend on the hobby as the ones out west can.
Going by the price of the antennas, radio, amps, feedline and computer
Or else they are very quite about it...
Here in the KC area I know only a handfull of ops
there must be more but they are not talking..
We even had a Satellite net on one of the 2M repeaters
they talked mostly about the tvro stuff.. I was the only ham sat op that
checked in..
I even was able to gateway the repeater to the sat <AO-13> a couple of times
for them to get som dx check ins :->

Has anybody else noticed an instability in Meteor 3-5 since it was
turned on again (~2/20)? The clock appears to be off or something. If
you have time, dowload the attached gif of the 2/22 23:02 pass. I've
also notice an increase in the "banding" that's been discussed at
length on the wxsat mailer. I don't think there's a problem with my
system, as I still receive NOAA APT images with "straight edges."

Can anyone please tell me why so few hams are into satellites (AMSAT)
on the east coast compared to out in california,etc.???? Maybe I'm wrong, but
hardly anyone in my area (tidewater area of southeast Virginia) is into it!
-David. :(

>operate on.

well, this actually probably belongs in one of the aviation groups ...
however

Most aircraft in the U.S. are required to have Emergency Locator
Transmitters (ELTs). These are simple highly protected radios which
operate on 121.75 Mhz. The radios have a large amount of protection and
would be expected to survive most aircraft crashes. There's a switch
which is tripped by the shock of a very hard landing (euphemism for
crash). The carrier can be detected and tracked using normal radio
location techniques, but since they're VHF can only be heard within a
fairly short line-of-sight range.

Enter satellites. The U.S., Soviet Union (now Commonwealth of
Independent States), Canada, and France (did I forget anybody?) entered a
joint international rescue program - COPSA/SARASAT (SARASAT = Search and
Rescue Satellite COPAS is the Russian acronym) many years ago as a
cooperative effort. Other countries have expressed an interest and
joined after the organization was started.

U.S. NOAA weather satellites and Russian Cosmos navigation satellites
carry transponders which monitor this frequency. By listening to the
doppler shift the location of the ELT can be determined within about
50-100 miles where normal mobile radios in search and rescue teams can
zoom in on the signal.

In the early days there were plenty of unusual 'events' - rescue workers
ended up going to warehouses to find a unit which was accidentally
activated, aircraft with rough landings would have activated units, etc.

While the system was originally intended for aviators and mariners it has
been used for other applications. A race car driver in South Africa was
able to use one to call for help when he had an accident, and units are
available for hikers, and others who are separated from civilization and
might need emergency help.

Off-the-shelf units can be purchased from aircraft and marine dealers.
Haven't the faintest idea what they cost though. There are heavy fines
for using an ELT in the case of a non-emergency though - for obvious
reasons.

The expedition in the artic region which used an ELT combined with the amateur UO-11 spacecraft (there - finally got this message back to amateur spacecraft) was just one unusual application.

From: Ken Keyseear <keyseear@radix.net>
Message-ID: <4gjabu$7cc@news1.radix.net>
Source record: 22878

Slightly off topic, but I know this is where my fellow IC-820H owners are likely to hang out!

Can anyone send me or point me to the mod for the IC-820H that opens up the receiver PLL to 136-174? I saw a UK ham's review of the 820 awhile back that referred to this mod...

Thanks!

>Track or WISP ?

ICOM radio's are controlled via a serial port. Use a MAX-232 to convert
the RS232 levels to TTL. Just connect the IN and OUT (TTL side) together
and to the ICOM port.

For the rotators, it depends on your make&model.
You could build the AMSAT-DL tracker and control it from a parallel port.
It is also possible to use the control lines of a serial port for that;
for a while I used the RTS/DTR lines to control the rotators via an
AMSAT-DL interface, and used RXD/TXD of the same port to control the radios.

Hello Alan-

These military microsats were real. I believe they belonged to the Navy.

If I remember correctly, there were four. They were called something what sounds like 'litesats'.

The sats were short lived. 1,2,3 weeks or so.

The DOD told AMSAT that if there were any Hams that could transmit into the sats, they were welcome to play with them.

They were not retuned to ham bands, but operated at 350 Mhz!

I remember getting the Kep elements from the AMSATnet on 80m.

To my memory, no one used the sats, so they burned up virgins.

-Rupert, N2OTO
>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>
>>>> Never heard of them.

How did they re-tune them to amateur bands? Why would the military have made their (probably secret) capabilities available to amateurs?

Sounds more like the microsats that were launched starting around then with mostly amateur radio packages aboard. These were mostly educational satellites, and most (if not all) are still up.

There are still some being built for future missions.

Alan

414. Re: bincancel:5 large binaries:AR164:@@NCM

Newsgroup: rec.radio.amateur.space
Date: 1996-02-23 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-164.a@redpoll.mrfs.oh.us>
Source record: 22881
Cross-posted to: alt.retromod,comp.os.os2.utilities,rec.games.video.sega,rec.radio.amateur.space

Binary posts do not belong in unmoderated discussion groups.

I run a program that searchs for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierachies.

I have issued 5 cancels for large binary files (average size 586,827
characters - total size 2,934,136 characters) posted to 3 different
unmoderated discussion groups in the comp and rec hierarchies as
follows:
3 comp.os.os2.utilities
1 rec.radio.amateur.space
1 rec.games.video.sega

This pointer is being posted to each affected group listed above.

If you want to see exactly which file was deleted from a particular
group, or the criteria that I used to select it, read the full report
in news.admin.net-abuse.announce. Look for AR164 as in the
subject of this pointer. The full report can also be found in
alt.nocem.misc and alt.retromod.

There has been a long-standing consensus among news administrators that
binaries belong in binaries newsgroups, and not elsewhere. There also
seems to be a consensus supporting the cancellation of large binaries in
discussion groups as long as appropriate protocols are followed.

In my opinion, the best way to distribute binary files is via ftp or
the web. With the ready availablity of ftpmail servers, even uucp
sites can retrieve binaries from ftp sites.

However, if you really must post a binary to Usenet, please post it to
an appropriate binaries newsgroup such as alt.binaries.misc. Then, if
you like, post something in the appropriate discussion group telling
people where to find the binary in the binaries group (a pointer to
the binary). This will permit news administrators and users to decide
for themselves whether to receive the binary files.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. Thanks.

Best wishes,
Dick

Hello all,
I am preparing a club lecture on the EZSATS, and I would be
interested in the radios, antennas, software,etc. that you use
to work rs-12 (also rs-10 and rs-15).
I am working RS-12 from Arkansas. I have 13 states confirmed
since 31 Dec '95. I've had some good luck with an HW-8 qrp xmtr
(2.5 watts DC input).
Also if you need Ark on RS-12, I'll be glad to help.
Thanks in advance------------Bill N5XYN

Source record: 22886

COST, the ratio of $/per QSO!!!

I have been an amateur radio operator for 30+ years and now have setup a "modest" satellite station. In my 30 + years, I have had the big HF tower, KW, and fancy HF equipment, however setting up a satellite station was the most $$$$$$ which I have ever put into the hobby.

Its one thing to spend money, but for the amount which I have invested per the amount of QSOs I have made, its really not worth it for the average guy. HF or two meters is a much better return in investment. Im just lucky I have the extra $$$$$$ to do it!!!

Another factor is "HIGHER Technology!" Satellite operating is not a "plug-n-play" operation. Its getting there, but not yet. It takes someone who understands the technolog to pull it all together. This is what drove me to spend the $$$$$. I enjoy the higher technology.

Is it possibly that 'joe average' amateur doesn't have an understanding of what it takes to do it? If you look at some of the elaborate arrays shown and discussed in QST, etc. I think it moves joe away. I got into a form of it a couple of weeks ago. Just using a DOS based program that was on the QRZ CD-ROM to track MIR a 10 watt ICOM beater mobile rig and a 20 year old Ringo Ranger mounted at 14' I worked MIR.

The interesting part is that I like most guys, thought you needed all that super elaborate equipment to get started, just not true. One of our local guys worked MIR a couple of years ago with an HT while being 'John Deere mobile'. The guy was out plowing and gave it a shot, and was successful. So, locally (Northern Indiana) there are by proportion, quite a few folks doing it.

I think another point about 'feasibility' might me a reason. Although there are a lot of hams on the coasts, 'line of site communications might be a little tough if you have mountains, hills, skyscrapers, etc. in the way. I've found that 'contacts' with a low flyer like MIR are much more frequent when the 'bird' is 200 - 300 miles away, and travelling away from me. (I consider a 'R0MIR Busy' to my signal back as an acknowledgement that I've made contact. But we are 'flatlanners' around here, so we have a very wide horizon. Also, (this will draw some fire) 8,9, and 0 district hams seem to be a little more inventive. Scan through QST, the antenna compendiums, software programs and authors and you will find a very disproportionate numbers of 8's, 9's, and 0's. It might be the Midwest way of working with what you have, I don't know. Anyway, we do tend to experiment and not get too caught up in minor setbacks. My very humble opinion.

424. Re: 90's failed Pegasus launch

>I believe they were simply called Microsat - 1-7. Orbital Sciences built
the satellites as
well, and they presented a paper about the program at the AIAA/USU Small
Satellite Conference
(#6, held Sept. 1992)

As I recall, the military did conduct a few experiments with the
spacecraft before giving
up on them - they were used for communications relay as I recall.

If you can't find the proceedings or other papers about the spacecraft,
drop me an email
and I'll see if I can find it.

>Can you identify which specific objects these are?

0 - They are all classified signals intelligence satellites.

1 - No, I can't "identify which specific objects these are" -- this is the whole point of my posting -- I am hoping that some of the folks who have been doing optical tracking of GEO sats will take a peak at these locations and let us know what -- if anything -- they see.

2 - I will leave it as an exercise for others to try to get a handle on the extent to which there is a hazard of confusing these SIGINT birds with other vanilla satellites in similar orbits. However, I take it from the other thread on unidentied GEO sats that this is not too difficult, if one actually knows what one is doing.

3 - It is almost certainly the case that at least some of these locations are currently un-occupied, based on the precedent of MILSTAR, where they registered about twice as many slots as they had satellites.

4 - At least some of these satellites should be pretty readily visible, compared to other GEO objects. Apart from the two MILSTARs, some of these puppies are the largest objects in GEO -- about 5 metric tons or so, and the rest of them are not small, massing about half this.

As you are aware, Rainer Kracht has observed uncatalogued geosynchronous
satellites at 13 and 28 degrees west. Those locations correspond to US
CSID-E2 and possibly -E3 or -E4 in the above list. He thinks, based on
older filings, that the one at 28 west is a Chalet/Vortex SIGINT satellite.

Icom IC-970 9600 baud FSK Mods

The following describes mods for 9600 baud FSK for an Icom IC-970. The mods require NO soldering or cutting on the IC-970, and are thus easily reversible.

Icom suggested mods for 9600 were:
• TX mod input at collector of Q59 on the main unit.
• RX Main at DET output in J29 (main unit).
• RX Sub at TSAOS output in J9 (main unit).

I made slight mods to Icom's mods:
• TX mod input at collector of Q59 on the main unit. This is available at the top of R60 with a micro clip. Ground is at the top of R51 with a micro clip. These resistors are about 3" back from the front of the Main unit and 2" from the right. The micro clips were attached to a length of RG-174 mini coax. No mods to board! The leads of the resistors appear to be painted. Scrape the paint off with a small, sharp knife (a small mod).
• RX Main output at TSAOM at J29 (main unit). Available on P85 (tone squelch option socket) under the top cover.
• RX Sub output at TSAOS at J9 (main unit). Available on P87 (tone squelch option socket) under the top cover.

Two lengths of RG-174 mini coax were connected to a 6-pin headers with the center conductor on pin 3 and ground on pin 4. The headers were covered with heat-shrink tubing. The headers plug into P85 (MAIN) and P87 (SUB).

The three coax cables were routed to the back-right of the IC-970 case. The two TVJ hole covers were removed and replaced by two dual RCA jack boards. These boards were attached with a small bolt through the hole for the TVJ screws. The coax was attached to three of these jacks.

Despite the sarcastic replies, the Arecibo Radar running in EME mode has enough sensitivity to get earth-moon-earth-moon-earth echoes. So the answer is yes, with one extra hop!

I am not in ham radio but thought maybe someone out there could answer
a question for me.
I am an RF tech working in satellite communications.
Can someone give me a good definition of PROPOGATION...(propogation
delay, RF propogation or whatever)
We were having a discussion one day at work and cant agree on
it....Yes, I guess we got a liitle to much time on our hand.
Your definition would be greatly apreciated.
Please Email me if you can help.
Thanks in advance,

Mike

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Note: The Celestial BBS will cease operations around mid-March 1996. It will be replaced before then with a new WWW site for distributing the current selection of data and software. Data will continue to be available via anonymous ftp at archive.afit.af.mil.

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* MIR NEWS *
============
The following is a message from crews 20 and 21 aboard the Russian
spacestation Mir, dated 23-Feb-96:

Hello Folks!
Today, at 1720 Moscow time, our follow-up crew docked to the Mir-station.
We are now 5 onboard: 3 Juris, 1 Sergei and 1 Thomas. After finishing the
initial checks and procedures, we already have had some time to celebrate
their docking and, of course, to celebrate the imminent weekend.

Well, as we have mentioned before, this will be our (i.e. Juri's, Sergei's
and Thomas') last TGIF-message. But we certainly will introduce this habit
to the new crew.

We are looking forward to the next Friday, not only because we will be
together with our wifes, children and friends again, but also because we
will be able to take our famous TGIF-drinks in the old fashioned way in
gravity! However, for today we still would like to ask you to have a few
drinks for the five of us too (it might be a tough night ahead...).
Thanks a lot for all the TGIF drinks you took extra for Juri, Sergei
and myself during the last half year. We hope, no one of you became
addicted.

Many greetings, 73's
Juri, Juri, Juri, Sergei and Thomas.

* STS-75 NEWS *
==========
Two Italian astronauts are currently onboard the Space Shuttle Columbia in mission STS-75. They are Umberto Guidoni, 40 years of age from A.S.I., and Maurizio Cheli, 36 years of age from E.S.A. Both are involved in an Italian experiment that deploys a satellite from the Space Shuttle from a 20 km tether. The tether produces electrical energy as it sweep through the earth's magnetic flux lines while in orbit.

The tethered satellite is a product of Alenia Space in Italy.

[Info via IW2BSF]

* WEBERSAT NEWS *
==========
WEBERSAT (WO-18) is currently sending telemetry, photos, weekly whole orbit data (WOD), and light spectra of the Sun or Earth, on Mondays.

The satellite's digipeater continues in operation using an uplink on 145.900 MHz. Using a terminal program connected to your TNC/PSK modem, try connecting to yourself using the following TNC command:

cmd: c yourcall via weber-1

If you're successful, try a few CQs and see who is listening...Enjoy!

Photo 10/14 of Southern Chad is the current image. It has very good contrast with very few clouds and land features clearly visible. Use WW1.3 to convert the photo to a GIF image, then use your favorite graphics program to size it, and adjust the contrast and brightness slightly.

The satellite continues to have a weak and relatively steady tone of about 1200 Hz in the downlink signal, which can cause reception problems with some modems. If this problem occurs, a ground-based solution is to adjust the IF-shift of the receiver to suppress the carrier into the skirts of the IF filter. Night reception seems to be better than in the daytime.

WOD collection and broadcast will adhere to the following schedule:

17 February/Week1: Array currents, Ch# 26 27 28 29 2A 2B
24 February/Week2: User requested channels, Ch# ?? ?? ?? ?? ?? ??
3 March/Week3: BCR, 21 22 29 2F 33 36
10 March/Week4: Temperatures and impact detector, Ch# 14 2F 30 35 3B 40
17 March/Week1: Array currents, Ch# 26 27 28 29 2A 2B

Check your local BBS, an issue of SpaceNews, or AMSAT bulletin for the current status of your favorite satellite.

[Info via Tom Davis, IK3WVJ]

* DARC FUNDS PHASE IIID *
==========
In 1991, the Deutscher Amateur Radio Club (DARC) signed an agreement with AMSAT-DL in order to support the project Phase-3D with 150,000 DM per year

over a period of six years to a total sum of 900,000 DM. The DARC is the national German amateur radio organization within the IARU and represents nearly 60,000 German HAMs.

In the same year, the DARC General Assembly agreed to provide a major support to Phase-3D, which is beeing considered to be an important project for the entire Amateur Radio Service. This project demonstrates the state of the art of Amateur Radio as a means for technical development and self education. Additonally, Phase-3D will enforce the usage of the ham radio microwave bands, which are under high pressure from other services. These are the main reasons why the DARC General Assembly decided to support the Phase-3D Project with about $ 10 per member.

In recent years, it turned out that the decision to support Phase-3D was very wise because there are many threats against the Amateur Radio Service, and those threats extend beyond Europe. DARC welcomes other national IARU member societies to support AMSAT groups with donations for Phase-3D.

DARC's first payment was completed for the year 1990, and the last (sixth) for 1995 completed the total sum to 900,000 DM, which is approximately $600,000 US. DARC is proud that it could help to realize Phase-3D with this substantial contribution.

[Info via Norbert Notthoff, DF5DP (DARC Staff Satellites And Space Projects)]

* LUSAT GLITCH *
================
Chuck, W9ODI reports that there is a corrupt directory header on the LUSAT OSCAR-19 satellite. The header belongs to file 48CD, dated 24-Dec-95. Corrupt directory headers cause confusion to groundstation software, such as PB, WiSP, and SatLink. A solution to the problem is to delete the PFHDIR.HOL file and request a new LUSAT directory when accessing the satellite. Just remember not to request a directory that goes back to 1995, or you may pick up the bad header again.

[Info via W9ODI]

From: Darby G Cooper <dgcooper>
Message-ID: <4gv89l$mm3@news.iastate.edu>
Source record: 22910

There are several spacecraft programs that use the name
or could be called "picosats"

Orbital Sciences (OSC) has a formal spacecraft named
PicoSat that is designed to ride as a secondary payload
in the very tip of the Pegasus/Taurus nose cone. It is
offered as a commercial spacecraft available to anyone with
the money to buy it.

Arizona State University is constructing a very small
spacecraft (<10 lbs) that rides as a secondary in the
Pegasus avionics bay, and then is ejected.

See their web at http://enws229.eas.asu.edu/asusat/asusat.shtml

These programs are in addition to the SQUIRT effort
at Stanford that Bob Argyle mentioned.

Hi there. The Decameter radio bursts do not stay on a particular frequency. They are quite broad banded and move in frequency as time goes on. 22 Mhz is a good place to look, but it also has some broadcast stations on when the ionosphere is refractive to those freqencies. It is best heard on a broad band AM shortwave receiver with a directional antenna (like a Yagi or a loop) pointed at Jupiter. The emissions are very irregular, and seem to be most often observed when the moon IO is in certain positions around the planet.

There are many more satellites & modes to choice from than in days past. More operators are spread between many satellites, so it just seems like there are fewer operators. Just check out the satellites on field day and you will hear lots of hams.

it!

Same as any other activity which is spread primarily by word-of-mouth. A very large percentage of AMSAT's members find out about amateur satellites through AMSAT booths at hamfests. Which requires a local AMSAT member who's interested enough to help out and run the booth, and try to elmer others in to amateur satellites.

The best way for you to find others in your area is to get them interested! If you want to run an AMSAT booth at an upcoming hamfest contact Martha at HQ and get the info from her on what to do.

Statistcially ham radio is much more popular in certain areas, and less popular in others - it isn't even. I believe that there are bunches of hams in Ohio and Michigan.

Lower latitude hams have an advantage for the shuttle on low inclination missions, but most of the hams who contact the shuttle are not otherwise active on the satellites.

For obvious reasons surburan areas where there aren't many deeds which restrict outdoor antennas have more hams and more AMSAT members than densly populated city apartments and condos.

Texas is the area where AMSAT has the most volunteer area coordinators. In most other areas there's a shortage, and always a need for more AMSAT members who want to volunteer to help the cause.

Obviously there are certain states, primarily low population areas, where there are very few active satellite folks (as anybody who has 4 states to go to get a WAS can attest)

Not sure why specifically your area doesn't have many AMSAT members, or for that reason how many hams are in your area. But in the Northen Virginia, DC metro area there are *many* active AMSAT members, including many of the key people involved in Phase 3-D and SAREX.

452. JV FAX question

Newsgroup: rec.radio.amateur.space
Date: 1996-02-29 00:00:00 UTC
From: flegler@pilot.msu.edu
Message-ID: <4h4urr$1vjm@msunews.cl.msu.edu>
Source record: 22819

I just read the article on the JVFAX APT adapter in the Feb. issue of QST. I'm completely new to this field. What bands are these transmissions on, VHF, UHF, or HF? Thanks and 73 Stan K8RPA, flegler@pilot.msu.edu

453. Keps for tethered satellite on shuttle? anyone?

Newsgroup: rec.radio.amateur.space
Date: 1996-03-01 00:00:00 UTC
From: mack@ncifcrf.gov
Message-ID: <DnLy64.MD6@ncifcrf.gov>
Source record: 22820

Saw the following posting about the 20km long tethered satellite
link to the Shuttle, which should be visible from the ground. I thought
if I had the keps, I could predict when it would go overhead. Anyone
know?

Joe Mack

454. NORAD Two-Line Orbital Element Set: Space Shuttle (96060.25042824)

Newsgroup: rec.radio.amateur.space
Date: 1996-03-01 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4h66b5$31q@blackbird.afit.af.mil>
Source record: 22821

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial BBS,

http://www.mindspring.com/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

****

Until mid-March 1996, the old Celestial BBS may be accessed at (334) 409-9280 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Note: The old Celestial BBS will cease operations around mid-March 1996. It is being replaced with a new WWW site for distributing the current selection of data and software. The URL for this site is:

http://www.mindspring.com/~tkelso/

Data will continue to be available via anonymous ftp at archive.afit.af.mil.

****

455. Re: propogation question

Newsgroup: rec.radio.amateur.space
Date: 1996-03-01 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Mar1.133959.21431@ke4zv.atl.ga.us>
Source record: 22822

In article <4gsuvp$i5a@cloner3.netcom.com> MandD@ix.netcom.com writes:
>I am not in ham radio but thought maybe someone out there could answer
>a question for me.
>I am an RF tech working in satellite communications.
>Can someone give me a good definition of PROPOGATION...(propogation
>delay, RF propogation or whatever)

Well, I can't help you with a definition of propogation, but I can help with a definition of propagation. Radio propagation is the mechanism(s) by which radio signals get from point A to point B.

These mechanisms are limited by the speed of light in the medium through which they operate, hence there is propagation delay between point A and point B proportional to the distance of the path taken between the points divided by the speed of light for the medium.

There are different propagation mechanisms. The dominant one in any given situation depends on the frequency of operation and upon the medium(s) through which the signal must pass. The most basic mechanism is the direct ray path, called the line of sight path. In this case, the signal travels in a straight line between point A and point B. Signal strength decreases in proportion to the square of the distance between point A and point B. This is the most common mechanism at VHF and above, and is typical of satellite communications paths.

Other mechanisms include refraction, where the radio signal path is bent by variations in medium characteristics (ionospheric "skip" is an example of this), reflection where the signal is "bounced" coherently off a conductive surface (parabolic dishes reflect radio signals to a focal point, and reflections can occur from other objects, such as buildings), and scattter where the signal is incoherently dispersed by the medium. Reflection and scatter are related, with the difference being the size of the reflective surfaces in proportion to a wavelength. Surfaces large with respect to a wavelength yield coherent reflection while surfaces small with respect to a wavelength yield incoherent scattering of the signal.

Path mediums may also present signal absorption characteristics, where part of the signal is absorbed and transformed into heat. The ionospheric D layer is typical of this behavior at lower HF.

I'd point you to James Clerk Maxwell's equations for the basic behavior of EM radiation through space. All the various propagation mechanisms can be derived from these fundamental equations.

Gerhardt G. Herbst II, is the patent holder for "Cold Spot Module".
This product is for sale to an individual or manufacturer.

The "Cold Spot Module" is used to effectively reduce the operating
temperature of integrated circuits such as computer CPUs to maintain
reliability under extreme operating conditions. This module is protected
under a U.S. Utility Patent issued in October of 1995. A Utility patent
provides the strongest protection under U.S. law.

An independent North American Market Study was done on the product and the
potential market has been identified.

The product has not yet been introduced to the general public but is referenced
in the U.S. Patent catalog which is posted periodically. For an on-line reference
refer to:

http://www.uspto.gov

Search on Patent Number: 5457342

The title abstract is: Integrated circuit cooling apparatus

Note: A search on just the patent number will bring up the details.

Exclusive rights can be purchased reasonably with negotiable license term.

For further information, contact Gerhardt G. Herbst II.

458. Questions About The Argos Satellite

Newsgroup: rec.radio.amateur.space
Date: 1996-03-01 00:00:00 UTC
From: dmart@cnj.digex.net
Message-ID: <4h7k0v$lmj@cnj.digex.net>
Source record: 22825

I am looking for information about a satellite called Argos. I saw in the February Issue of Popular Communications in the Washington Pulse article mention of a satellite called Argos. The frequency of 401.650Mhz is used. Any information about this one would be appreciated. What is its orbit? What modulation is used? For what purpose is the satellite designed? If any folks in the group can shed light on this one it would be appreciated.

Dave Marthouse

In article <3132A9A1.1B64@worldnet.fr>, DUPERRAY Francoise <d0003689@worldnet.fr> says:
>
>Hello all,
>
>Does somebody heard the space shuttle transmission on HF bands (20 or 40
>mtrs) in Europe?
>Could somebody provide me the frequencies of US clubs which re-transmit
>earth-Space Shuttle conversations ?
>Thanks for your help.
>73.
>Olivier, F5RDS, Paris.

The Goddard Amateur Radio Club WA3NAN transmits the Shuttle
Air-to-Ground audio on 3860, 7185, 14295 and 21395 KHz SSB mode.
For listeners in the Washington, D.C./Baltimore MD area, Shuttle
audio is transmitted on 147.45 MHz FM.

Usually the transmission schedule coincides with the astronauts
wake periods. That is, the station is off the air during the
sleep periods. Also, being a volunteer organization, WA3NAN
operations are subject to the availability of operators.

Signal reports are encouraged. Send reports to:

WA3NAN
P.O. Box 86
Greenbelt, Md USA 20768-0086

More information, including the latest Keplerian orbital elements,
can be found on the GARC World Wide Web site at URL:

http://garc.gsfc.nasa.gov/www/garc-home-page.html

follow the links to the shuttle_FAQ page.

Happy listening!

460. OSCARs and CORONA

Newsgroup: rec.radio.amateur.space
Date: 1996-03-02 00:00:00 UTC
From: thomsona@netcom.com
Message-ID: <thomsonaDnnp5H.J1v@netcom.com>
Source record: 22827
Cross-posted to: rec.radio.amateur.space,alt.politics.org.cia,sci.space.policy

Probably this is already widely known, but it's new to me...

The American Radio Relay League's "The Satellite Experimenter's Handbook" by Martin Davidoff (ISBN 0-87259-318-5) has a paper by William I. Orr in its first chapter on the history of the OSCAR amateur radio satellites. According to it, the first two OSCARs were launched as subsatellites on Discoverer 36 (12 December 1961) and on an unidentified spacecraft on 2 June 1962. Oscar I rode to orbit on a Thor-Able rocket and so did (according to the TRW Space Log, Vol. 27) Oscar II.

Cutting to the present, we find in Jonathan McDowell's "US Reconnaissance Satellite Programs, Part I" (Quest (ISSN 1065-7738)), Vol.4, No.2, Summer 1995) that Discoverer 36 was the cover for the KH-3 CORONA spysat Mission 9029 and that the KH-4 MURAL/CORONA Mission 9036 was launched on a Thor on 2 June 1962.

The ARRL book also reproduces a letter dated 3 November 1961 from Joseph V. Charyk, at the time dual-hatted as Under Secretary of the Air Force and the first D/NRO, to John Huntoon, ARRL General Manager:

"I am pleased to advise that the Air Force will undertake to place in orbit an OSCAR package in conjunction with a military space vehicle launching. Our Space Systems Division has been instructed to accomplish the OSCAR package launching at the earliest feasible date on a non-interference basis to the performance or mission of the launch carrier vehicle.... Please be assured of the complete cooperation by the Air Force toward successful accomplishment of this amateur experiment..."

Kinda neat, I think.

Since the CORONA vehicles were CIA satellites, it would be interesting to know how the Agency responded to the OSCAR proposals. Also, since subsequent spysats (KH-9) apparently carried ELINT subsatellites, there is the possibility (pretty speculative at this point) that the OSCARs were seen as a quick-and-dirty way of testing out the subsatellite idea.

Hello all: I have been into the 1200 baud satellites (LO-19 mainly)
but still like to get on the analog birds as well (I'm confined to LEO's
because of my omnidirectional antennas - Eggbeaters). I have always been
a cw operator.
Lately, I've been trying RS-15, and have seen some, but not much
activity (it used to sound like Sweepstakes weekend every pass).
Additionally, the signals seem to be down in strength. Is the satellite
having some problems? Maybe my 10 meter receiver is dead (and I'm
screwing everyone up with my uplink?)?
Anyone have any comments?

Thanks and 73's de Bernie, KF0QS

I wonder how Mr Herbst slipped this one past the prior art
investigation? This technology has been around since the early 70's -
at least. For example, IBM and Amdahl main frames made extensive use
of it.

Paul,

That's a very blatent claim you make. This patent went through with only one need for clarification from the PTO. Obviously know one else sought such a patent which is evidence by the PTO issuing me patent # 5457342.

Those companies you mention have devices that are similar with respect to cooling only if you care to follow the patents mentioned on my abstract. However, NONE have developed the device I have NOR do they have a patent on such a device. As such, I am the sole owner to pursue development of this product or companies under infringement.

Gaerhardt G. Herbst

=========

MONDAY MARCH 4, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* CELESTIAL BBS SHUTDOWN *
==========================
After over 10 years of near continuous operation, the Celestial BBS operated
by Dr. T.S. Kelso will be shut down sometime around mid-March. Dr. Kelso
will be moving again and since there has been very little activity lately
on the system, there is little point in establishing a new line for the BBS
at the new residence. Of course, the orbital elements will continue to be
provided via the Internet and Dr. Kelso will establish a WWW site to
distribute the software at this location before the move. Dr. Kelso would
like to take this opportunity to thank each and every supporter of his
Celestial BBS these many years and looks forward to seeing everyone on the
new Internet site in the near future!

[Info via Dr. T.S. Kelso, relayed by Donald Roland]

* STS-76 LAUNCH VISIBILITY *
============================
The launch of Atlantis on the morning of 21-Mar-96 will provide a rare
opportunity for shuttle watchers in the eastern United States. Space
Shuttle Atlantis will launch at night into a high inclination orbit for
its nine day Mir rendezvous mission. Viewers from Florida to Boston
might be able to see the Shuttle as it streaks up the coast.

Usually, the Space Shuttle can only be seen by reflected sunlight when
it is already in orbit. However, on this particular mission, viewers can
watch the Shuttle *during* the launch when its main engines will be bright

enough to be seen from hundreds of miles away! The Shuttle will be visible for only a few minutes after launch and only while the engines are running. MECO (main engine cut off) usually occurs at about T+8 minutes into the flight. Shortly after MECO, viewers in the Northeastern United States and Canada may also see a flash or two from the separation of the external tank.

If you want to try to watch the Shuttle launch, try to find a location with a clear unobstructed view of the horizon because Atlantis will not get very high in the sky. It will rise from the south-east and travel north. Look roughly south-east a few mintes after launch for a bright, fast moving streak low in the sky. Binoculars are not needed.

The launch is scheduled for 3:34 am EST on March 21, 1996. Don't worry about launch delays keeping you up all night. Since this is a MIR rendezous mission, the launch window will be very short. Atlantis must launch within a few mintues of 3:34 am or NASA will scrub the launch attempt.

Additional STS-76 mission information can be obtained from NASA on the World Wide Web at http://spacelink.msfc.nasa.gov.

If you live in the New Jersey area and would like to organize a gathering to watch this event, please contact the author at dquagliana@aol.com.

[Info via Douglas Quagliana, KA2UPW]

* LINUX SOFTWARE *
==========
Discussions heard between Space Shuttle "Columbia" and mission control on NASA TV last week indicate that computers running under the Linux operating system are being used on STS-75. Linux is powerful 32-bit multiuser, multitasking operating system similar to Unix in many ways except cost and licensing.

Linux can run on most 386, 486, and Pentium-based personal computers in addition to Amiga and Atari computers. It is currently being ported to the ARM, MIPS, PowerPC, and PowerMac computers, and a 64-bit version is available for the DEC Alpha.

Linux was designed a few short years ago by Linus Torvalds, a graduate student at the University of Helsinki in Finland who took his first courses in `C' and Unix in the Fall of 1990. By October 1991, Linux version 0.02 was announced and this attracted the attention of thousands of programmers and software developers on the Internet. International collaboration in the development of Linux has resulted in a very powerful operating system whose capabilities are growing faster than those of commercial operating systems.

Part of the enthusiasm behind Linux development is rooted in the fact that like Unix, the Linux operating system is hardware independent. As a result, it is possible to author software for Linux that will operate equally well under many hardware platforms, whether they be a powerful mainframe or a small laptop. Its growth and development are reminiscent of the telecommunication innovations brought to the world through the efforts

of Amateur Radio Operators over the years. Linux also supports a wide variety of networking protocols, including AX.25 (Amateur Packet Radio) at the kernel level, a feature not many other operating systems can claim.

There already exists quite an extensive list of Amateur Radio and Amateur Satellite related software applications for the Linux operating system. That list will grow later this week with the release of the following programs written by KD2BD:

predict: A multiuser satellite orbital prediction program that also provides optical visibility information

dove : A simple DOVE-OSCAR-17 telemetry decoding program

uo11 : A simple UoSAT-OSCAR-11 ASCII telemetry decoding program

kepgen : A program that allows the creation of Keplerian data files in the NASA 2-line format from data entered through the keyboard

These programs are free for the asking and must be used for non-commercial purposes only. They were written in `C' and compiled using the highest level of optimization possible from GCC compiler version 2.5.8. The resulting executable files are in an a.out binary format. These programs will be made available via anonymous FTP at pilot.njin.net in the /pub/SpaceNews/linux subdirectory or uploaded to the AMSAT-OSCAR-16 or LUSAT-OSCAR-19 satellites by request. All programs include on-line manual pages with the exception of "predict" which contains a built-in help option.

Further information on the Linux operating system may be obtained through the World Wide Web at: http://sunsite.unc.edu/mdw/linux.html and many other sites around the world. A link to a HAM-HOWTO page describing other free Amateur Radio software available for Linux may also be accessed through this site.

Incidentially, the Linux operating system has been used exclusively for the creation and circulation of SpaceNews since the release of "Windows 95" in August of 1995. Perhaps SpaceNews can also be referred to as the first Amateur newsletter edited and circulated entirely under Linux. :-)

* THANKS! *

What I am wondering is what this has anything to do with amateur radio antennas, homebrew, space, etc.? The point is that this, and the preceding posts were made to the amateur radio news groups.

Cooling of microprocessors, and your grandstanding of being awarded a patent are of no interest to me or in any way pertinent to my interest in amateur radio. And that is why the newsgroup(s) have those titles.

If you are looking for invetors, get a clue and do it somewhere else.

If you are simply so proud of yourself for being awarded a patent for what appears to be anothers work, then HIP HIP HOORAY for you! Now grow up and go away.

Jim

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial BBS,

http://www.mindspring.com/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

****

Until mid-March 1996, the old Celestial BBS may be accessed at (334) 409-9280 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Note: The old Celestial BBS will cease operations around mid-March 1996. It is being replaced with a new WWW site for distributing the current selection of data and software. The URL for this site is:

http://www.mindspring.com/~tkelso/

Data will continue to be available via anonymous ftp at archive.afit.af.mil.

Having too much time on my hands, I went and looked at your patent.
The first part of the patent describes the exact CCD cooling method
used for years by Santa Barbara Instruments (and others) for cooling
CCDs. Your novel claim seems to be an IC cooler that is retrofitted to
an existing, uncooled IC.

477. Re: Why so little amateur space activity

Newsgroup: rec.radio.amateur.space
Date: 1996-03-06 00:00:00 UTC
From: Ed Garnett <ted>
Message-ID: <4hjvdr$lu5@dingo.cc.uq.oz.au>
Source record: 22844

Hi fellas...

Perhaps there is some plain reason, caused posibly by geographical location or time of day, why this question was first posed!? However, I would like to suggest that it can be explained simply by one word - COMMITMENT.

Yes, Amateur Radio is a very diverse hobby and it can be a major undertaking to cover a range of operating modes across many bands. The satellite aspect of Amateur Radio presents a similar challenge now, in as much as there exists one of the greatest array of spacecraft that has ever been made available to the amateur community! This in itself should be exciting enough!! And why there are not greater numbers of Amateurs pursuing an interest in satellites I do not know.

As with a vast number of spacecraft to choose from, so too is there a ready supply of CHEAP and excellent options for becoming QRV on the modern modes. I am referring in part to the no-tune downconverter and transverter kits (DownEast Microwave) - 1200 and 9600bps modems by G3RUH - really cheap TNCs (TNC2 clone - Z80 based) from G0BSX the BSX-2 (ever heard of that?) etc etc. Yes, you do need to arch-up the soldering iron but what the heck... it is Amateur Radio!

Of course the not so practically inclined Amateur is also catered for with commercially available equipment - the decision is yours, YES you actually have options avilable to you (some are just a lot more costly $$ wise!), you simply need to do a little home work. Make no mistake, everyone can enjoy a little (personal) experimenting even if it's just figuring out where best to put the receive pre-amp for better S/N!!

I too am enchanted by mode A (nearly) as much as mode S... and for my cents worth, I'd greatly like to see the continuation of both (and all modes) in future spacecraft.

I wonder if anyone has ever bothered to ask the same question of EME...? I would suggest not! Probably because that aspect of Amateur Radio does require commitment and determination. Something you may not find a lot of at your local HAM radio supermarket!

In 1982 I put a Peltier Cooler on a 8087 coprocessor in an IBM computer in an effort to speed up the clock. I had a PC board made and along with schematics and documentation. This progressed into modules for 80287's. In fact I hold the record for the highest speed attained using a 80287 in an IBM AT computer by cooling the 80287 down to -50 deg C.

I therefore have prior documented art on this invention and demand all royaties should be sent to me. <grin>

Bill Gates' success year after year is NOT the result of taking undue
advantage of some helpless victim.

Perhaps opportunism is just another catch-all phrase coined so the
have-nots could better antagonize the haves?

Hi !

Please, I need help in setting a ground station.
I want to receive the data from PoSAT-1.

The equipment that we have is as follows:

Radio - Kenwood TS 790 E
TNC - MJF 1278B
Kansas City Tracker - Board + Software
Yeasu G-5600B
Prelinear Amp. Controller

I tried to install Wisp, but it was impossible to track the sattelite and comunicate at the same time.
Do anyone knows about good software available in order to put one or two computers communicating with the sat.
and also saving the telemetry data.

Thanks

Luis Miguel

Gaerhardt-

I think some of us have jumped to the erroneous conclusion that your invention duplicates prior art. On the other hand, your statements do not clearly show how it is different from prior art.

You are looking for investors to finance development of a product that on the surface, appears to be old technology. I suggest you revise your "sales pitch", so that it is clear that your invention is (a) new, and (b) of commercial value. In other words, why would one want to use your invention instead of existing spot-cooling techniques?

Maybe they were talking about Space Shuttle Columbia. The shuttle had a visible pass over Dallas this morning at about 6:00 CST. There will be another one tomorrow (Saturday) around 6:04-6:06 CST due south and 27 degrees up. Check the Shuttle Web Page for landing and re-entry information.

Furthermore, there are also visible passes of the Tether Satellite coming up. For those opportunities you can check the SatPasses web page at:

http://ssl.berkeley.edu/isi_www/satpasses.html

Happy viewing,
-Manfred

488. Re: MIR and SAREX

Newsgroup: rec.radio.amateur.space
Date: 1996-03-08 00:00:00 UTC
From: gsteve490@aol.com
Message-ID: <4hq0in$9im@newsbf02.news.aol.com>
Source record: 22855

Indeed, a ground plane....best bet would be a 1/4 Wave, should have a nice capture at anywhere from 20 to 90 deg. spacecraft inclination.
good luck.....
n2lzh

489. Face On Mars Development

Newsgroup: rec.radio.amateur.space
Date: 1996-03-08 00:00:00 UTC
From: Brad Grier <bgrier@probe.net>
Message-ID: <4hofoh$fkm@jake.probe.net>
Source record: 22856

There's been an intriguing development regarding the so-called
"Face On Mars." For the details, visit the following URL:

http://www.probe.net/~brgrier/Submerge.html

For Netscape 2.0 with Java support, there's an animation based
on NASA Mars photography. It's definitely worth a visit.

490. NORAD Two-Line Orbital Element Set: Space Shuttle (96068.25042824)

Newsgroup: rec.radio.amateur.space
Date: 1996-03-09 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4hqu3v$fkb@blackbird.afit.af.mil>
Source record: 22857

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial BBS,

http://www.mindspring.com/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

****

Until mid-March 1996, the old Celestial BBS may be accessed at (334) 409-9280 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Note: The old Celestial BBS will cease operations around mid-March 1996. It is being replaced with a new WWW site for distributing the current selection of data and software. The URL for this site is:

http://www.mindspring.com/~tkelso/

Data will continue to be available via anonymous ftp at archive.afit.af.mil.

492. WTB/Trade: 70cm allmode for TH78/G500A

Newsgroup: rec.radio.amateur.space
Date: 1996-03-09 00:00:00 UTC
From: white_hae@ccsua.ctstateu.edu
Message-ID: <1996Mar9.073221.1@ccsua.ctstateu.edu>
Source record: 22859
Cross-posted to: rec.radio.amateur.space,rec.radio.swap

Looking for a Yaesu FT-790 70cm portable allmode. Cash or trade. I have the
following items for trade, partial trade, etc...
- Kenwood TH-78A dual-band HT in FB shape (no mods done).
- Yaesu G500A elevation rotor new-in-box
Thanks
Harry/N1QVE
white_hae@ccsu.ctstateu.edu harry@connix.com

493. Re: JV FAX question

I'm surprised no one has responded to this yet (9 March). Here's my shot at it.

The images you saw in the article were captured from NOAA satellites. NOAA 12 and NOAA 14 are currently sending APT images. NOAA 12 sends on 137.5 MHz, and NOAA 14 sends on 137.65. The Russian satellite Meteor 3-5 is also currently sending APT on 137.85 ins slightly different format, which I think JVFax can also handle.

Note that the APT adapter is not all you'll need. You'll also need a receiver/receiving system that has about 50 kHz IF bandwidth. This is much wider than the IF in most commonly available VHF receivers. Many weather satellite buffs buy special receivers.

Rich Griffiths W2RG

494. An Invitation

Newsgroup: rec.radio.amateur.space

Thank you to those who have already called to see the pages from this group.

There is a need to include some sort of write-up on the topics this newsgroup covers, as I realise this area is a bit thin and I'm no expert.

Anyone care to write a couple of paragraphs I can include in the pages? Email me here or via the pages, please.

Thanks

Having investigated this patent, it appears to cover a very, very
narrow area of widely used prior art. I particular it is a device that
can be added to an existing IC in an existing circuit to cool a single
IC. The
method of coolling (peltier junction, heat sink and fan) has been used
in many different fields - so there is nothing new here.

As far as it practical value, you would have to have room in the
device enclosure to add the add-on cooler, an method of
expelling the removed heat from the enclosure and some source of power

for the add-on
device(s). The needed additional room sounds sgnificant with the heat sink and fan. For each IC you needed to cool, you would need a seperate device.

It also appears that this patent is not even a very good replication of the
prior art of IC cooling. In the abstract it does not mention any method of regulating the IC being cooled. A peltier device will lower the temp of it host device by a certain level from the ambiant temperature. This means that as the ambiant temperature changes, so will the temperature of the cooled device. Regulation sets the device temperature at something less then the full cooling capability of the peltier junction and then monitors the temperature and regulates the peliter junction to insure the
cooled device stays at a constant temperature.

If the cooler is unregulated, then wild swings in ambiant temperature will produce wild swings in the device temperature.

In my humble opinion, this patented device is not worth much. It does not do the job well. There is so much prior art in this field that one could create a slightly different device and not be in conflict with this patent and would probably do a better job.

Best way is with a satellite dish. From where you're located a 7 to 10 foot C-Band dish would be required. If it's specifically for NASA TV then you can save a bit of the cost by using a dish which is only aimed at Spacenet 2 without any acutator motor which is used to move the dish to aim it at other satellites. If you scrounge a bit you can probably get by for under $200.

Alternately you can retransmit the WA3NAN Goddard HF transmissions as long as you obey the standard amateur radio rules about retransmissions.

In theory you could get the audio via Internet, but it wouldn't be high quality.

You could also get the audio with a long distance phone call, but that would be extremely $$$$$$.

Remember that it is legal for you to retransmit air-to-ground music (e.g. the wakeup calls), but not legal to transmit the press conferences or other audio which may be of a commercial nature, or otherwise prohibited on amateur frequencies.

Thanks for the message! Where abouts can I find/buy one of these
dishes. This is going to be just for shuttle audio, so unless there
is another satellite up there I can use, Spacenet 2 will be the one.

>Alternately you can retransmit the WA3NAN Goddard HF transmissions as

I hardly hear them on HF anyway, so I'll stick with Spacenet 2.

Most of the responses in this thread have been extremely informative --- but extremely off topic and do not answer the original question.

The original poster asked why amateur satellite operations were sparse in his particular area (Southeastern Virgina).

Most of the responses have responded to why amateur satellite work is a specialized portion of amateur radio and not a more popular form of communications for hams. Accurate and interesting information - but not responding to the original question.

I stand by my original response - amateur satellite work is a field which requires a lot of elmering and exposure. If you haven't been introduced by somebody in your area (either via a ham club or at a hamfest) then you aren't likely to get in to it yourself. And the solution is for satellite hams to encourage others in their area to get involved - show them how easy it is, how much better the quality of satellite communications is over other techniques.

>I'm trying to find out if I can receive the spacenet2 sat from
>the Netherlands, I'm at 52 North, 5.30 East..
>The sat is at 69 West...

Spacenet 2, and almost all domestic satellites, aims its signal towards the continental United States. So even though the satellite is above the horizon for over a third of the world its signal is aimed at a much smaller portion.

And the Netherlands is a bit outside of its planned audience ...

If you're trying to get NASA Select, check out some of the international birds, especially on missions with a heavy European or Russian involvement. I understand Gorizont 20 is used for transmissions from Kaliningrad to Houston during the joint Shuttle-Mir missions.

EOSS-25: CENTRAL COLORADO REPEATER/ATV BALLOON LAUNCH

Region: Central Colorado

Date/Time: March 16 / 11:00 AM MST, 18:00 UTC

Location: RC (Radio Controlled) model airplane airport
located east of Falcon, CO on US 24 (about 9
miles east of Colorado Springs on US 24)

Expected track: between 45 and 145 degrees azimuth

Flight
Experiment: US Air Force Academy satellite experiment
and RMRL crossband repeater

Project
Integrators: USAFA and EOSS

ATV: a. [EOSS] 426.25 MHz AM (1 watt output) NTSC color
b. [AFA] 439.25 MHz AM (1 watt output) NTSC color

VHF/UHF Repeater: 446.000 MHz FM Input
147.555 MHz FM Output

Beacons: 144.34 MHz Morse ID audio on FM
(periodic; frequency shared with packet
telemetry)

Telemetry: a. [EOSS] 144.340 MHz FM (1 Watt output)
AX.25, 1200 baud mostly plain english text;
includes APRS position data string.
b. [AFA] 147.450 and 147.500 Mhz FM, AX.25,
1200 baud; special telemetry format.

HF Net: 7.235 Mhz SSB

Or better yet, subscribe to satellite Times magazine, the only magazine in the world with a regular Radio Astronomy column edited by the dean of SARA, Jeff Lichtman. If you want to learn more about RA you could attend the Grove Comm Expo 96 this fall in Atlanta. The SARA (Society of Amateur Radio Astronomers) will be holding their fall conference in conjunction with the Expo. Have have no modesty, I'm the publicity chairman and they have no morals, scrubles, and anything else.

Hope that helps,

Larry Van Horn
Managing Editor
Satellite Times magazine

I am hoping someone can help me out with working the microsats. A friend of mine will be out to sea and wants to be able to receive email via the microsats. He is a ham of course but he like me have'nt be able to find much information on how to use them. I have the Satellite book from the ARRL and it helps some. Could someone that works them please email me or post here exactly how we could use them to send meal back and forth to each other? Also I assume that omni directional antennas would work best off his boat. Thanks for any and all help!

I have a 16-turn, 10 ft long G3RUH 70cm helix with an 18" square screen as
the reflector. I'd like to figure out the windloading for this antenna.
Can anyone suggest either the windload itself or how to calculate it.

Thanks,

Eric

Source record: 22778

How About a 80m liason net on 3.818 the morning of the STS-76 Launch? (3/21EST). ANS reports that folks on up the east-coast will be able to see the main-tank seperation. It should be quite visible!! I don't know if we here in syracuse (76 x 43deg) will be able to see much w/o climbing a TALL hill (Mt. Sevier comes to mind), or even if the infamous Lake Ontario Snow Snake will be up and runnin', clouds and all. But, a pre-set freq. such as suggested would be a nice idea to let the folks on the seashore report back to we in-landers.....

How 'bout it??

Hail Atlantis!!!

Hello Chris

Thanks for your answer. I will try to listen to the 66 MHz signals via ms with my AOR AR-8000.
I am also a radio amateur (LA6LU) with 100watts 50 MHz capability with my Icom IC-736 tranceiver.
I have ordered a digital tape recorder from germany, but have not received it yet. When I get it,
I can send & receive high speed morse at 10000 chars/min. via meteorscatter. I will also in the
near future buy or build a 5, 6 or 7 element yagi antenna for the 50 MHz band. However, I am a ms
newbie, but have been a radio amateur for 20 years, so the ms FAQ you sent was very welcome.

I am also the responsible person for 3 beacons here; LA4TEN on 28.211, LA4VHF on 144.890 & LA7UHF on 432.830. In the FAQ there was said that below 40 MHz is not good for ms. Well is that
really true? I have for many years now listen for 28 MHz beacon sucessfully via ms. And I have
some funny experiences with my own beacon LA4TEN wich runs 250 Watts ERP Omni directional. I have a summer cabin wich I use the whole year more or less in some weekends. When I drive with my car, I drive for 7 hours to get there. The distance by car is about 440 km in mountain
roads and I will suggest it is about 300 km in a straight line. In my cabin I have a 28 MHz tranceiver & an omni directional vertical. The signal from the beacon must travel (shortest distance) about 300 km as mentioned. The signal must also get over a high mountain in between West /

East of the southern part of Norway. The mountain is at least about 1000 meters high. Now to the
point; In my cabin I can receive the beacon day or night, summer or winter, right above the noise
floor. This was not expected at all at this distance!! Normally I would have expected a 28 MHz
signal reach about 100 km max and not in any way at my cabin. I am not speaking of skip signal here,
the skip will go typically to italy or to the middle of Europe. The signal is quite steady. Well
steady is not really true. The beacon is there about 60-70% of the time I listen. Sometimes it is
just below the noise floor & sometimes just above it. Sometimes the signal peaks wich I think is
because of meteorscatter or airplane scatter. But the question is; how can a 28 MHz signal reach
more than 300 km and "climb" over a big mountain and still be so steady at my cabin? What kind of
propagation is this?

I also thread this message as an answer to your origal output. If anybody can explain this it will
be highly appreciated. At least some of the signal is heard via ms :-)

73 de Geir/LA6LU

I need some help choosing an antenna for the 2 meter downlink. I am trying to build a solid receiver setup at as low a cost as is reasonable. I allready have a Yeasu FT-101ZD receiver at 14mhz using an Ameco Nuvistor convertor. It's old but sure seems to have plenty of gain and is a stable setup. I plan on making up for the convertors mediocre noise figure by installing a GasFet preamp at the antenna which will be only 20 feet or less away from the shack. I am contemplating a six turn helix but haven't worked out the mechanical details. (Need to get to Home Depot hihi). As an alternative antenna I am thinking of the KLM,Hy-gain or M2 Circular polarized yagis. I have notice they make both a large and a smaller model (15ele vs 11 or so). Which one is my best bet? Should I go for the higher or lower gain model? I like the idea of switching RHCP and LHCP but I'm not sure how important it is? Slowly but shurely and before the sunspots are back!

TIA

SB SPACE ARL ARLS004
ARLS004 Ham radio on STS-76

Mission managers at the NASA Kennedy Space Center have announced March 21 as the official launch date for the Space Shuttle Atlantis, and mission STS-76. The mission marks the third time the shuttle will dock with the Russian Mir Space Station. The astronauts are also planning to conduct Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). Five student groups have been selected to make scheduled radio contacts with the crew.

The shuttle will also carry a SPACEHAB laboratory, providing the astronauts with a working environment to conduct microgravity research and development, and to help resupply Mir.

The astronauts may find time to make contacts with the amateur community and their own families. All of the contacts will be 2-meter FM voice, using the shuttle's VHF Mir-docking radio. Frequencies, call signs and general operating information can be obtained from the new ARRL SAREX World Wide Web site at http://www.arrl.org/sarex/.

The following pre-launch Keplerian elements can be used by most computer tracking software to predict the ground track of the shuttle. The elements are based on a scheduled launch of March 21 at 0835 UTC. Thanks to Ken Ernandes, N2WWD, for the following elements which were found on the AMSAT Web site at http://www.amsat.org.

(AMSAT-format)

Here is some feedback: Thank You Very Much!

Seriously, the availability of your data has made it very easy to verify
that my own software is producing (or not) reliable data, which is vital
in setting up to receive the satellites.

I wonder if you might add the Weather satellites?

Paul

Source record: 22791

Hello Jeff,

I work the AO-16 and LO-19 (1200 baud) and the KO-23, KO-25 and UO-22 (9600 baud) satellites.

Depending of the satellites you need a PSK modem (1200) or an FSK modem (9600). I recommend this last because PSK satellites operate in SSB and it is difficult to track manually the PSK signal (due to Doppler effect, you need to change the receiving and transmitting frequency during the pass, as you know).

So, if you are going to use the 9600 FSK sats (KO-23, KO-25 and/or UO-22), you need a 9600 baud FSK modem, a TNC and a PC computer with an adequate program. I recommend WISP suite (you can get it at AMSAT), because with WISP you have orbit prediction, doppler correction and communications in only one package.

Well, if you want specific information on any subject, tell me.

Regards & 73s JOSE - EB5AGV / EC5AAU

Archive-name: radio/personal-intro
Revision: 2.1 1994/11/01 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

528. ISU USPC'96-NBS'96 Announcement

Newsgroup: rec.radio.amateur.space
Date: 1996-03-16 00:00:00 UTC
From: wallio@dsm1.dsmnet.com
Message-ID: <4ietul$54q@dsm6.dsmnet.com>
Source record: 22795

IOWA STATE UNIVERSITY
Announces and Calls for Papers

UNIVERSITY SPACE PROJECTS CONF '96 NATIONAL BALLOON SYMPOSIUM '96
Wednesday-Friday, July 17-19, 1996 Friday-Sunday, July 19-21, 1996

USPC'96 is a conference for NBS'96 is the second gathering of
university faculty, students and high altitude balloon enthusiasts
staff that are involved in some from both the professional and
form of space-related activities. amateur communities. NBS'96 is
USPC'96 is intended to be more designed as a show-and-tell
broadly focused than any existing gathering where the exchange of
conference, bringing together for ideas is encouraged and ample time
discussion and exchange of ideas, for demonstration of hardware will
university personnel active in be provided. Suggested topics
shuttle small payloads, small include:
satellites, sounding rockets, and
high altitude balloons. Suggested
topics include:

- Shuttle Small Payloads - History and Future Prospects
- Sounding Rocket Flights/Payloads - Interesting Experiences
- High Altitude Balloon Missions - High Altitude Science
- Small Satellite Programs - FAA and FCC Regulatory Issues
- University-NASA Relations - Getting Started
- University-Industry Relations - Payload Design and Capabilities
- Funding Opportunities - Flight System Design
- Flight Opportunities - Mission Management
- Tracking and Recovery

University students, faculty and staff, professional and amateur
scientists, and Amateur Radio enthusiasts are encouraged to share their
interests, education and experience by submitting and presenting papers for
either or both gatherings. Papers will be selected from submitted
abstracts, published in separate proceedings, and scheduled for
presentation in a single track format. Submission of an abstract indicates
the author's intention to write and present a technical paper. Abstracts
summarizing proposed papers, not to exceed 300 words, must be received by
May 1, 1996. Send abstracts to:

UNIVERSITY SPACE PROJECTS CONF '96 NATIONAL BALLOON SYMPOSIUM '96

Conference Co-chairmen: Symposium Chairman:
John P. Basart, Ph.D. Ralph Wallio, W0RPK
Professor of Electrical Engineering Middle River Valley Radio Obs.
Iowa State University ISU ISAT-SSOL-HABET Advisor
jpbasart@iastate.edu Iowa State University
and wallio@dsmnet.com
Ralph Wallio W0RPK@W0AK.IA

Conference Information

Registration Information:

Early registration fees must be received by July 1st. Refunds will be made to those registrants that must cancel by July 1st. A written cancellation must be received by July 1st. No refunds will be made after July 1st. Substitutions will be accepted. (Iowa State University reserves the right to cancel these programs due to insufficient enrollment and limits its liability to registration refunds only.)

Travel and transportation:

The Des Moines International Airport (40-miles south of Ames and Iowa State University) is served by several national and regional air carriers. Ground transportation is available from the Des Moines airport to Ames on a regular basis or vehicles can be rented from several agencies.

Contact FBOs at the Ames Municipal Airport (AMW) for fly in and tie down information. Arrangements can be made for transport to ISU conference facilities.

Attendees using surface transportation should use I-35, then west on U.S. 30, then north on Elwood Drive then West on Lincoln Way, to the Iowa State Center, Scheman Building.

Lodging:

USPC'96 and NBS'96 registration confirmations will include an Ames Lodging Guide and map. Many have limousine service available to guests.

Exhibit information:

A lockable area will be available for university, commercial, group and individual exhibits and demonstrations at no charge beyond full registration. Contact Darby Cooper at the Iowa Space Grant Consortium for further information.

Internet Information:

USPC'96 and NBS'96 WWW information: http://www.public.iastate.edu/~isgc

Schedule:

Wednesday Noon - 6:00 USPC'96 Exhibit set up
July 17th 3:00 - 6:00 USPC'96 Registration
6:00 Informal meal

529. PacComm Spirit-2

Newsgroup: rec.radio.amateur.space
Date: 1996-03-16 00:00:00 UTC
From: vk2top@vk2djg.une.EDU.AU
Message-ID: <245@vk2top.ampr.org>
Source record: 22796

Hi all, I recently purchased a new PacComm Spirit-2 which
I appear to be (maybe) having a little problem with. As it was
purchased with Satellite operating software inside, I really
dont understand a lot about how it works as compared to the
Normal PacComm TNC's.
I have it set to operate 9600BPS whereas it came normally
set at dual speed. The tnc appears to be a little DEAF as compared
to the PacComm DFM NB96 which I was previously using on the
satellites. I have the tnc interfaced to an Icom 820H. Nothing
was changed at the radio end...only the TNC was changed.
Is any-one else out there using the new spirit-2, and if so,
have/are they experienced thsi problem and if so, have they fixed
it and if so how. The old DFM NB96 appeared to work practically
right down to noise, but not this new one.

>73 de Geir / LA6LU

I don't think there are many stations operating 6m EME, the antenna
arrays required are too large for most amateurs to manage.

A note on meteor scatter, you don't want too large an antenna for
MS, a 3 or 4 element yagi is about right. You don't know precisely
where a meteor trail is going to appear, so too narrow a beam can
cause you to miss many opportunities for a contact. The meteor trail
only has to appear in the common volume of space both you and the
fellow on the other end are illuminating with your antennas. If
you make that common volume too small by using narrow beamwidths,
you'll miss most of the suitable trails.

=========
SpaceNews
=========

MONDAY MARCH 18, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* CELESTIAL BBS UPDATE *
========================
Stephen L. Wilson, N9OTT reports that the Celestial World Wide Web URL is:

http://www.grove.net/~tkelso

* MIR NEWS *
============
The Mir #22 crew, as of 11-Mar-96, is busy getting use to their new
environment and perparing for the arrival of the Shuttle Alantis, STS-76.
The 2-meter station has been turned off since the first of the month.
It is hoped that after the STS-76 Docking mission is over, that normal
PMS activity will resume.

Most of the Mir passes over the USA are currently during the early morning
hours. The Mir Space station will be visible in the morning sky over the
next few weeks. Please update your tracking programs, and look for Mir
passes 30 to 120 minutes after before sunrise.

Space Shuttle Alantis STS-76 will be docking with the Space Station Mir a
few days after liftoff (launch of STS-76 scheduled for 21-Mar-96). This
mission will last for approximately 9 days. The Shuttle will be docked
to Mir for approximately 5 days. The best set of Keps to use to track
Space Shuttle Alantis are the Keps for Mir. The orbit of the Mir Space
station is very stable, Mir only drifts 30-60 seconds a week. The orbit
of the Space Shuttle Alantis will be constantly changing until it docks

with Mir. You can find Keps on most PBBS and via the Internet. Any keps for Mir less than a week old will be sufficient.

Remember, only 1 station can connect to MIR's PMS (R0MIR-1) at a time, ALL others must wait.

[Info via G. Miles Mann, WF1F (mann@pictel.com)]

* STS-76 VISIBILITY *
==========
Richard Kramer reports that the last nighttime MIR rendezvous Shuttle launch was visible as far north as 30 miles south of Boston, Massachusettes. The view was brief but spectacular and would suggest that the effort required to watch the launch (weather permitting) is well worth it. It was particularly incredible to watch the launch live on the NASA TV channel and then step outside and see the vehicle streak by, close to the horizon just a few minutes later. (Make sure you keep the TV dimmed down to preserve your night vision).

* STS-76 SAREX NEWS *
==========
The STS-76 SAREX mission is currently scheduled for March 21st, with launch at 3:35 AM EST (0835 UTC). It will use the SAREX-M configuration (e.g. voice only using the VHF transceiver that is also used to talk to Mir).

The crew are:

CDR Kevin Chilton TBD
PLT Rick Seafross KC5CKM
MS1 Ron Sega KC5ETH
MS2 Rich Clifford N0CAL
MS3 Linda Godwin N5RAX
MS4 Shannon Lucid TBD

Kevin Chilton reported that he just took his test (and passed) and Shannon Lucid is interested in getting her license. She and her husband are planning on taking the Technician test before the launch.

The three previously licensed astronauts got their tickets for several different previous SAREX flights. Linda Godwin got her Technician license in 1990 (now a Tech Plus) for the STS-37 mission and also used SAREX on her second shuttle flight, STS-59. Rick Seafross got his license for the STS-58 mission in October 1993. Ron Sega got his license for the STS-60 mission in February 1994.

Kevin Chilton did not have his license for the STS-59 SAREX flight, but did use the transceiver for an educational contact.

Last December, Linda Godwin married fellow astronaut Steve Nagel N5RAW, making the couple the first married astronaut ham couple.

The crew will have their preflight press conference on March 12th at 1530 UTC, and this will be carried on NASA Television. NASA Television carried on Spacenet 2, Transponder 5, Channel 9 at 69 degrees West

longitude. The transponder frequency is 3880 MHz and the audio
subcarrier is 6.8 MHz. Polarization is horizontal.

[Info via Philip Chien]

* STS-76 ELEMENT SET *

JC> to connect to www.amsat.org but it did not respond (Sun 2100 CST).
JC> Thanks and 73.

WISP runs OK without registration, it's not crippled. But at the start there's
a posting that suggest to pay AMSAT for phase 3d and then you get a key.

Try //ftp.amsat.org, usually works OK here

Check out the 2 meter ham repeater 146.94 - Mhz. - K4GCC.

John Anderson K4GCC, the owner/operator has been providing continious
NASA audio from countdown through landing for almost every single mission
since STS-7 (June 1983). Coverage typically starts about 3 hours before
launch when the NASA commentator starts.

The repeater is located on Merritt Island, about 15 miles south of the
launch pads.

Tony,

for Linux you may want to check SatTrack V3.1. The latest version including
all patches is available from the SatTrack web page at:

http://www.primenet.com/~bester/sattrack.html

Individual patches are available from this web page, too.

I was wondering how well omni directional antennas would work with the Pacsats? As they are low orbit and fairly line of sight it seems a omni would work. Can someone enlighten me on this?

Thanks and 73!

Jeff

From: lm@demnet2.ubi.pt
Message-ID: <4ioetr$505@vixc.voyager.net>
Source record: 22720

Hello

Please, I need help in setting a ground station.
I want to receive the data from PoSAT-1.

The equipment that we have is as follows:

Radio - Kenwood TS 790 E
TNC - MJF 1278B
Kansas City Tracker - Board + Software
Yeasu G-5600B
Prelinear Amp. Controller

I tried to install Wisp, but it was impossible to track the sattelite and comunicate at the same time.
Do anyone knows about good software available in order to put one or two computers communicating with the sat.
and also saving the telemetry data.

Thanks

Luis Miguel

554. Homebrew sat. tracking controller?

Newsgroup: rec.radio.amateur.space
Date: 1996-03-20 00:00:00 UTC
From: joachimp@stud.unit.no
Message-ID: <4ipon4$1cc@due.unit.no>
Source record: 22722

We are in need of a satelite tracking controller, and naturally, we want to build it ourselves. We already have Satscan scanning software, and we know it is capable of talking to a rotor controller, but we do not know what format the data output is, and what kind of handshaking it expects. Does anyone know?

If not: does anyone know of other tracking programs that are easy to use, yet still have a documented way of talking to the controller. Buying an interface is out the question, given the fact that this club (LA1K) consists mainly of engineering students.

555. ? Software NOVA from W5RKN ?

Newsgroup: rec.radio.amateur.space
Date: 1996-03-20 00:00:00 UTC
From: Mueller1@Mailer.Uni-Marburg.DE
Message-ID: <4ioah9$dem@surz03fi.HRZ.Uni-Marburg.DE>

Hello from Marburg/Germany!

Somewhere I have read about the software NOVA,, written by W5RKN.
This software also controls the vfos of ICOM- or Kenwood-transceivers
during tracking of satellites (LEO-type). The result is a compensation
of the Doppler-shift and makes QSOs via these low orbiting satellites
very comfortable.
Where can I get the software - maybe by FTP? Any hints?

By the way: I will be QRV again via AO13 from Kaliningrad (UA2) as
R2/DK4VW during 2nd week of july 96.

Source record: 22728

Need a touch of help on this one, as I have a chance to buy this unit...

A bit of research shows me the Icom 735 is NOT able to do any satellite work...i.e., it cannot use the CT-16 satellite converter supplied by Icom...

As I am interested in working ALL ham modes, can anyone tell me if the 735 can do ANY satellite work of any kind...appreciate this info!
* RM 1.31 2831 * ... Ham radio operators do it with higher frequency.

Ok, so for MIR/Shuttle flights, MIR stays on 145.550 simplex, and the shuttle uses 144.45&47 / 145.84 split, right? Or does 145.55 get turned off for the flight and only one of the ships communicate with us down here?

Thanks,

Greg KO6TH

Someone else pointed out that sat-tracking software cannot track objects
outside earth orbit. You must use an astronomical tracking program.

Jeff: I have been PACSAT active for about a year now, using the M
Squared Eggbeaters on 2 meters and 70 cm (I'm not using the optional
ground plane accessory which would add about 6 db to the overhead lobe).
Although I clearly don't get the performance that I would with
directional antennas, I get two good passes a day, and can download about
20 to 30 kb's per pass. I can upload relatively easy as well. I'm using
the Eggbeaters with a Mirage preamp on the mast for 70 cm, and a Mirage
brick on the 2 meter uplink. The rig is a Yaesu FT-736R.
For not having a directional antenna, I do quite well. I am
limited to the 1200 baud birds. I am told that if I tried the 9600 baud
satellites without directional antennas, I wouldn't get very far because
of the long queue's for usage on those birds.
Let me know if you've got other questions. 73's de Bernie, KF0QS

>I have seem a Mac program that uses the box but the
>OrbitTrack author could mod the program to use the GS232 hardware.

The firmware in that box is very funny... I think someone should
write new firmware before it is really useful.

The only thing it does, is providing single-letter commands to let
the rotors move UP,DOWN,LEFT,RIGHT and commands to read back the current
A/D converter values (rotor position).
This means the host system has to be part of the control loop, and when
the system crashes or the program exits unexpectedly the rotors keep
doing what they were last told to do (turning).

As the box includes a microprocessor, this is silly. The commands should
have been like "turn to 300 azimuth, 20 elevation" and the box itself
should take care of the control loop and report back when it has reached
the target direction.

Fortunately, the current firmware is so simple that you can easily
disassemble it, and write new firmware with more reasonable behaviour.
The processor is 6800-family, if I remember well.

Rob

tnx for responding!
I have tried Timestep - but they don't have a schematic disgram for this
receiver (!!???)
Yes - I have traced the pcb, but a lot of work! I have traced parts of it
and found that solutions are not too 'good' - the squelch system turns
the power to the audio amp. on and off with transistor!! This part is
already modified. The main problem seems to be 'noise' comming into the
10.7Mhz IF-system trough the ceramic filter! I have to think it over
again - do I want to spend more time on it? I have found another diagram
and at the momnet I'm looking for an old xtal filter with wide passband!
Thanks again for bothering!

I am curious if there exist an satellite antenna tracking software/hardware that enables smooth (continous increments) vice the stop-n-go action. I think that I remembered seeing one a while back that had a ramping software with a hardware mod available?? I have an EMOTO az/el system and would like to try something in this configuration. I currently run WISP but can adapt if required.

Regards, 73, John AA6QN

don't know if it went through the first time, I'll send it again.

For those of you hams that are interested but not aware, there is currently approaching earth (but won't hit us) a recently discovered comet
that should become the brightest comet since Comet West in 1976.
Comet Hyakutake, C/1996 B2 is already mag 2.5 and brightening noticablely every day. A tail has developed that should grow quite long when it pass the earth just 10 million miles away on the night of March 25/26 1996.

I have seen a few request on packet radio for the orbital elements, here they are.

Comet Hyakutake C/1996 B2.

Perihelion date, T 1996 May 1.14025 TT
Eccentricity, e 0.999846
Perihelion distance, 0.230123 a.u.
Argument of perihelion 130.1925 deg.
Longitude of ascending node, 188.0514 deg.
Inclination, i 124.9016 deg.

I don't know if they will work in Traksat or Instant track etc, I never tried them. Comets orbit the Sun , not the Earth so I don't know if satellite tracking programs can handle it properly.
Your best bet is to download a shareware program like Skymap or HomePlanet then plug the elements into these programs, they will display a more easier to understand view of the sky then what satellite tracking programs offer.

In late March the Comet will become circumpolar thus visible all night, look for it moving pass the Big Dipper and on past Polaris between Mar 24 to 28, it should be at its brightest then.
More information can be found on the Internet, point your web browser toward Comet Hyakutake.

I heard some group is going to image Comet Hyakutake with ground based radar. Maybe some well equipped hams may be able to try for the first ECE. (hi)

572. NORAD Two-Line Orbital Element Sets (TLE779)

Newsgroup: rec.radio.amateur.space
Date: 1996-03-22 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4ivdfb$9sp@blackbird.afit.af.mil>
Source record: 22739

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial BBS,

http://www.mindspring.com/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

Until mid-March 1996, the old Celestial BBS may be accessed at (334) 409-9280 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Note: The old Celestial BBS will cease operations around mid-March 1996. It is being replaced with a new WWW site for distributing the current selection of data and software. The URL for this site is:

http://www.mindspring.com/~tkelso/

Data will continue to be available via anonymous ftp at archive.afit.af.mil.

****

573. NORAD Two-Line Orbital Element Set: Space Shuttle (96082.37240185)

Newsgroup: rec.radio.amateur.space
Date: 1996-03-22 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4ivdk0$9t9@blackbird.afit.af.mil>
Source record: 22740

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial BBS,

http://www.mindspring.com/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

****

Until mid-March 1996, the old Celestial BBS may be accessed at (334) 409-9280 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Note: The old Celestial BBS will cease operations around mid-March 1996. It is being replaced with a new WWW site for distributing the current selection of data and software. The URL for this site is:

http://www.mindspring.com/~tkelso/

Data will continue to be available via anonymous ftp at archive.afit.af.mil.

****

574. Re: Using Omni directional antennas for Pacsasts?

Newsgroup: rec.radio.amateur.space
Date: 1996-03-22 00:00:00 UTC
From: rob@pe1chl.ampr.org
Message-ID: <DooF20.M9n@pe1chl.ampr.org>
Source record: 22741

In <4iqcue$bb4@crl.crl.com> jeffj@crl.com (Jeff Jones) writes:

>I was wondering how well omni directional antennas would work with the
>Pacsats? As they are low orbit and fairly line of sight it seems a
>omni would work. Can someone enlighten me on this?

Not very well...
Maybe you can get some results with the 1200 bps PSK sats, but for
9600 bps FSK the signal level really is too low for a good BER.
Of course you can try it, to get the feel of what satellite packet
is like. Then you can install steerable yagis later.

You will also need to use a lot of transmit power to get sufficient ERP.
Many stations use about 30W in a yagi, so you would need about 250W
for comparable ERP.
(the ERP is not really needed when looking at the sat sensitivity specs,
but unfortunately there is often a lot of QRM on the uplink)

Rob

Joe -

Could you post the following news bulletin?:

The Larkfield Amateur Radio Club ARES/RACES unit will be having a
Satellite Communications session / demonstration on Saturday March 30,
1996 at the Huntington Town Hall, Route 25A. Setup will begin at
approximately 8:00 A.M. This activity is open to the public.
Interested amateur radio operators are encouraged to attent.

For further information, check in to the AMSAT Satellite Net on Tuesday
evening at 8:00 P.M. on the WA2SNQ repeater 147.075 MHz / + (4Z PL -
136.5) or contact Ken Ernandes, N2WWD

576. need info on JRC positioner and ham sat`s

Newsgroup: rec.radio.amateur.space
Date: 1996-03-22 00:00:00 UTC
From: Stefan Bauer <bauer>
Message-ID: <4iu8cg$fae@hrz-ws11.hrz.uni-kassel.de>
Source record: 22743

hi people with sat and tv-sat experince...

I`m new to the sat business. so as you know all beginners are asking
questions about all and everything. so this is what you can expect when
you don`t stop reading now !

my name is steve, dl1fdf/vy1qrp, qth kassel central germany, I am 28.

1. looking for frequency table (tv sat, canadian channels, NOAM.. !!!)
(which I can reciever in germany OK :-)

2. need all info e.g. wireing etc., need remote controller with rs 232
for:
---> Japan Radio Company ERP 203, 24v, 18watts (it`s a 2 in 1 ?:-) <---

3. need datashett of Low Noise block down Converter from:
---> DX ANTENNA CO., LTD japan model DSA-528 RF 10.90 ~11.70 ghz <-

4. any ideas about using this stuff for ham sat`s (e.g. for phase 3d)
the dishdiameter is 1.80m

thats it for now....
if you just have one answer to all this, perfect I already won!
thanks for helping a dummy with a short answer.....

>difference that that won't sway me. I'm looking at the value aspects.

The founder of M2 is the "M" from KLM (can't 'member the name thius second)--both are excellent antennas, but the M2 antennas are rugged beyond description, the KLM mechanical construction is average. I use the M2 30 el 440 X-Yagi and the 14-el 2m X-Yagi with excellent results. Can't imagine why you'd need 22/42 elements for a low earth bird... Beamwidth is pretty narrow for the kind of angular rates you'll see tracking the low birds.

Bottom line--they're both good electronically, but the M2 is THE antenna if you're in a mechanically challenging area (e.g. wind, ice, etc)

Sorry if this is a dumb question but is it possible to get an internet
connection via ham radio and satellites used for amateur radio?

I am thinking about this possibility for communications in remote areas -
areas that are not likely to be served by Internet providers.

Thanks, Phil.

584. Tracking Multiple Sats Program

Newsgroup: rec.radio.amateur.space
Date: 1996-03-23 00:00:00 UTC
From: sfton@scfn.thpl.lib.fl.us
Message-ID: <4j1td8$jnh@ns1.thpl.lib.fl.us>
Source record: 22751

Anyone recommend a Satellite tracking program that will display multiple objects on the screen and track both of them. STSPlus will only put one at a time on the screen, as well as others I have tried. During the present STS76 and Mir mission, it be nice to track both when they not docked together. WinOrbit 2.8 will display a secondary satellite, but will only update the track of one object. Keith O'Brien

Hi Tom,

The 735 will work just fine with RS-12 which is currently running with a 15
meter input and a 10 meter output.

All of the other amateur satellites either require VHF/UHF inputs or outputs
and your 735 will not work on these frequencies without transmitting or
receiving converters.

Bill

> watts out at 6.

6 meters is a pretty poor frequency for EME due to high galactic and other
background noise and low antenna gain. Generally higher frequencies are
better for EME (up to around 10 GHz or so). Have fun on MS.

SatTrack can track many satellites at the same time, and display all
of them on a graphical display and a multi-line text screen.

I am both an amateur astronomer and also into amateur radio, with a
keen interest in hamsats and spacecraft. I can assure you that Keps and
orbital elements are not used by the SAME software.

Keps use an earth-centered frame of reference, orbital element use
a sun-centered frame of reference.

Orbittrak is *FANTASTIC* - better than any DOS or Windows satellite tracking program which I've used. You can track up to 1000 satellites (or more!) simultaneously in real time (well, it helps to have a PowerPC with an 80 Mhz. processor plus an accelerator board if you really want to do 1000 at the same time) does excellent predictions with many different Earth gravitational models, has an excellent database, and many other features which i really use.

I export data from Orbittrak in to spreadsheets (to make prediction charts and graphs) and Voyager (to plot visual satellite passes against the stars). The Orbittrak/Voyager combination helped me be one of the people who "discovered" the secret DoD-1 satellite launched from the shuttle a couple of years back.

There is one unusual "feature" I discovered about using Voyager to plot Orbittrak files though. If the satellite is above the horizon for a long period of time (e.g. Molniya, high altitude, etc.) then you get some pretty confusing ground tracks. Orbittrak exports a set of celestial coordinates (RA & Dec) for your site. When Voyager imports those units it plots them against the sky you've chosen, not realizing that those particular coordinates are for different times -- while the Earth is still rotating! So it can look pretty strange.

>Is phase 3D to launch this year or next?

officially Phase 3-D is still on the manifest for the Ariane 502 launch, which, according to ESA, is scheduled for the november-december 1996 timeframe. Naturally any problems with the 501 launch or slips in the schedule could easily push it in to next year.

Unofficially there is a possibility that Phase 3-D may be taken off 502 and put on an Ariane 4 launch vehicle if it helps satisfy ESA and Arianespace's requirements.

In any case we'll all know better after the launch of Ariane 501, currently planned for June from the latest I've heard.

these are my own comments, representing myself only. Not speaking for AMSAT or the Phase 3-D integration team.

hello. i have recently builted up a new computer for myself. i ordered
a new botherboard/cpu and ordered the intel 100 mhz cpu chip to go in
the new mb they were out of the intel and sent me the amd 120 mhz chip
instead. What I want to know if anyone out there has an amd cpu chip
and if instant track runs ok with it. It does not on my system. I go
to the menu option number 2 to track a satilite with the map and text
on bottom. well the text info on the nbottom of the screen is all
garbled and not read able. I would like to hear from people who have
this cpu chip and run it to see if you have the same problem.

Check again... STSPLUS will track 32 satellites at a time plus the primary satellite. STSPLUS also allows you to designate a target satellite and it will display the range and range rate between the two birds. I have also recently purchased MicroOrbiter 3 from Precision Software Solutions at 713-538-1694 ($50.00.) It can only track 20 birds at the same time but has much more data available. Both have their merits and I will be paying the shareware on STSPLUS soon (only $8.00.) Most sat tracking programs do allow multiple bird tracking. Check your docs again and good luck...

Joe -

Could you post the following news bulletin?:

The Larkfield Amateur Radio Club ARES/RACES unit will be having a
Satellite Communications session / demonstration on Saturday March 30,
1996 at the Huntington Town Hall, Route 25A. Setup will begin at
approximately 8:00 A.M. This activity is open to the public.
Interested amateur radio operators are encouraged to attent.

For further information, check in to the AMSAT Satellite Net on Tuesday
evening at 8:00 P.M. on the WA2SNQ repeater 147.075 MHz / + (4Z PL -
136.5) or contact Ken Ernandes, N2WWD

From: okx@extro.UCSD.EDU (Philip Rhoades)
Subject: Dumb question - ham <-> Internet connections

Sorry if this is a dumb question but is it possible to get an internet
connection via ham radio and satellites used for amateur radio?

I am thinking about this possibility for communications in remote areas -
areas that are not likely to be served by Internet providers.

Thanks, Phil.

Subject: Icom 735 query

Need a touch of help on this one, as I have a chance to buy this unit...

A bit of research shows me the Icom 735 is NOT able to do any satellite work...i.e., it cannot use the CT-16 satellite converter supplied by Icom...

As I am interested in working ALL ham modes, can anyone tell me if the 735 can do ANY satellite work of any kind...appreciate this info!
* RM 1.31 2831 * ... Ham radio operators do it with higher frequency.

597. Hyakutake Comet Radio Bounce Test Results

Newsgroup: rec.radio.amateur.space
Date: 1996-03-24 00:00:00 UTC
From: mwcook@cris.com
Message-ID: <4j487a$mhc@tribune.cris.com>
Source record: 22761
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc,uk.radio.amateur

Hyakutake Comet Radio Bounce Test Results

Based on poor ionization at VHF, it appears that
Hyakutake Comet bounce is doubtful. Never the
less, last night I made a concerted effort. Here
are the results:

- System used was my 2mtr EME station and the FFTDSP42
program. EME Signal echo detection S/N margin is
20+ dB with FFTDSP42 integration set to 1.

- For the comet bounce test, integration was set to
8 for a detection increase of 4.5 dB. Total
system S/N EME echo margin was aprox 25 dB.

- A continuous 1500 watt, 144 Mhz carrier was
transmitted for 45 Seconds. The receive period was
75 Seconds. Any reflection from the comet should
have been visible as a line trace during a portion
of the display receive window.

- Transmit offsets of 0, +1, +2, -1, -2 Khz were tried
during the test period to allow for various doppler
effects.

- After an hour of testing, no traces were seen. It
is possible that some pointing error existed during
the test since we had cloud cover and I could not
do a visual validation.

- I used the "Home Planet" program and the latest
comet position within the Arcturus star group.
It would be nice if one of the astronomy programs
would provide AZ EL pointing information
for celestial objects. During the test period,
the EME array was moved over a +/- 10 degree range
in AZ and EL.

It looks like thunderstorms for tonight so it is doubtful
that I'll be able to make additonal tests for the perigee
night.

Details on the EME station and FFTDSP program used for the
test is available on my web page.

Try Satspy. It's great! There are so many things that you can do with
your mouse and its left and right buttons in this program that I'm _still_
discovering neat things (i.e. its user interface is excellent).

The Satspy web page is at: http://www.usa.net/acappella/satspy/satspy.htm

Be sure to download the satellite element set available there, too.

For years, I have used an old Epson PX-8 handheld CP/M machine to
track satellites. I used a homemade BASIC program derived from the
wellknown "basic orbits" by W3IWI.
It interfaces to an AMSAT-DL rotor interface, but of course it is
easy to modify the program to control something else.

So, if you have one of these machines (or something similar) laying
around somewhere, it is a cheap solution.

There are also single-chip micro designs, like the TrackBox, that you
can build yourself.

When you use a tracking program for which source is available, it should
not be too difficult to convert to continuous motion by calculating
the direction change rate and feeding it to the motors (as a first
approximation) instead of doing start/stop operation.
I sort of remember reading about a system that did this (by ON6UG? or
G3RUH maybe?), but I have no details.

It should certainly operate much smoother, especially on those large
rotators and with big arrays. When my system was still operative, I
often looked at the swings of antenna direction triggered each time
the azimuth was updated, and thought "something ought to be done about
that..."

And unfortunately, advocating running more power just aggrevates the
QRM problem. It is certainly the selfish answer, but it may be the
wrong system answer. A better user management protocol would be a
better system answer.

It's the age old question in amateur radio, dominate or cooperate.
Domination seems to usually win, and that's probably not a good
thing overall.

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

In article <Keith.882.0137122B@unix.asb.com>, Keith@unix.asb.com (Keith Knipschild - LI
,N.Y) says:
>
>A couple of years back, I heard NASA used a SCPC audio channel, Is
>this still true ? I ask because Nasa Select's audio is sometime
>different from WA3NAN (Amateur Radio Broadcast). Wa3nan calls
>there broadcast " Nasa Contract Audio "..
>

'NAN uses the Shuttle Mission Audio feed that is transmitted from JSC
to other NASA centers. Yes, it is a SCPC circuit that is carried
under contract by GE Americom. Note that this circuit is established
to distribute the Mission Audio to the NASA centers, not to
broadcast to the general public (small RO terminals). What this
means is that unlike most private radio feeds that a home (TVRO)
SCPC receiver can tune in, the Mission Audio circuit is transmitted
at a power level much lower, since it is designed to be received
by earth stations with 30 foot dishes.

The QRM is not from fellow satellite users, Gary...

The main source of QRM seems to be taxi-cab and similar usage of
the 2M band in countries where amateur radio is not popular and
the government is not concerned with international agreements.

But there is also usage by amateurs not knowing about satellites.

Increasing ERP is really the only way to overcome this QRM, because
there is no feedback mechanism to the cause.

607. JVFAX and weather sats

Newsgroup: rec.radio.amateur.space
Date: 1996-03-26 00:00:00 UTC
From: skontorp@telepost.no
Message-ID: <4j8i0p$ov@nms.telepost.no>
Source record: 22674

Hi folks!
I'm trying to use JVFAX version 7.1A to receive weather fax direct form NOAA/MET sats, but I have som problems, and I hope I can get som help here!

I have used the 'original' interface described in the JVFAX docs, and everything is working ok. The problem is that I get 'banana' pictures due to the doppler effect (?). To do this job, I need a syncronous interface. In the last edition of RIG magazine an interface was published. I made my PCB and tried it together with JVFAX - no luck! The interface seems to be working ok - I'm not sure but I suppose the 'amplityde' of the received signal should represent the gray level (?). In HF the frquency is representing the gray level. Am I right?

The RIG interface is connected to the printer port, and I have configured JVFAX to use 'BidPortIRQ' with the correct address and IRQ. I get signals indicated in the 'monitor window', but it's impossible to adjust the gray level between white and black by adjusting the amplityde on the incomming signal. I have tried a 'live' signal, and also an audio generator, both results in only noise!

Does anyone use this interface, or this configuration in JVFAX?

All tips are welcome!

6M EME is not common, but there are a few hardy souls on that mode. I will say it does take a strong station to pull it off though. I was listening on the US end when W7HAH worked OH2BC a couple of years ago. 'BC had 4 yagis and Shep had a single M Squared. Minimum 6M EME: M2 + KW. Good DX.

I should have noted your geographical location, Rob. My comments
may be inappropriate for your situation. However, in the US,
those types of signals are not an issue, because those types of
operations won't be in the footprint of a LEO bird, so most of
the QRM *is* from other satellite operators, and advocating
running more power does aggrevate the situation.

613. >>>>HELP - Small VHF Xmitter for Airborne Telemetry<<<<

Newsgroup: rec.radio.amateur.space
Date: 1996-03-26 00:00:00 UTC
From: BlueSky@tiac.net
Message-ID: <315853B1.5FD5@tiac.net>
Source record: 22680

Can someone help me by pointing me to a schematic or an article of a small VHF transmitter? It is
to be used to relay telemetry from a series of high altitude rockets. Following are the (desired)
specs:

Frequency: 2m band or nearby; XTAL controlled;
RF Power: 50-250 mW output;
Supply: 9-12 VDC (battery);
Modulation: N/A

Complexity (ie. size and weight) should be as low as possible, as should the cost - lets face it -
the typical life of these devices will be measured in minutes. I would preffer to build the xmitters myself as integral part of a telemetry package.

I have hundreds of various scanner crystals that fit in this category. They have fundamental
frequencies around 16MHz, but I don t really know if I can use them for this project.

I would very much appreciate any help in this matter. I can be also reached at

mailto:BlueSky@TIAC.net

My thanks to all those who reply!

From: jgarver@ichips.intel.com
Message-ID: <4j9n29$r3k@news.jf.intel.com>
Source record: 22681

How long is Phase 3D expected to last once it get launched?

I'm rather dismayed that Phase 3C (AO-13) is not expected to
last out this year and I haven't even had a chance to transmit
to it yet. That one was launched in 1988? Seems like yesterday.

At least AO-10 will still be up!

618. Albany, NY SAREX Contact Rescheduled

Newsgroup: rec.radio.amateur.space
Date: 1996-03-26 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <ZhKIFPH.sanderman@delphi.com>
Source record: 22685

FOR IMMEDIATE GENERAL RELEASE Page 1 of 3

Preparations are nearly complete at Bethlehem Central High School for Friday morning's scheduled amateur radio contact with space shuttle astronaut Kevin P. Chilton. Several students at the Delmar school have already been through a "dress rehearsal", readying their questions for the Atlantis Commander.

The question and answer session has been planned for nearly three years by members of the Albany Amateur Radio Association in cooperation with NASA, the American Radio Relay League, and school officials. Bethlehem senior Geoff Phillips, himself a ham radio operator, suggested the contact to school's science department.

Four of the six Atlantis astronauts are also ham radio operators. Commander Chilton will use the same ham radio equipment aboard the shuttle to talk to the students that was used to establish communications with the Russian Mir space station and coordinated the docking of the two spacecraft over the weekend.

Technical preparations at the school are also approaching completion for the contact, which has now been re-scheduled for 6:58 AM Friday. A sophisticated amateur radio station, complete with computerized tracking equipment which automatically points an array of specialized antennas at the shuttle as it passes overhead, has been set up in the school's library.

Unlike last summer's Shuttle Amateur Radio EXperiment contact at the Schenectady Museum & Planetarium, this operation will use direct air-to-ground communications with Atlantis. David Jones of Albany, who is coordinating the technical issues for this

"SAREX" contact, notes that the Schenectady effort involved a telephone and satellite link as the shuttle flew over South Africa. On this mission, Atlantis will fly nearly directly overhead.

But as the Atlantis crew works on its mission objectives in space, its the amateur radio and educational aspects of the flight that seem to be attracting a lot of attention here on the ground. Several hams from the Bennington area, members of the Southern Vermont Amateur Radio Club, have been assisting Jones with assembling equipment and coordinating operations with NASA.

It's a rare opportunity for students to get a first-hand, hands-on experience with the space program. The mix of space travel and communications involve facets of mathematics, geography, astronomy, physics, computer science, and the communications arts. And excitement at the school is increasing as the time approaches.

The national news service "This Week in Amateur Radio", which originates from the Albany area, will carry the student's questions and astronauts answers live via satellite to hams across the US and Canada. WA3NAN, the ham station at the Goddard Space Flight Center in Greenbelt, Maryland, will transmit the contact worldwide on "short wave" frequencies. A UHF radio link from the school to a ham station in Stillwater will facilitate regional and national "broadcast" of the contact.

From Stillwater, the signal will be sent to a satellite uplink station near Knoxville, Tennessee and back to the Albany club's repeater in the Helderbergs. Locally, ham radio enthusiasts and scanner listeners can listen in on 145.17 and 145.19 MHz.

The Shuttle Amateur Radio EXperiment is sponsored by the American Radio Relay League, of Newington, Connecticut, AMSAT - the Radio Amateur Satellite Corporation, and NASA, and supported by the Federal Communications Commission.

END END END

Stephan M. Anderman, WA3RKB
ARRL Public Information Coordinator, Eastern New York Section
email: sanderman@delphi.com
packet: WA3RKB @ WA2UMX.FN32AW.ENY.NY.USA.NA
phone: 518/664-6809

Note: The contact will be carried in the Albany area on the Albany ARA KM2H repeater on 145.19 MHz and on the Troy ARA NY2U repeaters on 145.17 and 444.225 MHz. In addition, it can be heard throughout North America on the Anik E-2 commercial communications satellite at 107 degrees west longitude, transponder 18 (9B vertical), 5.8 MHz wide-band analog audio. As noted in the release, WA3NAN plans to air the contact on their usual HF frequencies. Coverage is now scheduled to begin at 6:40 AM EST on Friday, March 29th.

All it should take to see the comet is a clear night and knowing where to look. I live within 10 km of downtown Houston. This is one of the worst light polution areas on the earth. After failing to find the comet on Wed. night for not knowing where to look, I found it on Thurs. night directly between arturus and the horizon. About half way around 11 pm local time. Once I knew where to look, I was able to see it even without my glasses (and my vision runs near 20/200.) The disconcerting thing about comets is that they appear to be smudges on the celestial sphere. You develope an uncontrolled urge to try and reach up and polish the skies. This must be why the ancients ascribed malevolence to them... Since Friday, it has been cloudy and the comet viewing bad.

>
> At least AO-10 will still be up!

The reason AO-13 will "crash" later this year is that its orbit is subject to repeated gravitational "jerks" by the Sun and Moon. These perturbations cause the eccentricity of the orbit to change, and the satellite will literally bang intop the earth. The demise has absolutely nothing to do with atmospheric drag (which is what caused the Chinese satellite to re-enter recently).

If there is enough motor capability available, a high-eccentricity satellite like P3D and AO-13 can be give counter nudges to keep it from crashing. AO-13 had only limited motor capability used 8 years ago to place it into its final orbit. P3D will have a second very innovative motor onboard. The second small motor uses ordinary ammonia as a "fuel" and passes the ammonia thru an electric arc. The arc-jet motor looks very much like a large hollow spark plug. Some of the spacecraft's ~800 watts of electric power provides the thrust by heating the ammonia in the arc jet.

The lifetime of an elliptical orbit satellite cannot be easily prediicted since the solar/lunar "jerks" make the orbit be a chaotic system. If you know the current state, you can forecast its behavior, but you cannot define an "end state" and define a unique path to get there. For AO-13, small changes in the initial launch and motor burn conditions could have led to the satellite crashing a couple of years ago, or they could have led to an orbit that would have allowed the satellite to live into the next millenium.

Regarding the "crash" date, several of us (including Victor Kuedelka in Austria, James Miller in the UK and I) have done independent "impact" calculation. We all agree that the "Chicken Little" date is in the first half of December. During its last month, it is likely that the satellite will begin tumbling and heating up, so it will probably become useless sometime in November.

Dave,
Who sent you the information? I would be interested in seeing it. Working on a balloon project over a year ago, I asked for the same info. of the group here and got nothing. Even contacted a couple of people at TAPR. No help. Some research on HDLC and TCP as well as studying some tranceiver chip specifications got me started. But I had to put a logic analyzer on a TNC to get the final answers. Kind of frustrating. From scratch, I have basic and 68hc11 code both for the CRC used in packet. Is there any published text on the subject?
Ken.

Source record: 22698

Dear all

I know this must appear like a silly question, but why launch lots of expensive sophisticated satellites every few years?

Why not send up one new, ultra simple satellite or possibly pairs each month? build them in a production line.

IE. operational life 6~18 months before re-entry, and make a few of them geostationary?!

Let's keep the budget to 5~15K pounds sterling EACH. Use redundant capacity in any launch vehicle....

That way we'd have plenty of capacity for all.....

Suggest spec.

Controlled by an pic-chip or 8bit cpu? 6502/1802/z80 etc...

most basic attitude control (Could a spray~can be used?), if any..one or two transponders for UHF/SHF (linear transponder? old tech but worth improving) etc. If the sat is geostationary and positioned for maximum exposure to the sun, then I assume battery requirements are reduced. Could cosmic radiation be used to provide electrical power?) etc. Could standard chassis be developed and mass~produced? I have often wondered if radioactive power sources have been considered, eg use a beta~emitter in a small electric pile/battery as used in pacemakers heart~regulators, these are very small, reliable and the radiation is minimal.

Has anybody considered reversible fuel cells, in sunlight use solar panels to electrolyses water into H and O2. When in darkness, convert into a fuel cell and produce electricity+heat+water again.

I would be very happy to donate personal funds for this kind of development (I could be asking for trouble here!)

632. NAVSPASUR Fence - 216.980 Mhz

Newsgroup: rec.radio.amateur.space
Date: 1996-03-28 00:00:00 UTC
From: bheaton@fibr.net
Message-ID: <315a5ea0.8907956@nimitz.fibr.net>
Source record: 22699

All,

I am looking for info regarding the NAVSPASUR fence operating
at 216.980 Mhz. I had been looking for info for the last couple
months and just saw a mention of it in Popular Communications. There
was some discussion (on DRIG) of experiments at using it to refine
elsets for OSCAR birds.

The article mentions transmitters in Texas (Kickapoo Lake I
believe), Alabama and Arizona. The only thing I have been able to
find thats even close is the AFSPACECOM PAVE PAWS phased array radar
system. Its sites are listed as Mass, Calif, Texas, and Georgia.
This is most likely a mircowave system, however.

I am interested in detecting satellites crossing the fence and
would appreciate any data available on the subject. If there is
enough interest I can try to put together a summary or possibly a FAQ
if one doesn't already exist. Thanks in advance for your assistance..

Hi again Geert!
I know that RIG members had the possibility to buy a rather cheap one as a kit - RIGsat-RX1, but at the time I know that a frien of mine tried to get one of these, but they did not sell any more kits because they didn't have any more MF-filters. You can still buy such filters, but they are VERY expencive. You could try to contact the RIG magazine editor by E-mail. His address is peter@ascotrig.demon.co.uk. The also have a homepage I think - I dont remember the address - I found It: http://www.bbc.co.uk/john_wxpics/rig/index.html
Another place to check for a really good RX is the one from Timestep, Box 2001, Newmarket CB8 8XB England. Tel. 0440 820040 fax 0440 820281. Their RX is very good, and the price is £185 +p&p £6

A suitable rx was also described in QST 1989(???) that one was built around the Plessy SL6640. I'm building this one now - the only problem is to get a cheap xtal filter. I have found an old 10.7MHz filter with 50kHz bandwith (??) in an old taxi tranceiver. I hope this one will work. I can supply you with drawing if you are interested. I suppose I could scan it

and send it via E-mail?

: Dear all

: I know this must appear like a silly question, but why launch lots of
: expensive sophisticated satellites every few years?

: Why not send up one new, ultra simple satellite or possibly pairs each
: month? build them in a production line.

: IE. operational life 6~18 months before re-entry, and make a few of them
: geostationary?!

: Let's keep the budget to 5~15K pounds sterling EACH. Use redundant
: capacity in any launch vehicle....

: That way we'd have plenty of capacity for all.....

: Suggest spec.

: Controlled by an pic-chip or 8bit cpu? 6502/1802/z80 etc...

: most basic attitude control (Could a spray~can be used?), if any..one or
: two transponders for UHF/SHF (linear transponder? old tech but worth
: improving) etc. If the sat is geostationary and positioned for maximum
: exposure to the sun, then I assume battery requirements are reduced.
: Could cosmic radiation be used to provide electrical power?) etc. Could
: standard chassis be developed and mass~produced? I have often wondered if
: radioactive power sources have been considered, eg use a beta~emitter in
: a small electric pile/battery as used in pacemakers heart~regulators,
: these are very small, reliable and the radiation is minimal.

: Has anybody considered reversible fuel cells, in sunlight use solar
: panels to electrolyses water into H and O2. When in darkness, convert
: into a fuel cell and produce electricity+heat+water again.

: I would be very happy to donate personal funds for this kind of
: development (I could be asking for trouble here!)

: Steve (a new novice member of Amsat UK)
: G7VFY
: Tel 0956-544202.

You have come in at one half of the problem of space business for
30 years. In terms of value for money you spend about half on the
satellite and half on the launch. With launches costing about
$4000 to $10000 a pound (sorry about U.S. units) then you build
satellites that cost about the same, and maybe pack as much goodies
into that payload. It does not make sense to make really cheap

satellites that are going to cost a lot to launch. The proposal you make is similar to the thinking behind Iridium and GlobeStar. Lots of small satellites in a constellation. However, after early low cost projections, their costs have risen back to the 1/2 and 1/2 regime. Your suggestions will not fly until the launch costs come down radically. In other words if you want to see such things in your lifetime you had better support efforts like NASA's X-33 to reduce the cost of launching into space by an order of magnitude.

I have a copy of SatTrack V1.0 from Manfred Bester, DL5KR.
It works very well on a vt100 terminal connected to a Sun 3/60.
Manfred is up to version 3.1 (3.5 due soon?) which runs on X.
I believe that SatTrack V1.0 is still available from
ftp://ftp.ucsd.edu/hamradio/sat/

Hi Tom,

It wasn't that I didn't know where to look, it was just that over here
in middle England it had been 10/10 cloud for over 14 days. However,
two clear nights Tuesday and Wednesday this week and as you say it is
quite a sight.

Mike:

Even though SatTrack has X Window Color graphics, you can compile the
software for usage without X Windows and then get pure VT100 or HP style text
output only. All that requires is changing one variable in the Makefile.
Give it a try, the latest version (V3.1) of the source code including the
most recent patches is available from the SatTrack web page at:

http://www.primenet.com/~bester/sattrack.html

This web page also shows examples of the text and graphics screens.

>From: "Stephan M. Anderman" <sanderman@delphi.com>
Subject: Albany, NY SAREX Contact Rescheduled

FOR IMMEDIATE GENERAL RELEASE Page 1 of 3

Preparations are nearly complete at Bethlehem Central High School for Friday morning's scheduled amateur radio contact with space shuttle astronaut Kevin P. Chilton. Several students at the Delmar school have already been through a "dress rehearsal", readying their questions for the Atlantis Commander.

The question and answer session has been planned for nearly three years by members of the Albany Amateur Radio Association in cooperation with NASA, the American Radio Relay League, and school officials. Bethlehem senior Geoff Phillips, himself a ham radio operator, suggested the contact to school's science department.

Four of the six Atlantis astronauts are also ham radio operators. Commander Chilton will use the same ham radio equipment aboard the shuttle to talk to the students that was used to establish communications with the Russian Mir space station and coordinated the docking of the two spacecraft over the weekend.

Technical preparations at the school are also approaching completion for the contact, which has now been re-scheduled for 6:58 AM Friday. A sophisticated amateur radio station, complete with computerized tracking equipment which automatically points an array of specialized antennas at the shuttle as it passes overhead, has been set up in the school's library.

Unlike last summer's Shuttle Amateur Radio EXperiment contact at the Schenectady Museum & Planetarium, this operation will use direct air-to-ground communications with Atlantis. David Jones of Albany, who is coordinating the technical issues for this

"SAREX" contact, notes that the Schenectady effort involved a telephone and satellite link as the shuttle flew over South Africa. On this mission, Atlantis will fly nearly directly overhead.

But as the Atlantis crew works on its mission objectives in space, its the amateur radio and educational aspects of the flight that seem to be attracting a lot of attention here on the ground. Several hams from the Bennington area, members of the Southern Vermont Amateur Radio Club, have been assisting Jones with assembling equipment and coordinating operations with NASA.

It's a rare opportunity for students to get a first-hand, hands-on experience with the space program. The mix of space travel and communications involve facets of mathematics, geography, astronomy, physics, computer science, and the communications arts. And excitement at the school is increasing as the time approaches.

The national news service "This Week in Amateur Radio", which originates from the Albany area, will carry the student's questions and astronauts answers live via satellite to hams across the US and Canada. WA3NAN, the ham station at the Goddard Space Flight Center in Greenbelt, Maryland, will transmit the contact worldwide on "short wave" frequencies. A UHF radio link from the school to a ham station in Stillwater will facilitate regional and national "broadcast" of the contact.

From Stillwater, the signal will be sent to a satellite uplink station near Knoxville, Tennessee and back to the Albany club's repeater in the Helderbergs. Locally, ham radio enthusiasts and scanner listeners can listen in on 145.17 and 145.19 MHz.

The Shuttle Amateur Radio EXperiment is sponsored by the American Radio Relay League, of Newington, Connecticut, AMSAT - the Radio Amateur Satellite Corporation, and NASA, and supported by the Federal Communications Commission.

END END END

Stephan M. Anderman, WA3RKB
ARRL Public Information Coordinator, Eastern New York Section
email: sanderman@delphi.com
packet: WA3RKB @ WA2UMX.FN32AW.ENY.NY.USA.NA
phone: 518/664-6809

Note: The contact will be carried in the Albany area on the Albany ARA KM2H repeater on 145.19 MHz and on the Troy ARA NY2U repeaters on 145.17 and 444.225 MHz. In addition, it can be heard throughout North America on the Anik E-2 commercial communications satellite at 107 degrees west longitude, transponder 18 (9B vertical), 5.8 MHz wide-band analog audio. As noted in the release, WA3NAN plans to air the contact on their usual HF frequencies. Coverage is now scheduled to begin at 6:40 AM EST on Friday, March 29th.

>From: mwcook@cris.com (Mike Cook - AF9Y)
Subject: Hyakutake Comet Radio Bounce Test Results

Hyakutake Comet Radio Bounce Test Results

Based on poor ionization at VHF, it appears that Hyakutake Comet bounce is doubtful. Never the less, last night I made a concerted effort. Here are the results:

- System used was my 2mtr EME station and the FFTDSP42 program. EME Signal echo detection S/N margin is 20+ dB with FFTDSP42 integration set to 1.

- For the comet bounce test, integration was set to 8 for a detection increase of 4.5 dB. Total system S/N EME echo margin was aprox 25 dB.

- A continuous 1500 watt, 144 Mhz carrier was transmitted for 45 Seconds. The receive period was 75 Seconds. Any reflection from the comet should have been visible as a line trace during a portion of the display receive window.

- Transmit offsets of 0, +1, +2, -1, -2 Khz were tried during the test period to allow for various doppler effects.

- After an hour of testing, no traces were seen. It is possible that some pointing error existed during the test since we had cloud cover and I could not do a visual validation.

- I used the "Home Planet" program and the latest
comet position within the Arcturus star group.
It would be nice if one of the astronomy programs
would provide AZ EL pointing information
for celestial objects. During the test period,
the EME array was moved over a +/- 10 degree range
in AZ and EL.

It looks like thunderstorms for tonight so it is doubtful
that I'll be able to make additonal tests for the perigee
night.

Details on the EME station and FFTDSP program used for the
test is available on my web page.

Also, try getting REAL95.ZIP from the AMSAT ftp site. It's designed
to run on an HP95LX palmtop.

Subject: Unix Satellite Tracking

I am looking for a text based satellite tracker for unix. I
heard that Sattrack was for Unix, but one needs to run x windows
to use it. I don't have x windows, and that is why I need something
text based.

Thanks in advance for any help.

Mike - KB8WPE

:
Sattrack is text based although in the last few releases it came
with a x-windows graphical display. Works fine. (at least the last
time I tried it.)

I have a copy of SatTrack V1.0 from Manfred Bester, DL5KR.
It works very well on a vt100 terminal connected to a Sun 3/60.
Manfred is up to version 3.1 (3.5 due soon?) which runs on X.
I believe that SatTrack V1.0 is still available from
ftp://ftp.ucsd.edu/hamradio/sat/

Space Horizons: A Summit on Emerging Applications, Missions, and Technology
Boston, Massachusetts, May 2-4, 1996

Sponsored by AeroAstro / Boston University Center for Space Physics /
Launchspace / National Space Society / New Space

The Space Horizons Summit is the first to address in a hands on, workshop setting, the fundamental changes now occurring in the way humans operate in and use space. We stand at a crossroads - In what directions can and will the space community proceed from here? For two days, experts, leaders, and visionaries from across a spectrum of disciplines in the space program and industry will meet in an interactive "think tank" to discuss emerging applications and markets, developing technologies, and the future of the space industry and community.

Our time is one of turmoil and redefinition in the space sector. The economics of space is changing. As space and defense budgets shrink, government and space industry are changing the way they do business. In addition, global competition has become a significant factor for the space industry. A growing market has already emerged in communications, small satellites, remote sensing, space biotechnology, and launch vehicles. Small and reengineered companies are proposing and enacting a myriad of new initiatives in these areas. At the same time, new terrestrial and space technologies are driving space activity towards new applications and methods.

Out of these changing budgets, needs, economics, and technologies will emerge the next generation of space applications, programs, and commercial ventures. You can just sit back and watch this new era unfold. Or you can help to create it.

The two day Summit will take place May 3 - 4, 1996, at Boston University and the Hyatt Regency Cambridge. In addition, a pre-summit seminar entitled, "New Approaches to Economics, Design, Development and Maintenance of Space Systems", will be held on May 2nd.

The Space Horizons Summit will gather some of the new space initiative's best minds and most visionary pioneers in an informal, creative setting to study and to uncover opportunities, ideas, directions, and possibilities for the future. Participants will be confronted with and discuss emerging opportunities for space applications in areas such as remote sensing, communications, science, mission support and education. The Space Horizons conference is unique in its interactive format, with numerous small working groups and interactive sessions to grapple with the challenges and opportunities facing the space community today.

At the conclusion of the summit, you will have gained a new outlook on many aspects of space:
- possibilities for viable space ventures and applications;
- potential new commercial space initiatives that the market will demand and support;
- improved understanding of developing technologies and ways to apply them to both emerging and established opportunities;
- knowledge and connections necessary to bring your concepts and ideas to reality;
- a visionary perspective on new ways of "doing space";
- an appreciation of how issues such as education, the media, and responsibility in space development can be advantageously integrated into space efforts;
- exposure to the thoughts and ideas of many of the brightest, most visionary leaders in space - and a chance to interact with them in an informal, problem-solving setting.

At Space Horizons you will work closely with leaders from all segments of the space community - industry leaders, technical innovators and visionaries, investors and market experts, educators, government planners, university researchers - an interdisciplinary mix representative of all aspects of space activity.

The pre-summit seminar, led by three respected leaders in the fields of space transportation and microsatellites, will be held May 2nd. Starting with a clean sheet of paper, this special one-day course begins surveying the state of the art in minimum mission technologies. It will examine the approaches available to space mission planners and developers to achieve minimum cost and therefore to enable a new generation of space initiatives. The result is a dramatic savings over conventional system designs coupled with enhanced reliability and a program structure designed to be attractive to sources of capital. The approaches demonstrated are equally applicable to scientific, remote sensing and military one of a kind and cluster space systems.

The conference and seminar provides an opportunity to seed contemporary space activity with a new generation of initiatives and applications. If you have an interest in innovative ideas, an interest in the future of space, creative visions, and new technologies, this conference is for you. Weï¿½re looking forward to your participation at the Space Horizons Summit - helping to plot a new course in space.

Registration information is at the end of this message.

Space Horizons Summit Schedule
(subject to change)

Thursday, May 2 (optional)
8:00 AM Continental Breakfast and Morning Registration

9:00 AM New Approaches to Economics, Design, Development, Deployment, and Maintenance of Space Systems: A workshop on minimizing the cost of space transportation, space systems and operations, and on maximizing economic returns from space.

Rick Fleeter, Ph.D., President, AeroAstro, LLC.
Marshall H. Kaplan, Ph.D., Chairman, Launchspace, Inc.
Steve Newman, MBA, President, Launchspace, Inc.

Friday, May 3
8:00 AM Continental Breakfast and Morning Registration

9:00 AM Convocation and Keynote Speaker: Colonel Simon "Pete" Worden, commander, 50th Space Wing, Air Force Space Command

10:00 AM
- Access to Space, Dr. Marshall H. Kaplan, Chairman, Launchspace, Inc.
- Scientific Applications, Dr. Supriya Chakrabarti, Professor, Boston University Center for Space Physics

12:00 PM Lunch

1:30 PM
- Remote Sensing Applications, Dr. John Mustard, Professor, Brown University Department of Geological Sciences
- Governmenti¿½s Role in the Future, Mr. Alan Ladwig, Associate Administrator, NASA Policy and Plans

3:45 PM
- Media and the Public, Ms. Lori Garver, Executive Director, National Space Society
- Opportunities for Small Countries, Mr. Sven Grahn, Swedish Space Corporation

5:45 PM Reception and Mixer

Saturday, May 4
8:00 AM Continental Breakfast

9:00 AM
- Next Generation Communications Concepts, Dr. James Stuart, Vice President for Space Infrastructure, Teledesic Corporation
- Robotics Applications, Dr. Red Whittaker, Director, Field Robotics Center, Carnegie Mellon University

11:15 AM
- Education and Outreach, Dr. Paul J. Coleman, Jr., President, Universities Space Research Association
- Financing Space Ventures, Mr. Robert D. Leppo, Director, Belisarius Fund

1:15 PM Luncheon and Speaker

2:30 PM
- Responsible Space Development, Mr. Leonard David, Space News Correspondent
- Future Space Industries, Mr. Charlie Chafer, Founder, Celestis Corporation

To register, call Spectrum Management Group at +1 301 353-0022.

TAPR _might_ have a few TrakBox kits left. I sent them some about a week ago.

Why reinvent the wheel? These are used the world over and most popular
software used on the birds support it.

IMPORTANT -- PLEASE POST ASAP !!!

The Satellite Communications Demonstration scheduled for 8:00 AM on 30-MAR-96 at Huntington Town Hall has been cancelled due to extenuating circumstances. Those interested in re-scheduling this event should contact Ken Ernandes, N2WWD via mail message or check in to the AMSAT Satellite Net Tuesday evening(s) at 8:00 PM -- WA2SNQ repeater, 147.075 MHz (+600 KHz split), 4Z PL (136.5 CTCSS). I regret any inconvenience this may cause.

652. Mac Ham Users Group

Newsgroup: rec.radio.amateur.space
Date: 1996-03-30 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-3003960409530001@wd1v.mv.com>
Source record: 22619

"Macnet Roster" (ver. 739) has just been updated and is now a stand-alone application! The version number = the number of hams using Macs.

"Macnet Roster" lists:

o CALL SIGN @ HOME PBBS
o FULL NAME
o ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

of every known amateur radio operator in the world that uses a Mac computer.

You can use "Macnet Roster" to find other Mac users that you can then communicate with directly. Compare notes on software, applications, ideas, hints and kinks, and make new ham friends that use the same computer you do. (You already know how cool you are - imagine accessing "the rest of us"!)

If you'd like the latest "Macnet Roster":

Send me a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER".

Or connect to my home page via the WWW

http://www.mv.com/ipusers/wd1v

Put YOUR INFO (via EMAIL or disk using TEACH TEXT) if you'd like to be included in the "Macnet Roster" or send an update to your stats to me via pkt or email anytime.

Just a reminder that these pages have recently been updated.

http://www.innotts.co.uk/~asperges/

If you have a particular interest that is not covered, how about
writing for them yourself and I will include it, with proper credits
etc?

which will do
multiple sats in a single window or multiple window, or
all kinds of combos thereof. It also has logging and call lookup capability.

The authors also clain it is compatible with KC Tracker.
It also has some dipole antenna modeling capabilities and some
basic propagation tools.

I think they are asking 50 bucks for it.

It is available on the web, but I seemed to have misplaced the URL....

73,

Bruce, WB4YUC

Dear all

I know this must appear like a silly question, but why launch lots of expensive sophisticated satellites every few years?

Why not send up one new, ultra simple satellite or possibly pairs each month? build them in a production line.

IE. operational life 6~18 months before re-entry, and make a few of them geostationary?!

Let's keep the budget to 5~15K pounds sterling EACH. Use redundant capacity in any launch vehicle....

That way we'd have plenty of capacity for all.....

Suggest spec.

Controlled by an pic-chip or 8bit cpu? 6502/1802/z80 etc...

most basic attitude control (Could a spray~can be used?), if any..one or two transponders for UHF/SHF (linear transponder? old tech but worth improving) etc. If the sat is geostationary and positioned for maximum exposure to the sun, then I assume battery requirements are reduced. Could cosmic radiation be used to provide electrical power?) etc. Could standard chassis be developed and mass~produced? I have often wondered if radioactive power sources have been considered, eg use a beta~emitter in a small electric pile/battery as used in pacemakers heart~regulators, these are very small, reliable and the radiation is minimal.

Has anybody considered reversible fuel cells, in sunlight use solar panels to electrolyses water into H and O2. When in darkness, convert into a fuel cell and produce electricity+heat+water again.

I would be very happy to donate personal funds for this kind of development (I could be asking for trouble here!)

>This is most likely a mircowave system, however.

70cm actually. PAVE PAWS is an early warning radar. It is frequency agile and uses a steered phased array at very high power. It makes a raucus buzzing noise. The one in Georgia (Robbins AFB) is inactive, and likely to stay that way. The high ERP was determined to be actively dangerous to nearby aircraft, like the SAC B-52 bombers taking off and landing at Robbins. The other sites may or may not still be in use.

NAVSPASUR is a different animal. It is a CW signal (not Morse, a real continous carrier) on 216.983 MHz aimed straight up in a fan pattern aligned with a line of latitude, IE east-west. There are three transmission sites, Jordan Lake AL, lat 32.659 long 86.264, Kickapoo Lake TX, lat 33.558 long 98.7367, and Gila River AZ, lat 33.11 long 112.03.

Phase slaved interferometers at remote receive sites give 3D position, and doppler measurements give range rate. With this information, an orbit for the object can be calculated. Because of the way the sites are staggered longitudinally, any satellite with an inclination of 33 degrees or more will show up on successive orbits through 2 or more of the fences. That allows the initial orbital element set to be refined.

You can use these signals to check and correct satellite element sets. Use your satellite prediction program to find out the time the satellite should cross one of these latitudes and be in a mutual footprint with your station and one of these sites, aim your antennas at the predicted position, and measure the actual AOS, LOS, and doppler of the reflected signal. The offset of this actual data from the predicted data can then be used to correct the element set.

Of course if the satellite has an active beacon, and you know its
frequency precisely, you can do the same thing without resort to
NAVSPASUR. It is most useful for locating passive targets.

660. 2 axis stepping motor for tracking

Newsgroup: rec.radio.amateur.space
Date: 1996-03-30 00:00:00 UTC
From: timhynde@ix.netcom.com
Message-ID: <4jjhmj$6jf@dfw-ixnews2.ix.netcom.com>
Source record: 22627

Hello:

I have two stepping motor drives that I would like to use for
sattelite tracking. I need an interface to a tracking program. I have
the following available in the motor drives.

* BASIC programming language, can do most math funtions.
* 16 digital inputs (I can read them as a binary word as well)
* RS-232 (the drive has left,right,mid string funtions so I can strip
any incomming strings for appropriate data.)

Any thoughts on a sat tracking program? One that outputs the AZ/EL
information serially would be ideal.

Tim Hynde, ka8ddz

Gary,

Thanks for the info. I managed to pull a data sheet on PAVE
PAWS from the USAFSPACECOM server, but was coming up black on
NAVSPASUR. Another ham sent me a bunch of the text of a 1991
discussion about it that I remembered. Its got some references that I
need to look up, but I should be ready to copy pings shortly.

Now this is interesting. There was some discussion of slave receiver
sites. I don't suppose anyone has any info on locations?

666. * * * AFFORDABLE QSL CARDS * * *

Newsgroup: rec.radio.amateur.space
Date: 1996-03-31 00:00:00 UTC
From: MMcanally@gnn.com
Message-ID: <4jmklc$fce@news-e2b.gnn.com>
Source record: 22633

After some checking, I found out that QSL cards cost anywhere from $70.00 to $450.00 per 1000 cards to be printed up. I also found out that you are pretty limited to the color of card, artwork and color of ink to choose from. I have been printing cards for my ham

friends for some time now and I have been encouraged by my friends

to branch out and advertise a little.

I can print 1000 cards with black ink for only $50.00. Why should you order your cards from me? Because $50.00 is it! No shipping charges, no setup charges, no hidden costs. PLUS...you have your choice of 13 card colors, unlimited artwork, and you can have up to FIVE different layouts per order. Want color ink? For example, do you want a red, white and blue US flag on your cards? That would only be $65.00 per 1000, with 13 card colors to choose from,

up to FIVE different layouts, and unlimited artwork in black or colors.

Your card color choices are white, blue, yellow, pink, green, ivory, peach, gray, and the following eyepopping flourescents: yellow, pink, green, blue, and red. Artwork is too numerous to list all designs here, but just some examples would be an ARRL logo, ARES logo, SKYWARN logo, flags of all 50 states, maps of all 50 states, antennas and radios, flags and maps of US territories and foreign countries and 1000's more...
Custom artwork available at NO ADDITIONAL CHARGE!!! Just tell me what you want!!!

Reply via private email for a FREE sample snail mailed to you today!

To place an order call Mark at (904) 626-2450 or FAX (904)626-7686 or you can mail check or money order to:

First of all, its now called NAVSPACECOM fence (since late 1993) but
we still call it the SPASUR fence (grin)

A person from Florida (the name escapes me) had used the Lake Kickapoo
transmitter for following satellites. Again, I'll have to look up the
name at work on Monday.

> The article mentions transmitters in Texas (Kickapoo Lake I
>believe), Alabama and Arizona. The only thing I have been able to
>find thats even close is the AFSPACECOM PAVE PAWS phased array radar
>system. Its sites are listed as Mass, Calif, Texas, and Georgia.

The Fence has 3 frequencies:
Gila River (Phoenix) Arizona - 216.97 MHz
Lake Kickapoo (Archer City) Texas - 216.98 MHz
Jordan Lake (Wetumpka) Alabama - 216.99 MHz

receivers throughout the southern US (too many to mention here)

> I am interested in detecting satellites crossing the fence and
>would appreciate any data available on the subject. If there is
>enough interest I can try to put together a summary or possibly a FAQ
>if one doesn't already exist. Thanks in advance for your assistance..

Well, I'm in development of a web page (one of these days they'll put
it on line!)

If you want more details, let me know. I work for the fence on a daily
basis. E-mail me at the address below.

David Perrussel

669. RS-12 Tracking program

Newsgroup: rec.radio.amateur.space
Date: 1996-04-01 00:00:00 UTC
From: red5or7@aol.com
Message-ID: <4jp8eg$p0g@newsbf02.news.aol.com>
Source record: 22636

I apologize in advance if this is a dumb question, but are there any on-line sources for tracking programs? Specifically, I enjoy using RS-12, and would like to have a program on my PC that would allow me to track the bird. ANY help anyone can provide is greatly appreciated! Thank you, Scott N7LRA.

In article <4jlm9j$ks8@nms.telepost.no>, skontorp@telepost.no (Karl Jan Skontorp) says:
>
>Hi!
>Can anyone confirm that JVFAX with the following configuration is working
>ok?
>I use an interface - syncronous-parallell connected to LPT1, and JVFAX is
>configured with 'BidPrintIRQ' with correct address and interrupt.
>I only get two different gray levels, and I wonder if JVFAX with this
>configuartion have been tried out by anyone else?
>
>73's de Karl Jan LA3FY
>
I am using the A&A NOAA wefax decoder feeding the printer port with
JVFAX 7.0. The A&A has 8bits of output, but I have never been able to
get a standard printer port to accept data on the I/O pins. I have had
great succes using the 5 status inputs(for 2^5=32grey scale)on several
different pc/printer card combos (I have modifed an early "real IBM"
so that I get the full 8bits. and it is nice but it was a real pain to
do the mod).
To use an data output pin as an input pin is a bit tricky. Some older or
cheaper cards just do not handle incoming data very well. There are
about 3 different "style" cards, and each requires a slightly different
method to enable reading data. A friend has an add-on 8bit A>D converter
and he just about had to write a different IO for every different pc or
card. I have never been 100% sure that the JVFAX program can actually
read data using any and all cards. I have suspected that it works great
with some cards but not with any that I have tried.
In the early stages of "debuging" the A&A card I used a DB25 with LEDs
(for each data bit) to show that the "demodulator" was working properly.
Good luck and good viewing.

(I sure hope I got this constrained to AMD only!)

If you're a ham and you work at AMD, please read this!

We're starting an amateur radio club at AMD Austin. If you're in Austin, send me (or Curtis.Doss) e-mail for more info. We're just getting organized to ask AMD for space and support, so your interest is important.

If you're not in Austin, we'd like to know about any non-Austin AMD ham clubs (or hams, for that matter).

678. Radio Telemetry Module?

Newsgroup: rec.radio.amateur.space
Date: 1996-04-02 00:00:00 UTC
From: mkudra@cris.com
Message-ID: <4jscho$fqc_001@news.cris.com>
Source record: 22645

We are searching for a module or small board to provide real-time telemtry transmissions from high-powered model rockets.

This unit would need to be:

a) Licensed or legitimately usable unlicensed in several countries,
b) Interfaceable to an altimeter/accelerometer CPU,
c) capable of transmissions to a range of 50K feet.

Any leads will be greatly appreciated.

BTW, we are not 'radio-knowledgeable' people, so if there is a more suitable newsgroup to target, please let us know.

Thanks,
Malcolm

1996 AMSAT Annual Meeting and Space Symposium
Call For Papers

Holiday Inn, City Center
Tucson, AZ
November 8-10, 1996

The 1996 AMSAT Annual Meeting and Space Symposium will be held on
November 8-10, 1996 at the Holiday Inn, City Center in Tucson, AZ.
This is the first call for papers to authors who wish to submit papers
for this event. As always, the scope of the papers should be on topics
of interest to the amateur satellite service.

Topics may include, but are certainly not limited to:

The Life and Times of AO-13
Building a Phase-3D Ground Station
Phase-3D Construction Topics
DSP-93 Integration
AMSAT Field Operations
What's Next for AMSAT After Phase-3D?

We also would like to solicit topics from the AMSAT community. In
other words, what topics would YOU like to see presented at this year's
Annual Meeting?

Abstracts from authors should be submitted by June 15, 1996. Final
versions of all papers should be received by August 15, 1996.

Submissions and inquiries should be made to Dave Burnett, WD8KRV:

By Internet: wd8krv@amsat.org

By Mail: G. D. Burnett
4809 E. Pima #223
Tucson, AZ 85712

Information about the Annual Meeting home page will be included in a
future announcement. We look forward to seeing you at the Annual Meeting!

73,
Dave Burnett WD8KRV
wd8krv@amsat.org

Someone was looking for a 137 MHz receiver for weather satellites. It was last week sometime and I don't recall who it was. Anyway Hamtronics makes a board level receiver for 137MHz and it's available kit or assembled.

684. Re: Radio Telemetry Module?

Kamtronics have just brought out a telementry module to go with their range of Packet TNC. Apparently this unit has a number of a/d inputs etc and can be used, with a suitable sensor to measure barometric pressure and acceleration. Ideal for that little ballistic missile project you've been working on.

Steve/G7VFY.

The Remote Image Group (RIG) do a pcb as well. Ask Peter Wakelin about it.

How about building out own Rockets?....perhaps not....!

687. TAPR GPS Group Purchase

Newsgroup: rec.radio.amateur.space
Date: 1996-04-04 00:00:00 UTC
From: Greg Jones <wd5ivd@tapr.org>
Message-ID: <4jv4st$jbm@uunews.computize.com>
Source record: 22654

TAPR offers group GPS purchase 4/1/96

TAPR working with Bob Bruninga, WB4APR, will be making a group purchase
on
Garmin 20 GPS units.

For full details on the purchase as well as information regarding the
unit,
please see the following web page http://www.tapr.org/gps

The price will be:
$165.00 US for members of TAPR
or
$175.00 US for non-members

This kit will include:
* Garmin GPS-20 (MultiTrac8 sensor) engine (1.83" x 2.74" x .45")
The Garmin GPS-20 is similar to the Garmin GPS-45

* RF pig tail with connector for unit
(one end is the MCX male connector
and the other end will be non-connected - see below)

* power/data cable with connector shell and pins
(The connector is a subminiature PCB edge connector
and will need to be built - see below)

* Documentation

TAPR will be taking orders for 50 units, which is the minimum purchase.
Once 50 units have been purchased TAPR will order the Garmin units.
TAPR will deposit money when the units are ordered from Garmin and ship
when the units arrive from Garmin. It is expected that the demand will
be high, thus a short period should be required to receive the 50 orders.

Please note: This is not an enclosed/sealed unit. It is assumed that
the purchasers will be installing the unit in another enclosure for normal
and/or experimental operations.

No 10% Discount for TAPR Members. Due to the nature of the purchase,
the $165 purchase price for TAPR members represents the membership
discount.

If you would like to order one of these units, you can
e-mail tapr@tapr.org,
phone (817) 383-0000, or
fax (817) 566-2544.

Office Hours: Tuesday - Friday 9am - 12pm, 3pm - 5pm Central Time

These units will be useful with current APRS software and the upcoming TAC
(Totally Accurate Clock) kit that Tom Clark, W3IWI, has begun discussing with TAPR to do as a kit in the future. For more on the TAC project check: ftp://aleph.gsfc.nasa.gov/GPS/totally.accurate.clock/

Questions concerning the unit and details on the buy will be handled on the TAPR APRS Special Interest Group list. To subscribe,
send e-mail to:
listserv@tapr.org.
In the message type
subscribe aprssig YourFirstName YourLastName.
The server will then send you a message back. Announcements on the status of the shipment will be made to the TAPR APRS SIG and TAPR-BB lists.

Shipping and Handling
---
* Shipping and Handling within the US will be $7.00 US
by UPS Ground unless otherwise requested by purchaser.

* International Shipping will need to contact the TAPR office and get a quote on the shipping to your country. TAPR uses International Express Mail, unless the purchaser requires something else.

688. Wanted:Transverters

Newsgroup: rec.radio.amateur.space
Date: 1996-04-05 00:00:00 UTC
From: Bootlegger@msn.com
Message-ID: <00001ff1+000008e2@msn.com>
Source record: 22655

Wanted:

Transverters to be used with my Yaesu FT-1000MP.
I am looking for any FTV-107R or FTV-707 transverters
or anything that will put me on 6 meters, 2 meters or
70 centimeters. I would also like to find any Microwave
Modules transverters that I could use too. Any suggestions
for 6 meters would be appreciated too. Contact Bob N9MSS
at (618)939-7581 or e-mail at Bootlegger@msn.com

Actually, STSPlus does track multiple satellites (up to 32 at a time).

From the main menu, press [F10] [F3] then [F2] repeatedly until it shows
the "Both" or "Sats" setting for "Display TDRS and real time satellites."

Took me about 2 months until I found out about it. BTW, current ver is 9607.

690. NORAD Two-Line Orbital Element Sets (TLE788)

Newsgroup: rec.radio.amateur.space
Date: 1996-04-05 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4k46mr$5k8@blackbird.afit.af.mil>
Source record: 22657

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

691. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1996-04-05 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4k46qo$5kl@blackbird.afit.af.mil>
Source record: 22658

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

Cross-posted to: rec.radio.amateur.equipment,rec,radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc.,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.noncomm,rec.radio.scanner,rec.radio.shortwave

A Stand alone IBM compatible Broadcasting Radio Station Database Program for longwave, Mediumwave, and Shortwave. Over 4,000 records included already. Completely, read/write and update-able.

If you would like a copy, send your Mailing Address - the one you receive letters with - and your E-mail address. The program will be sent back via E-mail to you within 24 hours.

Your mailing address will be used to send you further details on a full featured database program called Voyageur. All information is confidential.....!

Hope to hear from you.

693. Re: Tracking Multiple Sats Program

Newsgroup: rec.radio.amateur.space
Date: 1996-04-06 00:00:00 UTC
From: argon@onramp.net
Message-ID: <argon-0604960707400001@argon.onramp.net>
Source record: 22660

Try SkyChart 2000. It will import nasa files and track zillions of satellites. It will do track in realtime and plot the course. It comes with a demo file that tracks all of the GPS's. It's shareware and findable on line.

Kyle

You can find AO-13 pass predictions at

http://www.acs.ncsu.edu/scripts/HamRadio/sattrack.perl

and you can just type in your QTH and select a satellite

There was a posting of satalittes transmitting in the 150 mhz . would you e
mail them to me thankls

698. Satellite Tracking Program for XT

Newsgroup: rec.radio.amateur.space
Date: 1996-04-06 00:00:00 UTC
From: Stephanie Steele <kc7dba@primenet.com>
Message-ID: <31675328.4497@primenet.com>
Source record: 22665

I have a friend that just acquired an XT and would like to track satellites. Can someone recommend a program that will work on this machine with CGA Monitor. Thanks in advance for any assistance.

699. DSP2232 or DSP-93

Newsgroup: rec.radio.amateur.space
Date: 1996-04-07 00:00:00 UTC
From: bsmith@msn.com
Message-ID: <4k7fha$q97@news.internetmci.com>
Source record: 22567
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.digital.misc

OK, and greetings. Trying to put together an automated SAT sattion. Have had the DSP-93 for about 9 months now and trying to get things going. Have the PACCOMM TNC and thought loading PSK and FSP modems would be a lot easier than it seems to be.

Also, at least on my DX cluster @ 9600 - I seem to be getting much better throughput on my MFJ/G3RUH combo then on the DSP-93 using the FSK18 modem. I have the thing tuned for 1Vpp input so I think it is tuned as well as possible. Using an ICOM 820H BTW.

Here's my question(s):
Should I get a DSP2232?
Will the TAPR TNC do a better job of Swapping modems and loading OBJs.
How does the 2232 compare to the DSP-93 or MFJ-G3RUH interms of performance - don't want to shell out a grand and go backwards.

Thanks in advance for any advice or ideas you may have.

73 de N3FTU, Bob

700. Radio Meteor Obs. Bull. March 1996: no Hyakutakids

Radio Meteor Observation Bulletin No. 32 April 1996

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East),
elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA, Bratislava
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

March 1996

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

```

- switch to summer hour during the night of March 30 - 31: local time
= UT + 2 hours

Maurice De Meyere / Chris Steyaert

Observer: Werfried Kuneth
Location: Villach, Austria (13 53' E, 46 37' N)
Antenna: dipole with reflector, direction east.
Receiver: AR-8000 , SSB mode, Narrowband passband filter, no preamplifier.
Frequency: 59.250 MHz
Transmitter: 150 kW TV video carrier
in Bucaresti, distance 950 km, east direction.
Observing method: the audio signal is fed into a real time FFT display
(FFTDSP38 program from AF9Y) on the PC where 640 channels of 2Hz width
are recorded and stored continuously. Every meteor reflection produces
a distinct whistle, which is recorded easily by the real time FFT
program in .GIF pictures of 200 seconds each.
From the 1280 Hz wide received picture only one channel of 40 Hz width
is used for meteor identification, the other nearby "channels" are used
to monitor interference, which can be identified easily. If any
interference occurs, the whole 200 second recording of one frame is
skipped.

The following figures show the total length of the meteor reflections
during one hour, expressed as percentage. The number here shows
10 times this value. (e.g. 100 means 10 percent).

UT | 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30

Notes:
. blank value means no data available or interference.
. local time conversion: one hour ahead of UT (06h00 UT is 07h00 local)
until March 30, 1996.
. Nothing happened (related to C/1996B2 Hyakutake), at least during my
(daytime) observing time.
Remarkably low activity, sometimes there have even been some
hours with nearly no strong (15+ seconds) reflection!
. see also: http://www.net4you.co.at/user/kuneth/info.html

Werfried Kuneth

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 30 degs
Antenna amplifier: 10dB gain, smallband resonance lambda/4 antenna filter.
Frequency: (1)=66.29 Mhz (signal) and (2)=65.3 Mhz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anticoincindence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ingition motors, etc).
Further information:

see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.

2. ANNOUNCEMENT

Geir Laastad/LA6LU invites to try his beacons for meteor scatter purposes:

Call MHz Antenna Direction ERP mAsl QTH Status

LA4TEN 28.211 Vertical Omni 250W 30 JP20LG QRV 24h
LA4VHF 144.890 2 * 8 el Yagi 0 degr. (North) 380W 30 JP20LG QRV 24h

(Located on the island Sotra, 60 15'36" N - 05 04'06" E)

SWL Reports is welcome! All reports via mailed QSL's will be QSL'ed
back with the beacons QSL card!

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio
meteor scatter observations and data reduction. It started in August 1993
in order to spread rapidly the Perseid results via E-mail. Since then, it
has appeared monthly, and has gradually been expanded.

Typically it contains: summaries of recent observations, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or unsubscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

From what I understand they are asleep after 2000UTC. At least thats the
time as of a few months ago.

I have set up a web page that links to verious areas on the internet. My home page will allow you to print out a petition to send to your senators. At this time I do not have the House of Representatives listed ... but we can start withthe senate.

To give you a breif overview ... A study of Near Earth Objects was proposed by several top NASA astronmers that would cost a mere $50 million of NASA's $7 Billion dollar budget. This study would withint 10 years track with relative assurance 95% of all the object that pose a threat to Earth. With operating expenses of $10million per year after the initial setup. This would also give us enough time to do something about a potential threat. This project was rejected due to budget constraints.

You can help by writing and calling your congressional representatives and telling them you want this funded. Please consider doing so as this would be in all our best interests.

Thank you: http://members.aol.com/netstryder

706. Help: altitude measuring device for ham balloon

Newsgroup: rec.radio.amateur.space
Date: 1996-04-07 00:00:00 UTC
From: acc@pobox.com
Message-ID: <4k97g8$avp@news.mountain.net>
Source record: 22574

Me and a few of the local hams are putting together an Amateur Balloon

We are in the fist stages of equipment design and I'm the lucky (or is that unlucky) one who gets to build the instrument package. For the first flight we are going to use a Basic Stamp (I or II not sure yet) to send telemetry and collect data from onboard sensors.

I have completed the temperature sensors and i am looking for a way to determine the altitude of the balloon (low cost needed) I have heard of a few chips or rather modules by motorola that do this. If anyone can help we would be most greatful.

707. AO-27 Operational?

Newsgroup: rec.radio.amateur.space
Date: 1996-04-07 00:00:00 UTC
From: Brian Webb <102670.1206@CompuServe.COM>
Message-ID: <4k99d1qds1@mhafn.production.compuserve.com>
Source record: 22575
Cross-posted to: aus.radio.amsat,de.comm.ham,rec.radio.amateur.misc,rec.radio.amateur.space,uk.radio.amateur

Yesterday (Saturday 07 APR) I tried to receive the AO-27 downlink on 436.800 MHz, but didn't hear anything. I listened from 0900 local time to 1800 using a Radio Shack PRO-2006 scanner in FM narrow mode. The receiver was programmed to search from 436.750-436.850 MHz in 5 KHz increments. The antenna was an outdoor sloping dipole for 35 MHz (it works from 30-950 MHz). Also, my squelch was set very low so a weak signal would break squelch.

Any idea what the problem is?

Brian Webb, KD6NRP

I found Traksat 2.8 very good. I think the AMSAT-NA site still has it. 2.8 is the last version that works with an XT. A co-processor (about $10 at swap meets) makes it run pretty smooth. In fact I'll send him/her this co-processor I have, I doubt I'll be setting up any XTs soon.

Actually AO-27 was working quite well on Saturday April 7. I was able to make
contact with G6HRH from New England.

What I had different was a better receive system using an 11 element yaga
tracking by hand with an 18db preamp. It does not put out a strong signal
you really need to get as much gain as possible to hear it. If i'm 30 degrees
off with the beam I don't hear it.

Get a good antenna system and some tracking software and give it another try
its lots of fun

Bill

Greetings,

The last version of Traksat that works on an XT is 3.03, I have it running
on an old XT i have.

The fastest satellite traking program I have seen on an XT is called
QUIKTRAK, but you have to enter all the Keps manually in the program.

Good listening!

Gilles Letourneau

Date: 1996-04-09 00:00:00 UTC
From: Richard David Glueck <glue9600@spacelink.msfc.nasa.gov>
Message-ID: <Pine.SOL.3.91.960408211245.11215B-100000@spacelink>
Source record: 22587

Does anybody out there have a plan for building the 2 meter FM antenna
that the shuttle crews place in the window of the orbit for SAREX contacts?
I am hoping to build one for a project at my school.
-Dick, N1MDZ

I am new to scanning the space frequencies and would like to know
if anyone has a listing of the space shutle frequencies and/or
freqeencies for the space station Mir. Any e-mail's would be greatly
appreciated
Thanks in advance

722. Re: Satellite Tracking Program for XT

I think STS-Plus will work I'm not sure though. Get it at
ftp.amsat.org
Hope this helps you out

Hi!
A quadrifilar helix is described in 'THE ARRL SATELITE EXPERIMENTERS
HANDBOOK'. One for WXsats is alos described in last issue of RIG journal
(RIG=Remote Image Groupe in Engalnd try their hompage
??rig-uk.demon.co.uk??)

For quadrifilar helical antenna plans, see Martin Davidoff's book, "Satellite Experimenter's Handbook," in the chapter on antennas. The book is published by the ARRl.

730. Space Horizons conference, May 3-4, Boston-- new speakers added

Newsgroup: rec.radio.amateur.space
Date: 1996-04-09 00:00:00 UTC
From: David_Joshua_Goldstein@brown.edu
Message-ID: <4ke4rj$r9n@cocoa.brown.edu>
Source record: 22597

Take a look: Additional speakers and moderators have been added, including Thomas Rogers, President of the Space Transportation Association...

Space Horizons: A Summit on Emerging Applications, Missions, and Technology
Boston, Massachusetts, May 3-4, 1996

Sponsored by AeroAstro / Boston University Center for Space Physics / Launchspace / National Space Society / New Space

The Space Horizons Summit is the first to address in a hands on, workshop setting, the fundamental changes now occurring in the way humans operate in and use space. We stand at a crossroads - In what directions can and will the space community proceed from here? For two days, experts, leaders, and visionaries from across a spectrum of disciplines in the space program and industry will meet in an interactive "think tank" to discuss emerging applications and markets, developing technologies, and the future of the space industry and community.

Our time is one of turmoil and redefinition in the space sector. The economics of space is changing. As space and defense budgets shrink, government and space industry are changing the way they do business. In addition, global competition has become a significant factor for the space industry. A growing market has already emerged in communications, small satellites, remote sensing, space biotechnology, and launch vehicles. Small and reengineered companies are proposing and enacting a myriad of new initiatives in these areas. At the same time, new terrestrial and space technologies are driving space activity towards new applications and methods.

Out of these changing budgets, needs, economics, and technologies will emerge the next generation of space applications, programs, and commercial ventures. You can just sit back and watch this new era unfold. Or you can help to create it.

The two day Summit will take place May 3 - 4, 1996, at Boston University and the Hyatt Regency Cambridge. In addition, a pre-summit seminar entitled, "New Approaches to Economics, Design, Development and Maintenance of Space Systems", will be held on May 2nd.

The Space Horizons Summit will gather some of the new space initiative's best minds and most visionary pioneers in an informal, creative setting to study and to uncover opportunities, ideas, directions, and possibilities for the future. Participants will be confronted with and discuss emerging opportunities for space applications in areas such as remote sensing, communications, science, mission support and education. The Space Horizons conference is unique in its interactive format, with numerous small working

groups and interactive sessions to grapple with the challenges and opportunities facing the space community today.

At the conclusion of the summit, you will have gained a new outlook on many aspects of space:
- possibilities for viable space ventures and applications;
- potential new commercial space initiatives that the market will demand and support;
- improved understanding of developing technologies and ways to apply them to both emerging and established opportunities;
- knowledge and connections necessary to bring your concepts and ideas to reality;
- a visionary perspective on new ways of "doing space";
- an appreciation of how issues such as education, the media, and responsibility in space development can be advantageously integrated into space efforts;
- exposure to the thoughts and ideas of many of the brightest, most visionary leaders in space - and a chance to interact with them in an informal, problem-solving setting.

At Space Horizons you will work closely with leaders from all segments of the space community - industry leaders, technical innovators and visionaries, investors and market experts, educators, government planners, university researchers - an interdisciplinary mix representative of all aspects of space activity.

The pre-summit seminar, led by three respected leaders in the fields of space transportation and microsatellites, will be held May 2nd. Starting with a clean sheet of paper, this special one-day course begins surveying the state of the art in minimum mission technologies. It will examine the approaches available to space mission planners and developers to achieve minimum cost and therefore to enable a new generation of space initiatives. The result is a dramatic savings over conventional system designs coupled with enhanced reliability and a program structure designed to be attractive to sources of capital. The approaches demonstrated are equally applicable to scientific, remote sensing and military one of a kind and cluster space systems.

The conference and seminar provides an opportunity to seed contemporary space activity with a new generation of initiatives and applications. If you have an interest in innovative ideas, an interest in the future of space, creative visions, and new technologies, this conference is for you. Weï¿½re looking forward to your participation at the Space Horizons Summit - helping to plot a new course in space.

Registration information is at the end of this message.

Space Horizons Summit Schedule
(subject to change)

Thursday, May 2 (optional)
8:00 AM Continental Breakfast and Morning Registration

9:00 AM New Approaches to Economics, Design, Development, Deployment, and Maintenance of Space Systems: A workshop on minimizing the cost of space transportation, space systems and operations, and on maximizing economic returns from space.
Rick Fleeter, Ph.D., President, AeroAstro, LLC.
Marshall H. Kaplan, Ph.D., Chairman, Launchspace, Inc.
Steve Newman, MBA, President, Launchspace, Inc.

Friday, May 3
8:00 AM Continental Breakfast and Morning Registration

9:00 AM Convocation and Keynote Speaker: Colonel Simon "Pete" Worden, Deputy Director of Requirements, Air Force Space Command

10:00 AM
- Access to Space, Dr. Marshall H. Kaplan, Chairman, Launchspace, Inc.
- Scientific Applications, Dr. Supriya Chakrabarti, Professor, Boston University Center for Space Physics

12:00 PM Lunch

1:15 PM
- Remote Sensing Applications, Dr. John Mustard, Professor, Brown University Department of Geological Sciences
- Governmenti¿½s Role in the Future:
Mr. Lionel S. Johns, Associate Director of Technology, White House Office of Science and Technology Policy
Mr. Alan Ladwig, Associate Administrator, NASA Policy and Plans

3:45 PM
- Media and the Public, Ms. Lori Garver, Executive Director, National Space Society
- Opportunities for Small Countries, Mr. Sven Grahn, Swedish Space Corporation

6:00 PM Reception and Mixer

Saturday, May 4
8:00 AM Continental Breakfast

9:00 AM
- Next Generation Communications Concepts, Dr. James Stuart, Vice President for Space Infrastructure, Teledesic Corporation
- Robotics Applications, Dr. Red Whittaker, Director, Field Robotics Center, Carnegie Mellon University

11:15 AM
- Education and Outreach, Dr. Paul J. Coleman, Jr., President, Universities Space Research Association
- Financing Space Ventures, Mr. Robert D. Leppo, Director, Belisarius Fund

1:15 PM Luncheon and Speaker: Mr. Thomas Rogers, President, Space Transportation Association

2:30 PM
- Responsible Space Development, Mr. Leonard David, Space News Correspondent

- Future Space Industries, Mr. Charlie Chafer, Founder, Celestis Corporation

To register, call Spectrum Management Group at (301) 353-0022.

For more information, contact:

David Goldstein
Space Horizons Chair
phone: 401 331-8975
fax: 401 331-0438
email: David_Goldstein@brown.edu

** Space Horizons Summit Registration Form **

To Register Complete this form and remit with payment to: SMG, 13235 White Church Circle, Germantown, MD 20874; Tel (301) 353-0022; Fax (301) 353-0020; EMail: specgroup@aol.com

Registration Information
Name _____ Badge Name_____
Title/Position _____
Company or Agency _____
Address _____
City _____ State _____ Zip _____ Country _____
Phone _____ Fax _____
E-Mail Address _____
How did you first learn about the Space Horizons Summit?_____
_____

Choose six of the following topic sessions in order of preference, from 1 (highest) to 6 (lowest):
__ Access to Space __ Future Space Industries
__ Education and Outreach __ Financing Space Ventures
__ Government's Role in the Future __ Media and the Public
__ Next Generation Comm's Concepts __ Opportunities for Small Countries
__ Remote Sensing Application __ Responsible Space Development
__ Robotics Applications __ Scientific Applications

Are you interested in facilitating a small working group in one of these sessions? (Facilitators attend at a discounted rate.) __ Yes __ No
If yes, specify which session: _____

Registration Category
Pre-Registration On-Site Registration
Received Before 4/30 Received After 4/30
Standard __ $495.00 __ $545.00
Academia/Government/Non-Profit __ $395.00 __ $445.00
National Space Society Members __ $395.00 __ $445.00
Student (does not include meals) __ $40.00 * __ $40.00 *
Pre-Summit Seminar Attendees __ $345.00 # N/A
Total $_____

* Students must show proof of full time status and show a photocopy of valid student I.D.
# If attending both the conference and the workshop (you must pre-register) deduct an additional $50.00

**** There is a 10% discount for 4 or more registered ****
**** individuals from the same organizations. ****

__ Dietary Restrictions: Check here if you have any dietary restrictions.
__ Special Disabilities: Check here if you require special assistance or services. Please include with your registration form a written description of the special services required.

All registrations include admission to all technical sessions, opening reception, 2 continental breakfasts, all refreshment breaks, and luncheon.

** Full Payment Must Accompany Completed Registration Form. Payment must be made by check (in U.S. dollars only, drawn on U.S. bank), payable to SMG, money order, or one of the following credit cards:
__ Visa __ MasterCard __ Diners Club __ American Express __ Discover

Credit Card Number _____ Expiration Date _____
Cardholder Name _____
Cardholder Signature _____

**Refund Policy: Cancellations must be made in writing. Those received at SMG headquarters by April 1, 1996 will be subject to a $75.00 cancellation fee. No refunds will be given after April 1, 1996 and there will be no exceptions.

732. Satellite questions

Newsgroup: rec.radio.amateur.space
Date: 1996-04-09 00:00:00 UTC
From: Victor.Vanderberg@275-17.woodybbs.com
Message-ID: <48f_9604091143@woodybbs.com>
Source record: 22599

Hello Everyone,

I have been tracking MIR and a few satellites, such
as RS-10, with the program Tracksat. It has been fun
listening to the activity and knowing when the satellite
can be heard. In my lists of KEPS(i think thats right) I
Have seen many different satellites. Where do I look to
get more information on these other sats? Information such
as frequencies for transponders or beacon frequencies. I am
interested mostly in the satellites realted to amateur radio
but i would still like information on others. I occasionally
come across an article or two in a magazine but i would like
to find a more detailed listing. On a side note.. I read of
a satellite that carrys a FM voice repeater (Oscar 21). Is this
still operational or are there any other satellites that are
similar. This is very interesting to me but there is not much
interest in satellites in my area. Any comments are welcome.
Thanks in advance.
Victor Vanderberg

733. Balloon altitude measurements

Newsgroup: rec.radio.amateur.space
Date: 1996-04-09 00:00:00 UTC
From: "Darby G. Cooper" <dgcooper@iastate.edu>
Message-ID: <316B10BB.2A35@iastate.edu>
Source record: 22600

The Iowa Space Grant Consortium High Altitude Balloon Experiments in
Technology (HABET) utilizes a lightweight Motorola GPS receiver for
altitude information. A pressure sensor that is accurately calibrated
could also be used as an altimeter (simply compare measured pressure with
standard atmosphere).

You might also want to visit our web site at
http://www.public.iastate.edu/~isgc
look for the link to HABET

The same handbook also discusses the relative merits of other antennas.
The Lindeblad is particurlarly suited to satellite reception. One
problem with the Quadrifilar is that it is dificult to optimize.
Ideally, to insure the best infinite balun match and the proper
operation on the smith chart, some very expensive test eqiupment is
needed. Whereas the Lindenblad is less critical to build, has a
broader bandwidth, and a pattern more suited to low earth satellites.
A recent poster here has an extensive web site discussing the
Lindenblads. Unfortunately, I can't remember his name or URL. The
Lindenblad is not listed as such in many antenna books. Generically,
it is sometimes called a skewed pattern multiple dipole antenna...

735. Satellite Tracking Program for XT

Newsgroup: rec.radio.amateur.space
Date: 1996-04-09 00:00:00 UTC
From: Aart.Wedemeijer@pa3cpl.idn.nl
Message-ID: <243_9604092137@idn.nl>
Source record: 22602

Replying to a message of bulletindx@nyongwa.montreal.qc.ca to All:

b> The fastest satellite traking program I have seen on an XT is called
b> QUIKTRAK, but you have to enter all the Keps manually in the program.

Oh no, there's a function to import nasa-2Line elements!

Or use Instanttrack, buy it legally and you support AMSAT. It's nice, runs OK
on an XT.

Greetings, Aart!

739. Radio Station Database Program Stand Alone

Newsgroup: rec.radio.amateur.space
Date: 1996-04-11 00:00:00 UTC
From: Charles Bolland <chuck@flinet.com>
Message-ID: <316C9205.2CAC@flinet.com>
Source record: 22606
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.noncomm,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Sir,

It's still available. The IBM/DOS Broadcasting Radio Station Database Program for Longwave, Mediumwave, and Shortwave. Over 4,000 records included already. The program is completely read and write. Records can be added or changed. Sorts in many different formats both on your screen and printing.

If you would like a copy of the program, send your request to "chuck@flinet.com". Please include your MAILING ADDRESS. For example, your street number, city, state and zipcode. Also include your Email address.

The program will be sent to you via Email probably within 24 hours if not sooner. If you request the program and haven't received it in that period, check back with me..

Remember to send your address. Requests without a mail address will no longer be acknowledge to save time on the internet. In the past, requests without an address were reminded with a message. Usually, the reminder went unanswered anyway. If it was, the reply was sometimes very rude.

This program is free! Everything works. It has many features and they all work, not like shareware where some of the features work and others don't.

You address will be kept confidential. I will be sending you a first class letter later explaining another full featured Database program available. It's very big!

WinOrbit 2.8 should update both tracks and show both footprints, if those options are turned on in the Main Window Options menu.

748. Antenna's for low orbit satellites

Newsgroup: rec.radio.amateur.space
Date: 1996-04-13 00:00:00 UTC
From: xwtbx@aol.com
Message-ID: <4kotpn$hl5@newsbf02.news.aol.com>
Source record: 22615

I am just getting interested in working the satellites, and am a little intimidated with both the size and cost of the antennas used and their rotors. According to the Satellite Experimenter's Handbook (ARRL), I should be able to work the low earth orbit birds using ground plane antennas and the appropriate SSB trancievers. I was wondering if anyone could offer advice on the feasability of this setup.

Thanks and 73

Bill, N1TLQ

749. R0MIR active!

Newsgroup: rec.radio.amateur.space
Date: 1996-04-14 00:00:00 UTC
From: bd703@scn.org
Message-ID: <Dptu1B.456@scn.org>

Shannon Lucid was on the radio Friday morning.

KD7MW in Shoreline, Wa. made a brief voice contact at 08:36 UTC April 12th.

There was more activity Sat morning around 07:38 UTC and 09:17 UTC on the
13th. There seemed to be problems with the MIR radio. Was transmitting
a continuous carrier with periodic packet bursts. Shannon finally came
on voice at 9:17 utc and was talking to N6LH about cables and resetting.

Looking for a manufacturer who can build an antenna for 900 MHz radio modem, communicating to a balloon. A pattern similar to that of a turnstile, crossed dipoles over a ground plane, for any angle communication. Presumably, the balloon could have the same thing, oriented downward. Anybody with a contact for this type of work?

This seems to be as good a place as any to ask this:

My brother gave me a three foot dish (just for the heck of it). Is anyone receiving any shortwave stations broadcasting via satellite? If so, what would I need, in addition to the dish, to receive these signals? I suppose I'm limited to Ku-band, but that's fine.

I've been doing ham/shortwave for about 25 years, but this is new to me. Thanks!

Hi!
I have worked som of the low orbiting sats. On the RS series, I have used
a 3 element HF beam and on 2m I have used a vertical Ringo Ranger, both
working nice! The signals from RS-15 are a litle bit weaker, and a beam
antenna is better to use. On the AO-10/13, I'm using a 18 element
horisontal yagi on the up link, and a 2x10 element cross yagi on the
downlink. On the 70cm uplink I have an additional power amplifier
75-100W, and a mast head preamp on the downlink (23dB). With this
equipment it's possible to work most of the time when the sat is over the
horizon. I have even worked up to abt. 35000km with 20W on the uplink!!!
I have read somewhere that a J-pole antenna is a good solution. I have
made a dualbander 2m/70cm, and are planning to use it on the microsats,
but I havn't put it into the air yet. I have found a good description on
the net - 'The Copper Cactus Antenna' - sorry, but I'dont remember
where!!

Hi Frank!
I don't know of a solution to your problem, I don't even know the
Trackbox!!! Thats why I'll ask you some qustions! ...hihi
I wonder if it's possible to get the trackbox in kit form, or is it sold
as a complete unit? If its possible with a kit, is also the circuit
diagram and the pcb layout known 'stuff'? I think I have seen an update
of the software on the net. I would like to build a trackbox (I like
building systems - not buing the complete), so any info from you would be
nice!

From: "Roger E. Koss" <kossr@edl1.ksc.nasa.gov>
Message-ID: <4ktsd9$aqi@niven.ksc.nasa.gov>
Source record: 22477

I presently use a homebrew 5/8 wave groundplane (featured in Radio Fun a couple of years ago) at 30' for the uplink to RS-10, and a 10 meter dipole at about 16' for the downlink. My rig is the Yaesu FT-290R Mk II, a great inexpensive rig for a beginner satellite operator. The only problems I have working the RS-10 bird, MIR and SAREX is that my schedule never seems to coincide with theirs! However, I do have two verified RS-10 contacts, an STS-57 SAREX QSL, and have been able to connect to R0MIR on packet several times (unfortunately could not complete the QSO's due to QRM - - darn the bad luck!). So, I would say all the elements of my station are suitable for beginning satellite operation just like the Handbook said.

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

> could offer advice on the feasability of this setup.

I have an FT736R and a GP-9 antenna.
I was surprised that I could hear FO-20 quite well, with the 25W
output of the FT736R I could just about hear my own (CW) signal.

Switching in a PA and increasing the power, I have managed a contact
(SSB) via this satellite.

One problem is that the GP-9 is a "high gain" vertical, which
essentially means that most of the power is directed towards the
horizon, so as the satellite altitude increases, the signal suffers.
it is not a nice, even coverage.

Also, sharing the same antenna for TX and RX means using a diplexer,
which means RX loss ... and it isn't (easily) possible to use a
mast-head pre-amp.

I am wondering about other antenna combinations (Lindenblad ?) - or
should I just save the money for the tower, rotator, antenas and
pre-amps ???

I was also surprised that I could copy OSCAR-10 with this set-up
(2M downlink).

I don't know if I have just been lucky, but satellite working is
easier than I imagined, and is possible with simple equipment.

On a personal note - I spend all day playing with computers, and have
had internet access for more years than I want to remember, so packet
seems terribly antiquated, unchallenging and generally boring to me. It
is rather a pity that most recent satellites are totally packet
oriented. I could be uncharitable, and say that this is due to a
generation of electrical engineers who are only comfortable with digital
techniques - and designing and building a high quality linear
transponder is more difficult than a store and forward digital mailbox
-- but, that might just be too uncharitable. Anyway, the plethora of "me
too" flying digital mailboxes, and lack of linear transponders, I find
personally dissapointing.

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Hi Joe,

I don't know about the other radio's, but I like the TS-790. The TS-790 could be improved some, but it is some a good radio for satellite.

The side window antenna was designed by Andy Bachler N9AB of the Motorola Amateur Radio Club. While it's well suited for the shuttle application, I wouldn't recommend it for anybody on the ground. Electrically it's the equvialent of a quarter-wave whip sticking out of the shuttle's window, but it's got about a zero db gain.

From the ground your better choices would be a beam antenna of some kind (Yagi or Quad), with a J-Pole, Eggbeater, or other omni ground plane as a backup.

Not exactly low cost, but certainly the jazziest method ....

Use a GPS receiver. It will give you an extremely accurate altitude,
latitude, and longitude. In fact you can purchase a combination mini
packet modem with a built-in GPS receiver which seems rather suited to
your application. As a bonus the packet capability will let you transmit
all of your telemetry while the balloon's in flight in a format which
anybody can read.

I am aware of the limitations of the antenna in service on the earth, but
I am trying to build a replica of that specific piece of shuttle hardware.
If anyone wants to send me the plans of the shuttle 2m FM window
antenna, please reply by E-mail.

Joe,

I bought the Ic-820H to use for Satellite work and had a lot of problems with
the interfaces to control the radio's freq., mode, etc. The support from Icom
was not any help. I worked with it for 60 days and finally traded it in on a
new TS-790. I was up and running with full computer control of the radio,
antenna tracking, and Packet TNC in less than a day. I looked at the
FT-736R
but never tried it out. The TS-790 is the oldest of the group, but it does the
job as advertised.

Universal Radio M-8000v5 Communications Terminal/Decoder
for serious HF, VHF/UHF monitoring!

Provides decoding and video output to VGA monitor using
it's own, internal processor! No computer required.

The decoder includes the following capabilities:

Morse Code (CW), Baudot, RTTY, ASCII, Packet, PACTOR, Simplex
Telex Over Radio (SITOR), simplex and duplex ARQ and FEC codes,
PICCOLO code, ACARS, POSAG and GOLAY pager codes, and
Facsimile (FAX) images, and WFAX (Weather FAX)!

Includes VGA Color monitor port, printer port, AUX port,
and two audio source inputs!

This is the latest version currently sold by Universal
Radio! List price: $1,499.00, Discounted at: $1,349.00

I recently lost my job and need some fast cash, will sacrafice
for only: $800.00

They probably didn't have the rig on. Sometimes, the station is off the air while power is used for other things, while repairs are underway, or when the crew just doesn't feel like operating.

You were on the right frequency with an adequate antenna, rig, etc., AND current keplerian elements? Sometimes the station orbit is changed, which leaves us with pretty useless data -- even when it's only a week old!

Good luck & 73

I haven't heard any packet activity from MIR since at least a week
before the recent US shuttle/MIR joint docking. Evidently Shannon, the
current non-ham operator of R0MIR, has been talking to folks on the
ground about what to do to get the tnc functioning again.

Hi All,

Shannon stated that the packet station is off the air and they are
working on it. Please don't send packets when you do not hear the
downlink as it is interfering with the voice contacts that are taking
place on the same frequency. The voice contacts are available quite
often now so listen first!

Finally heard Shannon Lucid, voice on 145.550 a couple nights ago. Tried, but wasn't able to chat with her, this time... I have lestened for her on every pass since, she hasn't uttered a word, at least not while over NW Oregon. I even drove up to a hill west of here, borrowed a friends repeater antenna on a great big tower and hooked up my amplifier in hopes of making a voice cntct, but again, silence..

I don't know what their schedule is up there, however I do know that they operate on Moscow time, making our pass/location fairly ideal in that it's post supper time up there when they go over, seemingly a good time for Shannon to play ham :) But still, contacts in these parts (perhaps everywhere) are a rare catch indeed...

I REALLY miss having 'ol Doc Thaggard up there, he rarely missed a night without getting on the 2m and making a zillion contacts, we had about a dozen qso's in about 2 weeks time.

Perhaps Shannon will settle in and get a bit more sociable on the 2m rig sometime soon, if not, those that do make a voice contact with her should promptly have their tape of it bronzed, as it is a rare occurance thus far.. Also, I have not heard a packet burst from MIR in a real long time, is it broken??

73's all, and keep trying!! Nothing gets your adrenalin pumping more than talking with space people <grin>

Hello !

What kind of space antennas are going to be mounted on the new satellites
from Iridium and Globalstar which are going to be launched -98 ?

How much are the new dualbanded (GSM/Satellite) satellitephones used to
operate with the abovementioned satellites going to cost ?

Source record: 22503

The TNC was shut down w/ the xceiver 2/28/96 in preperation for the STS docking. As reported elsewhere in this group, the xceiver has been fired up, by one of the Yuris, and M/S Lucid given the MIC. Heard some OM's in RR on the 143.625 Nite before last around 2:00am (edt), but nothing on 145.550.

BTW; My STS-76 MET clock is still ticking here, and it sez 27d:10h:42m:30s as I type, so it's still early in Shannon's stay, Don't forget, Dr. Norm admitted to being sowhat BORED after awhile......

Once the "honeymoon" is over, She'll be a regular.....stay tuned.

George N2LZH

Anyone interested in satellite tracking might want to take a trip to:
http://www.netwide.net/logsat
It's the home page of LogSat Professional, a satellite tracking program under Windows. The commercial version of the software is advertised there, but you may download the demo version as well. The site also carries fresh keps (updated daily) for about 700-900 satellites, available both as a zip file or in uncompressed format, ready to be read by tracking programs. Also available are pseudo Keplerian elements for the Moon, which will allow you to track it just as if it was a normal artificial satellite. Of course there will also be a few links to other interesting pages related to ham radio.

Hi Jack!
I shuld have sendt you a separate article/mail, but I don't know yr
e-mail addr!
Thanks for answering anyways! I have sendt a letter to TAPR, and they
said that they have 2 more kits in stock. I havn't ordered anything,
because I wanted to use some of the 'stuff' I have in my junkbox! I have
diffeerent lcd's, processors, RAM, EPROM etc, and hoped that I could get
a copy of the schematic diagram and the software somewhere. I can make my
own pcb - that would be no problem. I suppose its only possible to get a
.BIN file with software, I could have wanted the source of course, but
I think that's rather difficult! If I could get the source, I would do a
special adaption tom my home made antenna rotators.
So, I would be grateful for any info on the trackbox!
Thanks in advance!

73's de Karl Jan LA3FY

PS I hope Frank J. Dziurda K don't mind that I have connected this
article to his chain ...hihi

791. Help: TS-790 & AMSATS

Newsgroup: rec.radio.amateur.space

From: pmarkham@sun.lssu.edu
Message-ID: <4l8hi8$8k8@doc.zippo.com>
Source record: 22508

I am putting together an amsat station. I own a TS-790A, G5400B,
KCT with tuner, and a PacCom NB96? 1200/9600bd TNC.
I have no antennas or preamps, yet, and intend to use about 100ft
of air dialectric catv 1/2" hardline.
I want to work both voice and data, and intend to use w9ip's NOVA
program to run the automated functions. I would like to be able to use
the system for meteor scatter, terrestrial ssb and packet.
I realize there is likely to be a compromise in antenna system
performance with a "does all" system, but I am looking for the biggest
bang for the buck.
Any and all suggestions, relative to my desires are welcome. Info
concerning known problems with the equipment described is requested.

TIA, Pete/wa4hei

HearSat is an Internet mailing list for discussion on the subject of receiving radio signals from Earth-orbiting satellites. Some of these signals may be received using very simple and inexpensive receivers. Signal types range from recorded voice messages from the Russian space station Mir, and live audio from the US Space Shuttle, to packet data telemetry from amateur radio microsats. HearSat subscribers include many radio hams and experts in earth orbiting satellites, as well as beginners listening in for their first radio contact from space.

Subscribe to hearsat-l by sending an e-mail to majordomo@grove.net with any subject and the message (without the quotes) "subscribe hearsat-l" in the body.

The HearSat website is located at www.grove.net/~hearsat.

Notes
-----

1. NORAD Catalog Number is also known as U.S. Space Command (USSPACECOM) object number and NASA catalog number.
2. No orbital plane position = satellite no longer operational.
3. Clock: Rb = Rubidium; Cs = Cesium.
4. Selective Availability (S/A) had been enabled on Block II satellites during part of 1990; S/A off between about 10 August 1990 and 1 July 1991 due to Gulf crisis; standard level re-implemented on 15 November 1991; occasionally off for test and other purposes. Currently, PRN15 and PRN28 appear to have little or no S/A imposed.
5. Anti-spoofing (A-S) was activated on 94-01-31 at 00:00 UT on all Block II satellites (ref. NANU 050-94042); occasionally off for test and other purposes. A-S was turned off on all satellites at 20:00 UT on 95-04-19 and back on on 95-05-10; off again between 95-06-19 and 95-07-10; and between 95-10-10 and 95-10-31. A-S has been off on PRN28 since 95-02-21.
6. PRN number of SVN32 was changed from 32 to 01 on 93-01-28.
7. PRN05 and PRN06 are equipped with corner-cube reflectors for satellite laser ranging (SLR). SLR tracking of the satellites will permit onboard clock errors and satellite ephemeris errors in GPS tracking to be differentiated.
8. The decommissioning date for PRN06/SVN03 is the date of termination of operations of this satellite (ref. USNO) and is about 3 weeks later than other published dates for "deactivation".
9. PRN12, which was in declining health (primarily due to power supply problems) and which had been unusable since 95-11-18 due to end-of-life testing had its navigation payload switched off permanently on 96-03-26 (ref. NANU 051-96086, NANU 242-95325) and was boosted to a higher orbit.
10. PRN03 (SVN33) was launched on 96-03-28 at 00:21 UT. It achieved initial usable status on 96-04-09 at 21:17 UT (ref. NANU 068-96100).
11. PRN28 is in the process of being moved from the C-2 slot to the C-5 slot, about 20 degrees away. This move, which was initiated on 96-03-06 by lowering the orbit of PRN28 by about 6 km, made way for PRN03. PRN03 is a backup for PRN28 which has some undisclosed equipment problem. PRN28 will remain on the air, with some subsystems shut down to conserve power (ref. NANUs 045-96066, NANU 068-96100, and GPS World Newsletter). At the moment, PRN28 is about 11 degrees away from PRN03. The move should be completed in about another month or so.
12. Announced dates of next scheduled launches: 96-06-30 (SNV40) and 96-08-29 (first Block IIR satellite).

>satellite rig.

The TS-790A has some horrible defects that make it unsuitable for satellite operation. The most brain dead feature is that the narrow filters don't work in the sub-band receiver, but that's the one you have to use when operating satellite because only the main band unit transmits. Thus your SNR suffers severely unless all you operate is SSB.

And like all other Kenwood VHF+ gear, it has absolutely horrible thermal design. The PA modules get very hot. The 70cm module in mine cooked out after only 30 days of operation (and Kenwood took months to fix it). The replacement PA module was worse. Instead of 18 amps current draw for 27 watts output (yeah it didn't meet power output specs from the factory), the replacement PA drew 22 amps for only 22 watts output. Then the 2m PA module died. Same problem, thermal cookout opened metalization in the module. I sawed that one open rather than send it back to the factory again, and fixed it myself.

And then there's the brain dead user interface. To make sattrack tuning work, you have to depress and *hold* the SAT button. That makes tuning a two handed job. And if you release the SAT button, you have to press it *twice* to get back into track tuning, useless. I rigged up a mechanical clamp to keep the SAT button depressed all the time.

I finally managed to unload it on a sucker (hi Brian), and got a real radio, the FT-736R. It runs cool, the narrow filters *work* for satellite, there's a for real rotary switch that puts you in sattrack tuning and *leaves* you in sattrack tuning, etc. In other words, it works right.

I know, I should have known better than to buy a Kenwood. I've got enough experience with them to know that they are all terminally brain dead. I just have to plead temporary insanity when I bought yet another of their poorly designed pieces of crap. (Hope springs

eternal that they'll finally get *something* right on a VHF+ radio.
Their HF stuff isn't half bad.)

798. R0MIR contact!

Newsgroup: rec.radio.amateur.space
Date: 1996-04-21 00:00:00 UTC
From: ghansen@accessone.com
Message-ID: <ghansen.745.3179EB71@accessone.com>
Source record: 22515

On April 21 at 0634 UTC made my first call to R0MIR and was rewarded with a return call from Shannon. A real thrill for me and more than likely for Shannon too! :-) She sounds a bit taken back by it all but I bet she gets the hang of it soon enough. Mir certainly had a solid strong signal to Tacoma, Wa. I am using a Yaesu FT-2500 running 50 watts into a Cushcraft AR270 vertical up about 40ft.

A bonus to all of this was a ham in Astoria, Oregon taped the whole QSO. Thank you NR7F!!

BTW, can anybody tell me the QSL route for Shannon/Mir??

A repeater antenna? That probably won't work very well...
Usually a repeater will use some collinear array, and it radiates only
towards the horizon.

It is better to borrow the auto-tracking az/el steerable yagis from a
local packet satellite enthousiast. That will provide you with a
fullscale signal and a lot of ERP towards MIR.

Hi. yes, I got lucky again, and worked her at 0638. she mentioned that
06-0700 is the best time to get ahold of them, and that the Yuri's prefer
to talk when over Russia, presumably due to language differences. She
doesnt have a preference for a particular day that she operates.

806. NORAD Two-Line Orbital Element Sets (TLE796)

Newsgroup: rec.radio.amateur.space
Date: 1996-04-21 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4lebj6$n8l@blackbird.afit.af.mil>
Source record: 22523

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

For Sale Magellan GPS NAV DLX-10

Due to expansion underway at the Internet Provider I use if you are interested in the following receiver you will have to contact me via. phone, E-mail is not working at this time! My apologies.

Magellan GPS NAV DLX-10, Handheld 10 channel GPS receiver, includes receiver in like new condition, quad helix detachable antenna with 6 ft. extension cable and suction cup mount, Magellan active patch antenna with 30 ft. cable, PC RS232 data and power cable, NEMA/DC power and data cable, 110 AC power supply, extra battery clip, receiver mounting bracket. and manuals. $600+shipping 505-382-0596

DGPS is not readily available here in the Rocky Mountains of NM, and I am going to a code phase survey receiver to allow postprocessing for 2 to 5 Meter accuracy.

hello. i have recently builted up a new computer for myself. i ordered
a new botherboard/cpu and ordered the intel 100 mhz cpu chip to go in
the new mb they were out of the intel and sent me the amd 120 mhz chip
instead. What I want to know if anyone out there has an amd cpu chip
and if instant track runs ok with it. It does not on my system. I go
to the menu option number 2 to track a satilite with the map and text
on bottom. well the text info on the nbottom of the screen is all
garbled and not read able. I would like to hear from people who have
this cpu chip and run it to see if you have the same problem.

Ahhh, wouldn't that be nice.... Actually, the antenna is mine (2X4MAX) and is on loan to the repeater owner until his gets in and we have nicer weather to put it on the tower. It's true that the high passes of the MIR (45deg and above) are not so useful with the present antenna setup, but for the one to 45 degree passes it's more than sufficiant, a dozen QSO's with Dr. Thaggard on the MIR last year using the same antenna is a testiment to that.. In the mean time I will dream of anaz-ele circular polarized, 5400 rotor etc etc..

She was yaking away this evening as well :) A fellow amateur and I
drove up to another friends repeater (again) and "borrowed" it's
antenna to try and make a contact, no luck, again.. :) Although she
was S-9 she didn't seem to hear us, leading me to believe that perhaps
she is using a split, I'm looking into this.. I'll keep trying..
Sometimes the "fishing" is just as fun! :)

>yet another of their poorly designed pieces of crap.

Yes, Kenwood user-interface always sucks...
Quite some years ago, the local packet radio networking group bought
a lot of TM-531E 23cm FM transceivers to use for links in the Dutch
packet network.

They have to operate in a 59 MHz split for this, and it is unbelievably
complicated to set them up to do that... when you don't have a manual
with you when at a link site, you are basically lost when you have to
retune a transceiver. And sometimes they suddenly lose their memory
and have to be retuned :-(

ALL the Kenwoods (even the 790) are lacking a programmable repeater split.
You get what they think is right for your area. However, the split
has been changed a few times because of bandplan changes and coordination
with other band users, and now it is 28 MHz. That is not present in
Kenwood transceivers, so you can no longer freely tune around in the
repeater subband (you have to program each repeater in a "split" memory).

Also, the TM-531 has serial control via its MIC jack, which is proven
by the existence of a "remote control" from Kenwood. However, they
refuse to publish the protocol used. (unlike Yaesu and ICOM)
So, we cannot do remote control of our transceivers in the packet
network, which would have been very nice (to set power level, reprogram
the frequency when it has once again forgotten it, read S-meter value, etc).

There is also a bad bug in the design: they generate output even when
the PLL has not yet locked. This causes interference around the transmit
frequency. Setup a spectrum analyzer to store peak values seen around
the transmit band of the local node, and you see a 3 MHz wide spectrum
around the transmit frequencies. The interference is so strong that it
jams other links.
The 2M and 70cm units have the same bug.

Finally, they are not suitable for G3RUH modems, so we still run them
at 4800 bps using HAPN modems.

All in all it was a bad choice. The only advantage of these boxes has
been that they don't fail too often, especially when run at 1 Watt.
Unfortunately, there is no really better commercial alternative. The

only well-working 23cm link transceivers are the kits available from
Germany...

Rob

She is running simplex. its just probably that a million guys are
calling her at the same time. I talked to her again last night at about
0530. Shes still real new to radio and hasnt learned to handle pileups
yet. With 5 more months to go, I bet she gets lots of practice.

Hiya Dan,

Funny, I heard her talking to you! It was about 10:40 PDT and I (we)
were up at the repeater site trying for her, I even taped it :)

Good go'n, I just hope I am able to slip a qso in there before she
returns to the planet's surface :)

821. Space Horizons conference, May 3-4, 1996 - final announcement

Newsgroup: rec.radio.amateur.space
Date: 1996-04-23 00:00:00 UTC
From: David_Joshua_Goldstein@brown.edu
Message-ID: <4livbh$bqu@cocoa.brown.edu>
Source record: 22538

Space Horizons: A Summit on Emerging Applications, Missions, and Technology
Friday and Saturday, May 3-4, 1996
Hyatt Regency Cambridge, Cambridge, Massachusetts

Sponsored by AeroAstro / Boston University Center for Space Physics /
Launchspace / National Space Society / New Space

The Space Horizons Summit is the first to address in a hands on, workshop setting, the fundamental changes now occurring in the way humans operate in and use space. We stand at a crossroads - In what directions can and will the space community proceed from here? For two days, experts, leaders, and visionaries from across a spectrum of disciplines in the space program and industry will meet in an interactive "think tank" to discuss emerging applications and markets, developing technologies, and the future of the space industry and community.

Our time is one of turmoil and redefinition in the space sector. The economics of space is changing. As space and defense budgets shrink, government and space industry are changing the way they do business. In addition, global competition has become a significant factor for the space industry. A growing market has already emerged in communications, small satellites, remote sensing, space biotechnology, and launch vehicles. Small and reengineered companies are proposing and enacting a myriad of new initiatives in these areas. At the same time, new terrestrial and space technologies are driving space activity towards new applications and methods.

Out of these changing budgets, needs, economics, and technologies will emerge the next generation of space applications, programs, and commercial ventures. You can just sit back and watch this new era unfold. Or you can help to create it.

The two day Summit will take place May 3 - 4, 1996, at Boston University and the Hyatt Regency Cambridge. In addition, a pre-summit seminar entitled, "New Approaches to Economics, Design, Development and Maintenance of Space Systems", will be held on May 2nd.

The Space Horizons Summit will gather some of the new space initiative's best minds and most visionary pioneers in an informal, creative setting to study and to uncover opportunities, ideas, directions, and possibilities for the future. Participants will be confronted with and discuss emerging opportunities for space applications in areas such as remote sensing, communications, science, mission support and education. The Space Horizons conference is unique in its interactive format, with numerous small working groups and interactive sessions to grapple with the challenges and opportunities facing the space community today.

At the conclusion of the summit, you will have gained a new outlook on many aspects of space:
- possibilities for viable space ventures and applications;
- potential new commercial space initiatives that the market will demand and support;
- improved understanding of developing technologies and ways to apply them to both emerging and established opportunities;
- knowledge and connections necessary to bring your concepts and ideas to reality;
- a visionary perspective on new ways of "doing space";
- an appreciation of how issues such as education, the media, and responsibility in space development can be advantageously integrated into space efforts;
- exposure to the thoughts and ideas of many of the brightest, most visionary leaders in space - and a chance to interact with them in an informal, problem-solving setting.

At Space Horizons you will work closely with leaders from all segments of the space community - industry leaders, technical innovators and visionaries, investors and market experts, educators, government planners, university researchers - an interdisciplinary mix representative of all aspects of space activity.

The pre-summit seminar, led by three respected leaders in the fields of space transportation and microsatellites, will be held May 2nd. Starting with a clean sheet of paper, this special one-day course begins surveying the state of the art in minimum mission technologies. It will examine the approaches available to space mission planners and developers to achieve minimum cost and therefore to enable a new generation of space initiatives. The result is a dramatic savings over conventional system designs coupled with enhanced reliability and a program structure designed to be attractive to sources of capital. The approaches demonstrated are equally applicable to scientific, remote sensing and military one of a kind and cluster space systems.

The conference and seminar provides an opportunity to seed contemporary space activity with a new generation of initiatives and applications. If you have an interest in innovative ideas, an interest in the future of space, creative visions, and new technologies, this conference is for you. Weï¿½re looking forward to your participation at the Space Horizons Summit - helping to plot a new course in space.

Registration information is at the end of this message.

Space Horizons Summit Schedule
(subject to change)

Thursday, May 2
8:00 AM - 9:00 AM
Continental Breakfast

9:00 AM - 5:00 PM
New Approaches to Economics, Design, Development, Deployment, and Maintenance of Space Systems: A workshop on minimizing the cost of space transportation,

space systems and operations, and on maximizing economic returns from space.
Rick Fleeter, Ph.D., President, AeroAstro, LLC.
Marshall H. Kaplan, Ph.D., Chairman, Launchspace, Inc.
Steve Newman, MBA, President, Launchspace, Inc.

Friday, May 3
8:00 AM - 9:00 AM
Continental Breakfast

9:00 AM - 9:50 AM
Convocation and Keynote Speaker: Dwight Duston, Director of Technology, BMDO (invited)

10:00 AM - 12:00 PM
-- Access to Space, Dr. Marshall H. Kaplan, Chairman, Launchspace, Inc.
-- Scientific Applications, Dr. Supriya Chakrabarti, Professor, Boston University Center for Space Physics

12:00 PM - 1:00 PM
Lunch: free in Boston

1:00 PM - 1:45 PM
Plenary Speaker:
-- Mr. John Westling, President-elect, Boston University
-- Mr. Lionel S. Johns, Associate Director for Technology, White House Office of Science and Technology Policy

1:45 PM - 3:45 PM
-- Remote Sensing Applications, Dr. John Mustard, Professor, Brown University Department of Geological Sciences
-- Governmentï¿½s Role in the Future, Mr. Alan Ladwig, Associate Administrator, NASA Policy and Plans

4:00 PM - 6:00 PM
-- Media and the Public, Ms. Lori Garver, Executive Director, National Space Society
-- Opportunities for Small Countries, Mr. Sven Grahn, Swedish Space Corporation

** Space Horizons Summit Registration Form **

To Register Complete this form and remit with payment to: SMG, 13235 White Church Circle, Germantown, MD 20874; Tel (301) 353-0022; Fax (301) 353-0020; EMail: specgroup@aol.com

Registration Information
Name _____ Badge Name_____
Title/Position _____
Company or Agency _____
Address _____
City _____ State _____ Zip _____ Country _____
Phone _____ Fax _____
E-Mail Address _____
How did you first learn about the Space Horizons Summit?_____
_____

Choose six of the following topic sessions in order of preference, from 1 (highest) to 6 (lowest):
__ Access to Space __ Future Space Industries
__ Education and Outreach __ Financing Space Ventures
__ Government's Role in the Future __ Media and the Public
__ Next Generation Comm's Concepts __ Opportunities for Small Countries
__ Remote Sensing Application __ Responsible Space Development
__ Robotics Applications __ Scientific Applications

Are you interested in facilitating a small working group in one of these sessions? (Facilitators attend at a discounted rate.) __ Yes __ No
If yes, specify which session: _____

Registration Category
Pre-Registration On-Site Registration
Received Before 4/30 Received After 4/30
Standard __ $495.00 __ $545.00
Academia/Government/Non-Profit __ $395.00 __ $445.00
National Space Society Members __ $395.00 __ $445.00
Student (does not include meals) __ $40.00 * __ $40.00 *
Pre-Summit Seminar Attendees __ $345.00 # N/A
Total $_____

* Students must show proof of full time status and show a photocopy of valid student I.D.
# If attending both the conference and the workshop (you must pre-register) deduct an additional $50.00

**** There is a 10% discount for 4 or more registered ****
**** individuals from the same organizations. ****

__ Dietary Restrictions: Check here if you have any dietary restrictions.
__ Special Disabilities: Check here if you require special assistance or services. Please include with your registration form a written description of the special services required.

All registrations include admission to all technical sessions, opening reception, 2 continental breakfasts, all refreshment breaks, and luncheon.

** Full Payment Must Accompany Completed Registration Form. Payment must be made by check (in U.S. dollars only, drawn on U.S. bank), payable to SMG, money order, or one of the following credit cards:
__ Visa __ MasterCard __ Diners Club __ American Express __ Discover

Credit Card Number _____ Expiration Date _____
Cardholder Name _____
Cardholder Signature _____

**Refund Policy: Cancellations must be made in writing. Those received at SMG headquarters by April 1, 1996 will be subject to a $75.00 cancellation fee. No refunds will be given after April 1, 1996 and there will be no exceptions.

No split frequencies John, she is working simplex. I worked her Saturday and
I know one of the ops that worked her Sunday. Simplex......keep fishing. :-)

According to Shannon, who I have talked to 3 times now, she normally operates 05-0700z and the Russians, Yuri and Yuri usually operate when over Russia. No particular day preference, just operate on a whim and/or when they have time. The call sign is R0MIR, and frequency is 145.550 simplex. When it is not in use, it is turned off. They operate on Moscow time zone.

> John KB7VZL

Cool! wish I had it on tape. Just keep trying, she doesnt have a
fixed sked on when she operates. and you dont have to go portable. I use
a 3 el quad in my apartment. just be sure to have current keps in your
sat tracking program so you know when she is available and start calling
when AOS. other wise, just keep the radio on and with squelch on, say any
pass 04/08 z and see if she works someone. I noticed that the orbits are
slipping more to the south and west, so possibly soon we will only have a
small window in the evening. GOOD LUCK! Dan WA7TDZ.

A repeater antenna? That probably won't work very well...
Usually a repeater will use some collinear array, and it radiates only
towards the horizon.

It is better to borrow the auto-tracking az/el steerable yagis from a
local packet satellite enthousiast. That will provide you with a
fullscale signal and a lot of ERP towards MIR.

Ahhh, wouldn't that be nice.... Actually, the antenna is mine (2X4MAX) and is on loan to the repeater owner until his gets in and we have nicer weather to put it on the tower. It's true that the high passes of the MIR (45deg and above) are not so useful with the present antenna setup, but for the one to 45 degree passes it's more than sufficiant, a dozen QSO's with Dr. Thaggard on the MIR last year using the same antenna is a testiment to that.. In the mean time I will dream of anaz-ele circular polarized, 5400 rotor etc etc..

I've used both the FT-736 and TS-790. I own the latter. Ergonomically
it can be a bit difficult to get used to, but it's a good rig. The
FT-736 is very goo, too, and perhaps easier to learn to use. Trouble is,
it's more expensive.

Hi All,

Shannon stated that the packet station is off the air and they are
working on it. Please don't send packets when you do not hear the
downlink as it is interfering with the voice contacts that are taking
place on the same frequency. The voice contacts are available quite
often now so listen first!

Yes, Kenwood user-interface always sucks...
Quite some years ago, the local packet radio networking group bought a lot of TM-531E 23cm FM transceivers to use for links in the Dutch packet network.

They have to operate in a 59 MHz split for this, and it is unbelievably complicated to set them up to do that... when you don't have a manual with you when at a link site, you are basically lost when you have to

retune a transceiver. And sometimes they suddenly lose their memory
and have to be retuned :-(

ALL the Kenwoods (even the 790) are lacking a programmable repeater split.
You get what they think is right for your area. However, the split
has been changed a few times because of bandplan changes and coordination
with other band users, and now it is 28 MHz. That is not present in
Kenwood transceivers, so you can no longer freely tune around in the
repeater subband (you have to program each repeater in a "split" memory).

Also, the TM-531 has serial control via its MIC jack, which is proven
by the existence of a "remote control" from Kenwood. However, they
refuse to publish the protocol used. (unlike Yaesu and ICOM)
So, we cannot do remote control of our transceivers in the packet
network, which would have been very nice (to set power level, reprogram
the frequency when it has once again forgotten it, read S-meter value, etc).

There is also a bad bug in the design: they generate output even when
the PLL has not yet locked. This causes interference around the transmit
frequency. Setup a spectrum analyzer to store peak values seen around
the transmit band of the local node, and you see a 3 MHz wide spectrum
around the transmit frequencies. The interference is so strong that it
jams other links.
The 2M and 70cm units have the same bug.

Finally, they are not suitable for G3RUH modems, so we still run them
at 4800 bps using HAPN modems.

All in all it was a bad choice. The only advantage of these boxes has
been that they don't fail too often, especially when run at 1 Watt.
Unfortunately, there is no really better commercial alternative. The
only well-working 23cm link transceivers are the kits available from
Germany...

Hi. yes, I got lucky again, and worked her at 0638. she mentioned that
06-0700 is the best time to get ahold of them, and that the Yuri's prefer
to talk when over Russia, presumably due to language differences. She
doesnt have a preference for a particular day that she operates.

833. Saturn 6 tuning - HELP!!

Newsgroup: rec.radio.amateur.space
Date: 1996-04-25 00:00:00 UTC
From: darryl.linkow@grinder.com
Message-ID: <8BF5277.01A9000354.uuout@grinder.com>
Source record: 22550

Hello all and thanks for reading this. I just acquired an old Saturn 6 antenna and am having a difficult time getting the SWR down below 2.5 to 1. I am using the MFJ-259 analyzer. I am just curious if perhaps part of the antenna is missing? There are two screws attached to a piece of phenolic board. I have attached the shield and center conductor of some RG-58 coax to these screws as the feedpoint. I am just curious if perhaps there is a tuning device (other than the capacitor plate adjustment) or a balun that should be connected to these screws on the phenolic board that might be missing? Also, might anyone have an instruction sheet or manual that came with the antenna that I might get a copy of? Any help would be appreciated.

Apparently pricing is different in the USA.
In Europe, a TS-790 is much more expensive than a similar FT-736 setup.

[This is slightly off-topic; I apologize.]

I believe I'd read somewhere that it is possible to obtain from some U.S.
government agency a colorful and detailed poster/photo of one's local area
as seen from space (having given them the appropriate latitiude and longitude,
of course).

As I'd like to have something like this to decorate my shack,
can anyone tell me:
- is this still available?
- whom do I contact?
- how much (if anything) does it cost?

Please reply by email.

Thanks,
Andy

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

SkyChart is for the Macintosh, and STSOrbit is a DOS program. If you're looking for something both powerful (2000+ satellites at the same time in one window, and unlimited windows open at the same time...), and at the same time easy to use, try LogSat Professional for Windows.

Hello! I've got some awesome news that I think you need to take two minutes to read if you have ever thought "How could I make some serious cash in a hurry???" , or been in serious debt, ready to do almost anything to get the money needed to pay off those bill collectors. So grab a snack, a warm cup of coffee, or a glass of your favorite beverage, get comfortable and listen to this interesting, exciting find!

Let me start by saying that I FINALLY FOUND IT! That's right! I found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes like multi-level marketing, mail-order schemes, envelope stuffing scams, 900 number scams... the list goes on forever. I have tried every darn get rich quick scheme out there over the past 12 years. I somehow got on mailing lists for people looking to make money (more like 'desperate stupid people who will try anything for money!'). Well, when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Circuit City Card AND my Visa...I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right away. I can smell a money scam from a mile away these days, SO I THOUGHT.... I thought I could sniff out a scam easily. WAS I WRONG!! ....I LOVE THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe an tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail' for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me

To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world -Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,
EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE

DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the most detailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name to your list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I

assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be 3, 5 will be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!!
If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then
choose 'Browse' to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no

paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like..."Get one million dollars flooding in your mailbox in two days!" You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE

CASH IS ON ITS THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

9. (This step added by Charles Reiley). Hello, This is exciting isn't it?! While I'm on the list, just add a note saying "Please include extra money tips" with your name & E-MAIL address, and I will (FOR FREE) send you some neat methods to increase the money you will receive with this plan.
Why?... Why not? I'm not a selfish jerk...I like helping out others. E-mail just makes it a touch easier and cheaper, too! After I drop off the list, I can no longer offer you this advice, obviously, but maybe someone else who gets my tips will offer and simply replace my name on this step number 9. Good luck and give this plan your all, it will definitely pay off!
Like Mike said, HAVE FUN WITH IT!!!

Well, the user interface does suck for satellite, but that would be
tolerable if it were the only problem. The bigger problem is the
inability to use the narrow filter selections for satellite operation.
When operating satellite, you transmit on the main band unit (the only
one that transmits), and you perforce must receive on the sub-band
unit. But only the main band unit allows use of the narrow filters.
That means you can't use the narrow filters for sateliite operation,
and that means that your receive SNR suffers. That's mildly annoying
on voice, where the default sub-band filter is only a bit too wide,
but it is a serious problem for digital operation, or for CW if that's
your mode of choice.

The second problem of consequence is the poor thermal design. In short,
the PA modules get *very* hot when run at levels approaching their
rated output (mine wouldn't make the advertised output). This tends
to shorten their life considerably. In fact both modules eventually
failed on mine, the UHF module after 30 days and the VHF module shortly
after the rig came back from Kenwood with a replacement UHF module
(which was even further from making rated output power, though it drew
even more current). I didn't wait for it to burn up again, but traded
the radio for a FT736R, which has none of the problems the Kenwood
suffered. If you only operate SSB, and listen more than you transmit,
the modules' heatsinking may suffice. But if you are heavy into data,
they'll die quickly. This is really inexcusable in a large desktop
radio.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.space

Looking for the specs on the TS-520 when it's hooked up to a TV-502 2M transverter. I've successfully modified the transverter for receive on a TS-850, but there's nothing in the TV502 manual about drive input levels. THe 850 puts out 0-10dBm. Any info would be appreciated.

Thanks

>she is using a split, I'm looking into this..

Shannon has been using 145.55 Mhz. simplex - and has been *very* active on the radio.

The reason you may think she's ignoring you is a simple fact of geometry. Forget all of your terrestrial experience with using 45 watts to go 40 miles. 5 watts is adequate to operate Mir with an omnidirectional antenna! (honest - did it in January).

Mir's high altitude puts it in potential contact with literally thousands of hams at the same time. If Mir was exactly overheard in Los Angeles (90 degree elevation) then its visible horizion would extend over the entire Southwest -- plus much of Mexico! It wouldn't be unreasonable for hams in Colorado, Oklahoma, and Nebraska to hear Mir -- even though it would be over 1000 miles away at that moment.

So the simple answer is that she may not have heard you because she was listening to somebody else who had a little more gain or luck.

I'm using a J-pole antenna with a 45 watt radio to talk to Shannon and have had a couple of successful contacts - plus a couple of cases where I've talked with buddies on simplex within a 40 mile radius after she's under our horizon. ;-)

Directional antennas do make a significant improvement in your gain, which will result in a higher quality signal. High power is *not* necessary - I talked to Sergei Adeev of the previous Mir crew with a 5 watt handheld using my J-pole antenna.

The crew operates on a Moscow timetable, which is about 7 hours difference from Eastern Daylight Time. So for East-coasters the crew is asleep from 3 pm to midnight EDT at the present. And the radio is fairly close to the flight engineer's bunk - so don't expect anybody to operate the radio while the others are asleep.

Shannon did receive some ham radio training on the ground, but did not have the time to get her license. She had has a bunch of on-the-job experience though! Her daughter and son-in-law do have their licenses -

I head her talking to them today (apr 27)

Expect that the best passes over the middle of the U.S. during the normal U.S. hours will be commonly spent with Shannon talking to her friends and family at the Johnson Space Center and catching up on office gossip and other minuate which doesn't make the official channels. I heard her talking with the STS-76 commander Kevin Chilton a couple of days ago.

One other key comment - remember that as the rare station they get to choose who they want to talk to and who to ignore. If you keep stepping over others or just keep blasting away they're more likely to shut off the radio than to respond.

>too" flying digital mailboxes, and lack of linear transponders, I find
>personally dissapointing.

You're being more than uncharitable. The choice to go to digital
satellites was driven by a desire to allow low power stations
with simple antennas to fully participate in global satellite
communications, and to take advantage of the launch opportunities
for very small satellites. PSK encoding allows smaller signal
margins than analog encodings, so low power and simple antennas
become practical for the ground stations. And, because of the
very small size and limited power budget of the microsats, use
of digital also allows the satellite to more effectively use
its limited resources to serve the broadest possible range
of amateurs.

Saying that the satellite builders aren't comfortable with
analog transponder techniques flies in the face of Oscar 10
and Oscar 13, built by pretty much the same small group of
people who have brought us the microsats. They certainly
know how to build analog transponders, but chose not to
for the microsats for sound technical (and economic) reasons.

854. QRM During MIR pass 4/21/96

Newsgroup: rec.radio.amateur.space
Date: 1996-04-28 00:00:00 UTC
From: bd703@scn.org
Message-ID: <DqJr7D.4HE@scn.org>
Source record: 22566

On Sunday April 21 1996, the MIR station passed near Washington and Oregon from 22:37 PDT to 22:47 PDT.

During this pass there were several Seattle area hams who attempted to make contact (myself included).

The conduct of a few of these stations was appalling. They kept calling for R0MIR even though it was VERY OBVIOUS that Shannon was trying very hard to have a QSO with a specific station!

Even when Shannon read back the call of the station she was talking to at the begining of each transmission, the same few hams would start calling as soon as Shannon unkeyed.

Here are the worst 3 offenders of that pass, as determined by listening to the recording I made of the whole sorry mess.

KC7FYQ made 16 transmissions and actually doubled with R0MIR a couple of times.

KI7JB made 14 transmissions; and K7KAI made 13 transmissions, including several that weren't even attempts to call R0MIR.

Despite the poor practices of some stations, R0MIR did make a contact with WA7TDZ , ?7AAW, KA5UAR, N6JLH, and N5TD.

The TDZ QSO must have been really a tough one, but Shannon did manage pretty well.

For the record, I made two transmissions. The first just before R0MIR came on and the second when it seemed as if she had completed a QSO.

Here's the key: Your signals should be comparable to the others
in the satellite passband, and not stronger than the beacon. If they,
too, are weak, you need to improve your receive setup. If everyone
else is strong, and you are weak, check the transmit side.

Power levels differ from bird to bird, so a single number isn't
available, sorry.

One more thing, an antenna that works well on the repeater subbands
may not work at all well in the satellite portion, particularly at
70cm. Gain falls off rapidly away from resonance, and if your uplink
antenna is tuned for repeater use, it may be doing a very poor job
many MHz away in the satellite portion of the band.

You don't say which satellite you're trying to use. For Oscar 10 and 13,
35 watts and gain yagis should be sufficient to put your downlink signal
equal to the beacon. Does the beacon sound strong to you? If it doesn't,
you may have one of several problems. If you aren't using a mast mount
preamp, you should be. Or there may be a problem with your Rx antenna.
Or you could be off-pointed from the satellite, or using the wrong
polarization sense. If the beacon does sound strong to you, then the
problem is likely high loss cables to your uplink antenna, or a problem
with the uplink antenna itself, or you may be using the wrong polarization
sense. Or it may be that your Tx antenna isn't boresighted with your
Rx antenna.

If you're trying to use one of the LEOs, then 35 watts is *more*
than enough uplink power (5 watts should be sufficient). Again,
troubleshoot as noted above. Make sure you're receiving the beacon
strongly first (typically S9 or so). This will tell you that your
receiving system is Ok. If your downlink signal is still weak
compared to the beacon, then look for loss terms in the Tx feedline
and antenna.

It compiles without problem here, after setting the correct options and
paths in the Makefile. There are many examples, so this should be no
problem.

> N3VZL

Steve,

the most common problem (really the only one) encountered when building the SatTrack code is that the location of the X11 include files and the X11 libraries is not specified right. Since that is different for each operating system the user has to do a little editing here. There are two lines in the SatTrack Makefile that deal with this issue. The first one tells the compiler where the X11 include files are. One of those files needed is X11/Xlib.h. If for instance on your system the X11 directory is under /usr/include then you need to specify the following line in the Makefile:

X11 = /usr/include

Then at least the compilation should work well. The next step is to tell the linker where the X11 libraries are. If you find the file libX11.a on your system under say /usr/lib then you need to specify the other line in the Makefile for X11R5 as

LX11 = -L/usr/lib -lX11 -lXt

and for X11R6 as

LX11 = -L/usr/lib -lX11 -lXt -lICE -lSM

That really should work (and has on literally thousands of systems all over the world).

Also, make sure you got the latest publicly released revision of SatTrack (V3.1.4). It can be found on the SatTrack web page at:

http://www.primenet.com/~bester/sattrack.html

Best regards,
-Manfred

Just wondering is there anyone out there that has the KC Tracker
working under Windows 95. I can restart in dos and everything
works wonderful. But so far cant get the DRV.COM to come up
under windows 95. Any infor would be appreciated. Thanks.

:
:
If you mean version 2.14, I agree. Version 3 caves in to the Windows thing,
and IMHO looses a lot of usability. I especially like the radar chart in the
high density view. It tells me at a glance where to point my antenna without
guessing or interpreting angles.

A couple questions about RS-12 and STS satellite tracking program.

1) Is it still in mode K... 15 in/10 out?

2) Where can I find upgrades to STS? The last one I got was in 1995.
Or, in the alternative, is there an better shareware program available
on I'net?

Thanks in advance...

Does anyone know of a program that will generate a listing of sunrise
and sunset times for a given location. I would like to be able to
generate say a month's worth, and dump it to a printer.

Please email. (It's not always easy to get on the net from here...)

Thanks,
Brent

Right now, MIR is probably easier than RS-10/11 because no special equipment is required, just a 2 meter rig and a reasonable antenna. In fact, an HT with a suitable gain type antenna might even get through.

Yes, indeed. My friend Jared Peck KB9LTV has done exactly that, with an
ADI 2-meter HT and a quarter-wave groundplane at 14 feet.

Pretty sad, isn't it, Kerwin.

I looked up the three callsigns you posted about, expecting to find
inexperienced refugees from 11 meters engaging in such behavior.
Well, that stereotype didn't hold much water.... All were old enough
to have learned better by now. Two even had higher grade licenses.

The newcomer would be Shannon herself. Let's hope she can see past
the few thoughtless ones to the real hams out here.

I had my first qso via RS-10 satellite. 2m up and 10m down,
very easy to work. The satellite has very sensitive receiver:
5..10 watts to a GP or dipole will do for the uplink (if you
work CW), and almost anything for the receiver antenna.

RS-10 is on low orbit: you can work stations 1000..2000 km away
for a 10-20 minute period during each pass.

Start with learning to find satellite cw beacon on 29.357 MHz,
then tune in to listen some ongoing QSO's on 29.360-400 down-
link band. Next step: transmit on the uplink 145.860-900 MHz
and locate your downlink signal. Then it's time for CQ!

You can make up for a poor uplink antenna by running more power,
but there's only so much a preamp can do for you on receive.
You need a decent 2m CP antenna. A KLM 14C would be the smallest
I'd suggest. If you're building your own, boom length needs to
be about 2.5 wavelengths for adequate performance.

ARR, Henry, and SSB Electronics all offer suitable preamps.
I've used the tiny ARR preamp mounted directly to the feedpoint
of the 2m antenna. The SSB Electronics unit can clamp to the
rear of the reflector on the boom so that only a very short
length of line is needed to the feedpoint. Swing the downlead
out the rear of the antenna rather than lacing it down the
boom to the mast. That'll cause less circularity disruption
and minimize off boresight patterns. RG8X following the preamp
is sufficient feedline for the receiving antenna. The uplink
antenna needs good low loss coax, of course. Belden 9913 is
about the minimum I'd recomend.

The only trouble with this comparison is that you don't need a power
supply with the 736 (I assume that is what the FP700 is). It is built
in the 736.

Rick

Well, you should be quick because in a few months the satellite
will be the problem...

I have worked OSCAR 10 and 13 using a 2x15el crossed yagi on 70cm
and 2x6el crossed yagi for 2m. I used about 30 W max on 70cm.
The signal was not strong, but similar to the beacon.
(that is the correct level, many stations use too much power and
are stronger than the beacon)

>Any suggestions on 2 mtr pre-amp. I realise that the antenna
>system is very comprimised. Jag AA2LJ

I used a homemade preamp with a 3SK97, after a commercial preamp
turned out to be unusable because of too little preselection and
strong local VHF signals causing intermodulation.

It should be possible to make some contacts using your setup. Start
out by listening, and optimize the receive side.
The problem over here often was local QRM. No preamp will correct
that situation. When you are in a quiet environment, it should be
much easier.
Then try to locate your own signal using CW, and make sure it is not
stronger than the beacon.

Rob

set the LIBRARY_PATH env variable in /etc/.profile to the libs.
like

LIBRARY_PATH=/usr/lib:/usr/X11/lib:
export LIBRARY_PATH

Cheers Good luck

Please fill me in...

I am a novice to the amateur radio hobby. I have recently started monitoring local radio, including emergency services, HAM, and air traffic with a basic commercial scanner.(It's a PRO-23 handheld unit, very simple.)

I am particularly fascinated by air traffic radio transmissions, and would like to further my knowledge, and perhaps begin monitoring satellite and manned spacecraft transmissions. I have noticed that many of the postings to this group involve antennas and specific satellites. I also read the recent posting on space shuttle radio frequencies. I notice that many of the freqs are in ranges that my hand-held scanner is capable of receiving... If I find the proper frequencies, can I pull down space shuttle radio transmissions with my scanner? Do I need a special antenna?

I noticed there are amateur rebroadcasts of shuttle radio transmissions. Are other spacecraft or satellites routinely rebroadcast in a manner such that I can receive them with my simple monitor?

What would be involved, in terms of equipment and expense, for a hobbyist to begin monitoring spaceborne radio transmissions?

Thank you for any replies,

Rob

883. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1996-05-02 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4mbcpo$las@blackbird.afit.af.mil>
Source record: 22450

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

>Thank you NR7F!!

>BTW, can anybody tell me the QSL route for Shannon/Mir??

It use to be that a person could make a mir contact with just an HT.
I did it myself quite a few times including on paket. But now with
everyone running 50 plus watts, it's almost impossible to get in on an
HT. With the no code license in effect, people seem to have forgotten
the minimum power rules.
Congradulations on your contact, try it with less power next pass.

Activating Rare Latvian Grid

As part of a 23cm EME experiment by the Latvian Amateur Radio League this summer, grid KO07kn will also be QRV on 6m between July 3rd to the 10th. The QTH is at the recently acquired Ventspils International Radio Astronomy Centre (a former Soviet military site) 22km northeast of Ventspils in Kurzeme province (Courland of Hanseatic League fame). The centre is being refurbished for civilian use by the Latvian Academy of Sciences with the help of the Swedish government. Principal operator will be the immediate past president of the LRAL, Vitauts Klimavicus using "YL3AG". All QSLs should be sent to him directly in Riga:-

V. Klimavicus

John,
Did you really think that these QRM'ers were No code Techs from the
11 meter band ?
It would seem that these operators are seasoned DX'ers
who know how to get thru in a pile up!
Great operating skills they have learned on the hf bands running ssb..
Not quite the same game on FM !
;-)

Check out the Project Spacetrack docs at Tom Kelso's web site. It is
a Tex document, but you can find the FORTRAN listings with a standard
text editor. I used this as the starting point for the SGP/SGP4 models
in WinOrbit. SDP4 and SDP8 are also listed.

>too" flying digital mailboxes, and lack of linear transponders, I find
>personally dissapointing.

You're being more than uncharitable. The choice to go to digital
satellites was driven by a desire to allow low power stations
with simple antennas to fully participate in global satellite
communications, and to take advantage of the launch opportunities
for very small satellites. PSK encoding allows smaller signal
margins than analog encodings, so low power and simple antennas
become practical for the ground stations. And, because of the
very small size and limited power budget of the microsats, use
of digital also allows the satellite to more effectively use
its limited resources to serve the broadest possible range
of amateurs.

Saying that the satellite builders aren't comfortable with
analog transponder techniques flies in the face of Oscar 10
and Oscar 13, built by pretty much the same small group of
people who have brought us the microsats. They certainly
know how to build analog transponders, but chose not to
for the microsats for sound technical (and economic) reasons.

The only trouble with this comparison is that you don't need a power
supply with the 736 (I assume that is what the FP700 is). It is built
in the 736.

Well, you should be quick because in a few months the satellite
will be the problem...

I have worked OSCAR 10 and 13 using a 2x15el crossed yagi on 70cm
and 2x6el crossed yagi for 2m. I used about 30 W max on 70cm.
The signal was not strong, but similar to the beacon.
(that is the correct level, many stations use too much power and
are stronger than the beacon)

>Any suggestions on 2 mtr pre-amp. I realise that the antenna
>system is very comprimised. Jag AA2LJ

I used a homemade preamp with a 3SK97, after a commercial preamp
turned out to be unusable because of too little preselection and
strong local VHF signals causing intermodulation.

It should be possible to make some contacts using your setup. Start
out by listening, and optimize the receive side.
The problem over here often was local QRM. No preamp will correct
that situation. When you are in a quiet environment, it should be
much easier.
Then try to locate your own signal using CW, and make sure it is not
stronger than the beacon.

Rob

Pretty sad, isn't it, Kerwin.

I looked up the three callsigns you posted about, expecting to find
inexperienced refugees from 11 meters engaging in such behavior.
Well, that stereotype didn't hold much water.... All were old enough
to have learned better by now. Two even had higher grade licenses.

The newcomer would be Shannon herself. Let's hope she can see past
the few thoughtless ones to the real hams out here.

Hello, OM,
By now you've probably gotten several messages saying that rs-12 is alive and doing fine. The 10 meter downlink is still loud and clear at my house. They have turned on the 2 meter downlink also, and I believe that you could probably get better reception on that band (haven't tried it yet. I can't comment on STS software.
Hope to work you on rs-12 soon.

896. Mir operating suggestions and thoughts..

Newsgroup: rec.radio.amateur.space
Date: 1996-05-04 00:00:00 UTC
From: dhend@cyberportal.net
Message-ID: <4mge9m$a2q@news.cyberportal.net>
Source record: 22318

Hello to all .
I am Dave N1PPP and have operated Mir under many circustances and in many ways.. there is one clear rule the loudest
signal makes it.. however the person on the Mir station doesn't necessarilly want to talk to the loudest signal. He or she as it is
now has their own set of ideas needs, wants and desires.
I have found most of the crews on Mir get lonely after they have been up there for a month or two, but there are exceptions.
The soviet operating crews tend to be there to do business and only operate the station when and if they really have spare time
and have nothing else constructive to do, the americans, on the other hand try to use the radio to get in touch with friends and
relatives, and to stay in touch with American culture, activities, and interests.
The argumentative comments I have seen in this newsgroup amount to no more than childish tantrums.
Operators can be calling Mir from literally all over the Uninted States and Canada some are in phase and can hear, others are
out of phase and really don't know what is going on, or can't hear who is talking or what they are saying, there is always going
to be competition if an exotic station operates on a single frequency, and Mir is no exception. There are a few stations operating
kansas city trackers with 22 element beams and 600 watt amps and they are going to be heard or at least destroy any
possiblility of a 50 watt station making it through. If two of these powerful stations are competing there is little chance of any of
the smaller stations being heard, and for the good news.. most of the Mir crews like to talk to the little guys so if the big guys
don't get mad and jam the smaller stations (which happens) the Mir operator often calls the weaker signals. I taked to Norm
Thaggard regarding a school contact while at the drive up at a local McDonalds on a 5 watt HT and got my message through
before a local bad operator thought I was talking to Norm (another Ham locally) on the Mir freq and jammed me off. Norm
Thaggard remembered his callsign and never answered his calls.
The only suggestion I can constructively make is to be on your best behavior when you operate Mir behave as you would have
someone else behave. remember if you jam someone else you will get jammed too.
This radio is an important source of enjoyment and entertainment for the Mir crew so do your best to make it enjoyable for them
have something nice ready to tell them, a short joke a quick piece of sports news try to please them and you will be rewarded, I
have been called by Mir by many crews and personally thanked for being there to offer them a little enjoyment in what otherwise
is a rather spartan existance, and you can to.

Get the best antenna setup you can arrange, I built an azimuth elevation rotor from two old tv rotors and use a 13b2 vertically
polarized and generally have been able to make sucessfull contacts with 25 watts. at other times it is impossible to get through
with 150 watts. The conditions vary considerably and the number of people trying varies drastically and when there are a 1000
people putting out 50 watts of qrm each Mir hears nothing except junk, undecipherable and annoying and they shut the radio
off. If you are interested in Mir information and some interesting documents concerning Mir visit my web page at
http://www.cyberportal.net/dhend/dave1.html
I haven't been able to udate it recently but there are some very good up to date links and some messages from U8MIR and a
dissertation by Miles WF1F about conduct on the Mir frequency which is if nothing else informative.
Most Important
if you are not having fun. shut the dam thing off and look for something you can do to have fun..
73 DAVE

897. FS: TNC, Monitor, other stuff....

Newsgroup: rec.radio.amateur.space

I have the following items for sale - cleaning shack:

1. CTX 14" SVGA .28 monitor $95

2. 5 /12, 1.2 floppy drive $10

3. Mouse Systems COM 5 card, w/docs $25

4. AEA PK-88 TNC, w/box, docs $75

5. MFJ Packet/Mic switch for Icom $20

6. 6' Laplink serial cable $5

7. IMSI serial mouse, w/drivers $15

8. 14.4 Data / Fax modem, w/docs $25

9. EIDE controller card $10

10. HMC Super EIDE I/O controller card, docs $15

11. Realtex 256k SVGA card $35

12. Reveal VC200 1/2 meg SVGA card, docs $35

13. 486slc/33 motherboard $15

14. 230 watt power suplly, dual fan $25

Pleas contact Tim Murray KC4YDJ at tamurray@iquest.net, or
(317) 984-2005. Tnx es 73.....

898. Comment 05/04/96 11:58am

Newsgroup: rec.radio.amateur.space

Joe -

Please Post the follwoing ASAP:

The Larkfield Amateur Radio Club ARES/RACES Unit is planning an Amateur Satellite communications demonstration on Saturday May 11, 1996 at the Huntington Town Hall. Setup will begin at 08:30 AM. Huntington Town Hall is located on Route 25A in Huntington, Long Island. This demonstration is open to the public. Amateur radio operators interested in Satellite Communications are especially encouraged to attend.

These demonstrations provide and introduction to Satellite Communications to newcomers and operator proficiency to those already experienced in this aspect of the hobby. Bring headphones with a 0.25" mono adapter if you have them...

Please refer all questions to Ken Ernandes, N2WWD

900. NORAD Two-Line Orbital Element Sets (TLE805)

Newsgroup: rec.radio.amateur.space
Date: 1996-05-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4meere$pte@blackbird.afit.af.mil>
Source record: 22462

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

From: LLEDLOW <LLEDLOW@mailgw.sanders.lockheed.com>
Subject: FT-736R vs TS-790 vs IC-820H

I've used both the FT-736 and TS-790. I own the latter. Ergonomically
it can be a bit difficult to get used to, but it's a good rig. The
FT-736 is very goo, too, and perhaps easier to learn to use. Trouble is,
it's more expensive.

73,

Larry/NA5E

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE805)

The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

John,
Did you really think that these QRM'ers were No code Techs from the
11 meter band ?
It would seem that these operators are seasoned DX'ers
who know how to get thru in a pile up!
Great operating skills they have learned on the hf bands running ssb..
Not quite the same game on FM !
;-)

You're being more than uncharitable. The choice to go to digital
satellites was driven by a desire to allow low power stations
with simple antennas to fully participate in global satellite
communications, and to take advantage of the launch opportunities
for very small satellites. PSK encoding allows smaller signal
margins than analog encodings, so low power and simple antennas
become practical for the ground stations. And, because of the
very small size and limited power budget of the microsats, use
of digital also allows the satellite to more effectively use
its limited resources to serve the broadest possible range
of amateurs.

Saying that the satellite builders aren't comfortable with
analog transponder techniques flies in the face of Oscar 10
and Oscar 13, built by pretty much the same small group of

people who have brought us the microsats. They certainly
know how to build analog transponders, but chose not to
for the microsats for sound technical (and economic) reasons.

The only trouble with this comparison is that you don't need a power
supply with the 736 (I assume that is what the FP700 is). It is built
in the 736.

>for a few months. I can pump in about 70 W on 70 cm.

Well, you should be quick because in a few months the satellite
will be the problem...

I have worked OSCAR 10 and 13 using a 2x15el crossed yagi on 70cm
and 2x6el crossed yagi for 2m. I used about 30 W max on 70cm.
The signal was not strong, but similar to the beacon.
(that is the correct level, many stations use too much power and
are stronger than the beacon)

>Any suggestions on 2 mtr pre-amp. I realise that the antenna
>system is very comprimised. Jag AA2LJ

I used a homemade preamp with a 3SK97, after a commercial preamp
turned out to be unusable because of too little preselection and
strong local VHF signals causing intermodulation.

It should be possible to make some contacts using your setup. Start
out by listening, and optimize the receive side.
The problem over here often was local QRM. No preamp will correct
that situation. When you are in a quiet environment, it should be
much easier.
Then try to locate your own signal using CW, and make sure it is not
stronger than the beacon.

Pretty sad, isn't it, Kerwin.

I looked up the three callsigns you posted about, expecting to find
inexperienced refugees from 11 meters engaging in such behavior.
Well, that stereotype didn't hold much water.... All were old enough
to have learned better by now. Two even had higher grade licenses.

The newcomer would be Shannon herself. Let's hope she can see past
the few thoughtless ones to the real hams out here.

Subject: Questions from a Novice

Please fill me in...

I am a novice to the amateur radio hobby. I have recently started monitoring
local radio, including emergency services, HAM, and air traffic with a
basic commercial scanner.(It's a PRO-23 handheld unit, very simple.)

I am particularly fascinated by air traffic radio transmissions, and would
like to further my knowledge, and perhaps begin monitoring satellite and
manned spacecraft transmissions. I have noticed that many of the postings to
this group involve antennas and specific satellites. I also read the recent
posting on space shuttle radio frequencies. I notice that many of the freqs
are in ranges that my hand-held scanner is capable of receiving... If I find
the proper frequencies, can I pull down space shuttle radio transmissions with
my scanner? Do I need a special antenna?

I noticed there are amateur rebroadcasts of shuttle radio transmissions. Are other spacecraft or satellites routinely rebroadcast in a manner such that I can receive them with my simple monitor?

What would be involved, in terms of equipment and expense, for a hobbyist to begin monitoring spaceborne radio transmissions?

Thank you for any replies,

Rob

set the LIBRARY_PATH env variable in /etc/.profile to the libs.
like

LIBRARY_PATH=/usr/lib:/usr/X11/lib:
export LIBRARY_PATH

Cheers Good luck

>required.

You don't say which satellite you're trying to use. For Oscar 10 and 13,
35 watts and gain yagis should be sufficient to put your downlink signal
equal to the beacon. Does the beacon sound strong to you? If it doesn't,
you may have one of several problems. If you aren't using a mast mount
preamp, you should be. Or there may be a problem with your Rx antenna.
Or you could be off-pointed from the satellite, or using the wrong
polarization sense. If the beacon does sound strong to you, then the
problem is likely high loss cables to your uplink antenna, or a problem
with the uplink antenna itself, or you may be using the wrong polarization
sense. Or it may be that your Tx antenna isn't boresighted with your
Rx antenna.

If you're trying to use one of the LEOs, then 35 watts is *more*
than enough uplink power (5 watts should be sufficient). Again,
troubleshoot as noted above. Make sure you're receiving the beacon
strongly first (typically S9 or so). This will tell you that your
receiving system is Ok. If your downlink signal is still weak
compared to the beacon, then look for loss terms in the Tx feedline
and antenna.

Check out the Project Spacetrack docs at Tom Kelso's web site. It is
a Tex document, but you can find the FORTRAN listings with a standard
text editor. I used this as the starting point for the SGP/SGP4 models
in WinOrbit. SDP4 and SDP8 are also listed.

Hmmm, I think when you receive Oscar 10/13's beacon S9, your transceiver
suffers from S-meter inflation :-)
(but then, most of them do)

Rob

From: LLEDLOW <LLEDLOW@mailgw.sanders.lockheed.com>
Subject: FT-736R vs TS-790 vs IC-820H

I've used both the FT-736 and TS-790. I own the latter. Ergonomically
it can be a bit difficult to get used to, but it's a good rig. The
FT-736 is very goo, too, and perhaps easier to learn to use. Trouble is,
it's more expensive.

73,

Larry/NA5E

Date: 4 May 1996 02:19:26 GMT
From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE805)

The most current orbital elements from the NORAD two-line element sets are
carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

```
